Alphabetical Index

A

Absorbents 944, 982-984
Accessories for gloves 882-883
Accessories for petri dishes 399, 414-416, 422-423
Accessories for ultrasonic units 1503-1504, 1508-1512, 1514-1518
Acid and alkali pumps. 520, 522-527
Adapters 60, 227-229, 233-234, 261, 523, 602-603, 991, 1246-1247, 1251, 1481, 1489-1490
Adhesive films 388, 681-683, 1029
Adhesive mats. 944, 1029
Adhesive slides 445
Adhesive tapes 963-967, 974, 1041-1042, 1575-1579
Aerometers 241
Aids 1423, 1579-1582
Air-flow measuring devices. 1194
Air quality meters. 1139
Ampoules 80, 952, 1033
Analytical balances. 1213-1226
Analytical mills. 1426-1428
Analytical sieve machines. 776-778
Anemometers 1194
Anti-slip mats. 1029-1030
Applicators 425-428
Aprons. 934-937
Assortment boxes 1026-1027
Atomisers. 169, 787-788
Attachments 232, 236, 1431, 1435, 1438
Autoclavable bags. 995-996
Autoclave accessories 1244-1252
Autoclave monitoring. 391-392
Autoclaves. 1244-1248, 1253-1254
Autoradiography 1077
Autosampler vials 84-95, 104, 675

B

Baffled flasks. 51, 409-411
Bags 382-384, 506, 995-998, 1000
Balances 1200-1226, 1229-1230
Barometers 1138
Barrel pumps. 520-527
Barrels 131-132, 134, 988
Baskets 395-396, 1003, 1023, 1025
Bath thermostats 1290-1297, 1300-1302
Batteries 1003, 1083
Beakers 10-17, 182-183
Beta radiation protection 959-962
Bins 132, 134, 988
Blades 481-485
Block heaters. 1314-1317, 1322-1323
Block thermostats 1314-1317, 1322-1323
Body showers 800
Boiling stones 1581
Boss heads 319-322
Bottle-top filter systems. 741-746
Bottles . . . . . 33, 37-48, 50-53, 71, 82-83, 102-104, 131, 140-154, 156-157, 160-163, 165-169, .262-265, 397-398, 407-409, 446, 515, 741
Bottles with conical shoulder 38-40, 156
Bottles with snap-on lid. 90, 98-99
Bowls. 198-199, 268
Boxes. 337, 353-358, 360-363, 386, 854, 981, 1016, 1020-1021, 1023, 1026-1027
Brushes 289-290, 428, 1562-1565
Buckets 133, 200-203, 373, 1002-1003, 1024
Bulb pipettes 615, 620-623
Bunsen burners. 1270-1274, 1276-1278, 1280, 1282
Burettes 329, 542-545
Burner accessories 1283-1284, 1547
Burners 1270-1278, 1280, 1282-1283

C

Cabinets . . . . . 77, 854, 945, 1328-1333, 1336, .1340-1341, 1343-1348, 1351, 1353
Cable ties 385, 1037
Cables 1233
Calculators 1240-1241
Calibration solutions 1159-1160
Calibration weights 1230-1231
Canister pumps. 520-527, 536, 539
Canisters . . 16, 128-129, 134-140, 142, 202, 989, 992, 1289
Capillary tubes 242, 604-605, 787, 1034

Alphabetical Index

Caps 83, 90, 413-414
Carbon dioxide meters 1139
Carboys 140-142
Cast resin 1576
Cell culture bottles 397-398, 403-404, 408
Cell culture plates 402
Cell disruptors 1420-1425
Cell scrapers 399
Cuvettes 424, 433-436
Cellulose 1554, 1556-1557
Centrifugal filter units 739-740
Centrifugal pumps 558
Centrifuge bottles 125-126
Centrifuge glasses 115-117, 123-126
Centrifuge tubes 106, 117-126, 405, 696
Centrifuges 1476-1496
Chairs 1006, 1010
Chargers 1083
Chemical bottles 42-43, 47, 131, 143-144, 152-153, 156, 160, 163, 165-166, 168-169
Chemical protection gloves 897-900, 902-906
Circular filters 766-767, 770-771, 773
Circulating thermostats 1290-1303
Clamps 222-224, 317, 319, 322-326, 495-496, 595, 697, 1040, 1409
Cleaning agents 1516-1532, 1544-1548, 1575
Cleansing lotions 869-871
Clear lubricants 1568-1573
Clips 110, 224, 327, 697, 796, 1040
Clock timers 1234
Clocks 1234, 1237-1240
Closing pliers 97-98
Closure seals 510
Coffee machines 1288
Cold compresses 948
Cold light sources 1059-1061
Cold protection gloves 916-917
Collecting trays 192-195, 991-993, 1543
Collection containers 984-989, 991-995, 1001-1003
Colony counters 423-424
Columns 238
Combi-shakers 1438, 1440, 1444, 1447, 1453
Combi-stands 336, 344
Compact balances 1200-1201, 1205
Components with ground glass joint 227-231
Compresses 948
Conductivity meters 1180-1185, 1188-1190, 1192-1193
Connecting pieces 597-600
Connectors 59-60
Constant temperature baths 1291-1297, 1301-1302, 1304-1305, 1310-1313
Contact thermometers 1394
Containers 172, 448, 452, 854, 985-987, 994, 1021-1024, 1026-1027
Coolers 220, 237-239, 369, 1298-1299
Cooling bags 374-375
Cooling boxes 353-355, 357-358, 360-363, 365-370, 372, 374-375
Cooling incubators 1337-1340
Cooling packs 365-370, 372, 375-376
Cotton buds 425-426
Cotton containers 270
Cotton stoppers 412
Cotton swabs 425-426
Cotton wool 619, 1561
Counters 424, 1198
Counting chambers 437-439
Cover films 387-390, 681-683
Coverslips 439-442, 456
Crimp caps 83, 89-90, 95
Crimping tools 97-98
Crucible tongs 326, 330-331
Crucibles 260, 279-282
Cryogenic vessels 179, 350, 352-355, 357-358, 360-363, 376-380
Cryogenic vials 179, 703-705
Crystallising dishes 270-271
Culture bottles 71, 397, 407-409
Culture flasks 409-411
Culture media bottles 398, 407-409
Culture tubes 105, 107, 404-405, 407
Cut resistant gloves 907-913, 919, 922
Cutters 1031
Cutting instruments 481, 483-485, 488, 593, 1030
Cuvette stands 433, 435-436
Cylinders 22-27, 269, 425, 1142

Alphabetical Index

D

Data loggers 1113-1114, 1116-1123
Deep freezers 1257, 1261-1263, 1265, 1267
Density measuring instruments 1140-1142
Descalers 1546
Desiccators 72-79
Detergents 1544-1545
Dewar containers 376-380
Dialysis accessories 796-797
Dialysis membranes 789-794
Dialysis systems 795-796
Digestion vessels 1255-1256
Digital thermometers 1098-1099, 1101-1103, 1105-1110, 1123-1125
Dishes 173, 189-192, 196-197, 199, 230, 268, 270-272, 275-277, 285-286, 288, 416-421, 448, 454
Dishwasher cleaners 1522-1525, 1531-1532
Disinfectants 870, 872-875, 1533-1543
Disinfection wipes 875, 1540-1543
Disintegrators 1420-1422
Dispenser pipettes 633-637
Dispensers 60, 527-541, 869, 876-878, 880-882, 944, 950-951, 1539
Dispersion balls 1582
Dispersion units 1416-1419
Disposable gloves 883-884, 887-891, 893-895
Disposal bags 961, 995-1001
Dissecting needles, probes 498-500
Dissecting scissors 489-492, 494
Dissecting sets for anatomy 309, 473, 476, 501-503
Distillation 231-236
Distillation apparatus 231-236
Double boss heads 319-321
Double spatulas 296, 300, 303-306, 308, 311, 499
Double spoon 299-300, 499
Drainage systems 187-188, 194, 337
Drawer inserts 1028
Driers 1227-1228, 1287
Drigalski spatulas 399, 422-423
Drip pans 189-191, 193, 198-200, 992
Dropper bottles 151, 153, 167-168, 181
Dropping funnels 247-248
Dry ice machines 381
Drying ovens 77, 1343-1351, 1353
Drying tubes 241
Dust masks 846-847, 851
Dustpan sets 1566

E

Ear plugs 856-859
Ear protection plugs 856-859
Ear protectors 859-860
Earmuffs 838-839, 860-861
Electrodes 1162-1173, 1181, 1183, 1185
Embedding cassettes 459-461
Emergency showers 800
Engraving tools 1034-1035
Erlenmeyer flasks 17-21, 409, 411
Escape hoods 853
Evaporating dishes 275-278
Exchangeable blocks 1314, 1318-1320
Exsiccator accessories 72-74
Extraction 239-240
Extraction sleeves 774-775
Extraction systems 581-582, 750, 957-958
Extractors 239-240
Eye protection 801-833, 836-833
Eye showers 801-804
Eye wash bottles 804-808
Eyewear 811-833

F

Fabric gloves 908, 910, 914-915
Face shields 836-839
FFP masks 842-847, 850
Fibre-optic cables 1059-1061
Films 387-390, 683, 1077
Filter adapters 261
Filter crucibles, funnels 219, 259-261, 279-280
Filter papers 766-774, 1560-1561
Filter tips 662, 666-669
Filter units 736-739

Alphabetical Index

Filters 759-760, 848, 850-851
Filtration units 263, 741-750, 752, 957
Fine dust masks 842-844, 846-847
Fire blankets 953
Fire extinguishers 953-954
Fire protection 853, 953-954, 975
First aid 945-953
First aid boxes 945-953
Fittings 596-599, 601
Flake ice makers 1267-1269
Flask accessories 332
Flask stands 225
Flasks 17-21, 27-31, 204-218, 409, 411
Flasks with ground glass joint 206-218
Flat bottom flasks 204-205
Flocculation units 1415-1416
Floor mops 1565-1566
Flow measuring devices 1112, 1194, 1198
Foot protection 940-943
Forceps 97, 326, 329-331, 486, 1035, 1039
Freezers 1257, 1261-1265, 1267
Freezing boxes 353-355, 357-358, 360-363
Fume cupboards/work stations 957-959
Funnels 245-247, 249-255, 257-258, 284, 745, 988, 990, 994

G

Gas-leak testers 506, 1579
Gas burners 1270-1280
Gas cartridges 1273, 1275, 1283
Gas handling 506-507
Gas lighters 1283
Gas wash bottles 264-266
Glass bottles 35-53
Glass components 220, 227-229, 231-234, 237, 239, 244
Glass cutters 1033-1035
Glass stopcocks 242-243
Glass vials with rolled rim 89-90, 94, 98-99
Glass, quartz fibre filters 764-766
Gloves 883-885, 887-922
Glues 1575-1579
Gowns 923-925, 927, 932
Graduated pipettes 615-620
Griffin beakers 14-15
Grinding dishes 272-275

H

Half masks 849, 851-852
Hand-held counters 1198
Hand creams 862, 864-868
Hand sanitizers 870, 872-874
Hand scoops 291, 293-295
Hand towel dispensers 878-881, 1556
Hazard warning symbols 963, 973, 975-981
Head and face protection 836-839
Hearing protection 839, 856-861
Heat baths 1305, 1310
Heat indicators 1086
Heat protection gloves 918-922
Heat thermostats 1290-1297, 1300, 1302
Heater and magnetic stirrers 1381-1385, 1387-1393
Heaters 1270-1274, 1288, 1354, 1364, 1366-1367, 1369-1370
Heating baths 1303-1305, 1310-1313
Heating lines 1354-1355
Heating mantles 1357-1361
Heating thermoshakers 1317-1320, 1322-1323
Heating thermostats 1290-1297, 1300, 1302
High-pressure autoclaves 1244-1248
High-temperature greases 1569-1570, 1572-1574
Histology, pathology devices 1362-1363
Holders 246, 256, 326, 329, 332, 386, 1556
Hole punches 1035
Homogenisation systems 1416-1419
Homogenizers 429-432, 1420-1425
Hoods 853, 937-938, 944
Hose accessories 385, 593-599, 602, 797, 1037
Hose connectors 596-602
Hose membranes 789-794
Hoses 583-592
Hot air guns 1286-1287
Hot glue guns 1577
Hot plates 1365-1370

Mixer, stirrer and temperature control units. 1474
Mixers 1402, 1405, 1407-1408, 1423-1424,
. . . . . 1426-1429, 1432, 1462-1463, 1469, 1471-1475
Mixing barrels 131
Mixing beads. 1582
Mixing devices 1371-1375, 1377-1379, 1382, 1385,
. . . . . .1387-1388, 1390-1391, 1393, 1420-1422,
. . . . . 1429, 1433, 1438-1440, 1442-1445, 1447,
. . . . . 1450-1460, 1463-1467, 1469, 1471-1475
Moisture analysers 1227-1229
Monitoring equipment 1198-1199
Mortars 272-273, 275, 430-431
Muffle furnaces 1352
Multi-channel pipettes. 642, 645, 649, 651
Multi-position magnetic stirrers 1377, 1379-1382
Multi-purpose vacuum cleaners 1567-1568
Multi-socket outlets 1232-1234
Multimeters 1187-1190, 1192-1193
Multiple distributors. 61-63, 67-71, 142
Multiple distributors for bottles 61-63, 67-71, 142

N

Needles. 426-427, 496-498, 500, 551, 554, 556
Nitrile gloves 887-891, 893-894, 900, 902, 904-905
Nitrogen tanks. 376-380
NMR tubes 99-100
NTC temperature sensors 1103-1106, 1108, 1110-1112,
. . . . . .1115, 1118, 1122, 1135, 1199

O

Occupational safety 804-808, 835, 853-854,

. . . . . .953-954, 959-961, 975
Office chairs 1006-1010
Office cleaning products. 1551
Office organisation 1041-1042
Oil binders. 983-984
Openers 80, 1033, 1039-1040
Opening pliers. 97-98
Orbital shakers 1437-1440, 1444-1445, 1447-1448,
. . . . . 1450-1453, 1455-1460, 1467, 1473-1474
Organisational aids 1026-1028
Outdoor thermometers 1095-1098
Ovens 1328-1336, 1341, 1343-1351, 1353
Over glasses 816-818, 832
Overalls 928-932
Overhead mixers. 1468-1475
Overshoes. 940-944
Oxygen meters 1186, 1189

Alphabetical Index

P

Pads 187, 193, 501, 768, 1029-1030, 1559, 1561
Paraffin baths. 1363
Particle masks 842-853
Pasteur pipettes 605-612
Pathology equipment 105, 107, 182, 184-187
Pens. 1043-1045
Peristaltic pumps. 563-565
Pestles. 272-274, 428-430
Petri dishes 416-421, 425
pH electrodes 1162-1173, 1181, 1183, 1185
pH meters 1160-1163, 1166, 1173-1179, 1189
pH papers 1155-1158
pH testers 1160-1161
pH/mV/°C meters 1173-1179, 1188, 1192-1193
Photometers 1153-1154
Pipette accessories. 394, 631-632, 1028, 1516
Pipette controllers 624, 627-629
Pipette stands 631-632, 653-654
Pipette tips. 655-669
Pipettes 605-606, 612-623, 638-640,
. . . . . 644, 646-647, 651-652
Plasters 949-952
Plugs 95, 111-114, 118, 221-222, 227,
. . . . . .413, 856-859
Plunger pipettes 637-638, 646-647
Pluviometers 1137
Pocket balances 1200-1203
Pocket calculator. 1240-1241
Pots 200
Pouring rings 41, 54-55
Precision balances 1200, 1202-1212, 1218-1219,
. . . . . .1221-1223, 1225-1226
Precision linen testers 1070
Precision thermometers. 1090, 1092-1094, 1102-1103,
. 1105-1107
Precision tweezers 462-470
Preformed masks 842-843, 846-847, 851
Preparation accessories 292, 499-501, 1037
Pressure meters 1138
Pressure reducers. 507
Probes. 498-499
Propane gas burners. 1270-1274, 1277-1278
Protective clothing. 928-943, 947
Protective gloves 883-885, 887-922, 940
Protective suits 928-932
Pumps 514, 520-527, 558-567, 569-574, 578, 583
Pycnometers 32

Q

Quadrupod stands 1284
Quartz clocks 1235-1239
Quick tests. 1144, 1146-1149

R

Racks. 33, 188, 334, 336-337, 341, 343-363, 372, 676
Radiation protection containers 961-962
Radiation protection screens. 959-961
Radio wall clocks. 1239-1240
Radio weather stations 1136-1137
Rain gauges 1137
Reaction vial stands 333, 346-351, 356, 358, 372
Reaction vials 179, 686-705
Reagent reservoirs 670-673, 696
Recirculating coolers. 1291, 1293, 1295, 1298-1303
Refractometers 1079-1082
Refrigerated containers. 366, 373-375
Refrigerating thermostats 1298-1303
Refrigerators 1257-1260, 1263-1266
Respiratory filters. 848, 850, 853
Respiratory protection accessories. 854-855
Respiratory protection masks 841-853
Rocker shakers 1430-1452, 1457, 1460,
. . . . . .1463-1468, 1473-1474
Rockers 1463-1467
Roller mixers 1430-1452, 1457, 1460-1463
Rotary evaporators 1324-1327
Rotary pumps 572-574
Rotators. 1468-1475
Rotors 1480-1484, 1489-1491, 1493-1494, 1496
Round bottom flask stands 225
Round bottom flasks 206-208, 210-215, 217-218
Rubber bulbs. 624-626

Alphabetical Index

S

Safety cabinets 954-958
Safety containers. 127-131
Safety gloves 884, 907-922
Safety knives 485, 1031
Safety spectacles 811-833
Safety spectacles accessories 834-836
Sample bags 382-385, 1424
Sample spoons 295-296, 312, 516-517
Sample trays 180, 268-270
Sample vessels 102, 171-187
Sample vials 49, 82-86, 88-95
Samplers 292-295, 507-519
Scalpels. 480-485
Scintillation vials 102-104
Scissors. 486-494, 595, 1033
Scoops 291-294, 513, 515
Screw caps 33, 36, 41-42, 54-60, 84-86,
. . . . . 88, 91-95, 141, 164
Screw top bottles. 42-48, 50-51, 84-86, 88, 91-96
Scrub sponges 1562
Sealants. 1568-1574, 1578
Sealing films 681-683
Seals 58-59, 226, 243, 1244-1248, 1574, 1578
Seals with ground glass joint. 226
Sedimentation vessels. 34, 256
Separating funnels 243, 245-246
Septa 58, 82-86, 88, 91-95
Sets of instruments 502-503
Sets of weights 1230-1231
Shakers 1422, 1430-1434, 1436-1445,
. . . . . .1447-1460, 1462-1468, 1470
Shaking water baths 1312-1314
Shipping containers
for microscope slides 447-448, 450-452
Shut-off valves. 596-602, 1244-1247, 1249
Sieve machines 776
Sieves 290-292, 403, 773, 777-778
Signal timers 1234-1237
Single-rod measuring cells 1162-1173, 1181, 1183, 1185
Single-use pipettes 607-608, 610-614
Skin care 862-868, 870
Skin cleansing 869-873
Skin disinfection 865, 868, 870, 872-875
Skin protection. 862-875
Sleeves 226, 775, 939-940, 1482
Slide folders. 449-450
Slide rules 1036
Slide storage 448-452, 458
Small balances 1200-1201
Small benchtop centrifuges 1476-1478, 1480,
. . . . . 1483-1484, 1486-1489, 1491
Small parts containers. 1026-1028
Small shakers 1430-1434, 1436, 1438, 1440,
. . . . . 1443, 1447, 1452-1453, 1460
Soap dispensers 871, 876-878
Socket outlets 1232-1233
Soldering devices 1272-1274
Solvent absorbers 982-984
Solvent labels 981
Solvent pumps. 524-525
Sound level meters 1197
Spatulas. 101, 296-297, 300-312, 422,
. . . . . 443, 499, 1401
Special papers 1059, 1559-1560
Sponges 460, 1562
Spoon spatulas 296-297, 299, 301-303, 312
Spoons 292, 295-302, 499
Spot plates 279, 446
Spray bottles 169-170
Sprays 1548-1550
Stabilising rings. 332
Staining plates. 446
Staining racks, boxes 446, 453-458
Stand clamps 317, 322-329, 1409
Stand material 316-319, 1409
Standard tweezers 467-480
Standing support. 1009-1010
Stands 333, 335-337, 341, 344, 346, 350, 353,
. . . . . .362, 372, 433, 435, 632, 653, 996, 999
Steam sterilisers 1253-1256
Stepladders. 1010-1011
Steps 1010-1011
Stereo microscopes 1048-1051, 1054
Sterilisation 391-395

Alphabetical Index

Sterilisers 1253, 1281-1282, 1343-1346, 1351
Sterilising containers 394-396, 480, 503
Sterilising stations 1279, 1281
Stirrer accessories 1410-1414
Stirrer reactors 71
Stirrers 71, 100, 311, 1371-1385, 1387-1388, 1390-1391, 1393, 1400-1408, 1411, 1414
Stirring magnets 1244-1247, 1394-1400
Stirring rods 100-101, 311, 1244-1247, 1394-1401
Stools 1007-1010
Stop clocks 1238
Stopcocks 135, 243, 595, 601-603
Storage boxes 355-357, 359-363
Storage containers 81, 172-173, 334, 353, 356, 358-362, 450-452, 458, 835, 854-855, 1026-1028
Storage systems 1026-1028
Suction aids 624-627
Suction bottles 262-263
Surface disinfectants 875, 1535-1543, 1551
Swabs 270, 950, 952
Syringe filters 708-735, 737
Syringes 547-550, 552-557

T

Tachometers 1197
Temperature control plates 1366-1367, 1369-1370
Temperature control shakers 1454-1459
Temperature control thermostats . . . 1290-1298, 1300, 1302
Temperature controllers 1394
Temperature indicators 1086
Temperature measuring devices 1087, 1089-1091, 1096-1099, 1101-1115, 1117-1119, 1122-1125, 1128, 1135, 1199
Temperature monitors 1199
Tempering units 1328-1330, 1332-1333, 1336, 1347-1348
Test solutions 1159-1160
Test systems 773, 1143-1153
Test tube racks 337-343
Test tube shakers 1430-1434, 1436, 1440, 1447, 1450
Test tubes 104-105, 107-110, 121, 182, 185, 187
Test weights 1230-1231
Thermohygrometers 1126, 1128-1136
Thermometers, analogue 1087-1094
Thermometers, digital 1095-1102, 1104-1112, 1134
Thermos jugs 1289
Thermoshakers 1317-1320, 1322-1323, 1327
Thermostats 1290-1303, 1317, 1322-1323
Thrombocyte counting 437-438
Tilt/roller mixers 1460-1462
Timers 1234-1238, 1240
Tins 171-181, 184, 269-270, 283, 447, 1027
Tissue culture devices 423-424
Titration equipment 542-547
Tools 1035-1039
Torches 1073-1076
Transfection 424
Transilluminators 1078
Transmitted light microscopes 1049, 1052-1055
Transport castors 1012, 1014-1017, 1019-1020
Transport containers 1020-1025
Transport trolleys 1012-1013, 1015-1018
Tripods 1283, 1358-1359
Trolleys 1014-1020
Tubes 676, 686-705
Tubs 193-195, 199, 268, 373, 1019, 1543
Tweezers 462-480

U

Ultrapure water systems 778-786
Ultrasonic cleaners 1516-1518
Ultrasonic disintegrators 1420-1422
Ultrasonic units 1498-1503, 1506-1509, 1511-1514, 1516
Universal cleaning agents 1518-1525, 1532, 1545

V

Vacuum cleaners 1567-1568

Future, sustainability and **innovation** at the heart of **CARL ROTH.**

Managing Director
André Houdelet

A challenging year lies behind us as we look forward into the new business year 2022 with drive and optimism. The pandemic has challenged us all; we must be ready to adapt to the situation at any moment and to react immediately to any new developments, so that we can serve you as quickly and reliably as ever. The satisfaction of our customers and staff is always our top priority. This is why we continually optimise our range, designing it to suit you.

This year, we will continue to offer you catalogues in both digital and physical formats, as well as special offers. We have divided our catalogue into two sections to help you find the products you need even more quickly and easily: Life sciences/Chemicals, and laboratory equipment. You can choose from an extensive range of chemicals and life sciences products.

Total product portfolio 2022/2023

As always, you will find a wide variety of existing and new products to make your everyday work easier. If you require suitable laboratory equipment, simply take a look at our new laboratory equipment catalogue.

What‘s more, our online shop is always available and well-stocked; here, you can purchase your products efficiently and easily. Our ordering processes are designed with you in mind. It offers a wealth of information, documents, images and videos on many of our products. In addition, we are more than happy to provide you with individual support and are here to help whenever you need us.

We would like to take this opportunity to thank you for your loyalty and ever-successful cooperation. We look forward to remaining your reliable partner in the laboratory equipment and chemicals sector this year.

Kind regards,
André Houdelet

Your partner for high-quality performance

With 5 plus points to your advantage:

Quality

All products in the ROTH product range are subjected to strict in-house checks. This enables us to ensure you receive consistently high product quality.

Logistics

Direct dispatch! Delivery fast, simple and reliable!

Special rates & Discount

Fair and calculable, i. e. a quantity discount of 5 % from 6 packs and 10 % from 24 packs of same items will be granted. Please check with us for special rates on bulk amounts or standing orders.

Customer advice

Customer proximity and competence, i. e. we are here to advise you before and after buying.

Returned & Take-Back Goods

You can take advantage of our 10-day exchange and take-back guarantee. Just send the goods to us in their original packaging together with a copy of the invoice or delivery note and your modified order. We are unfortunately unable to pay the costs for postage and packing. We request you to get in touch with us for any legitimate complaints which require goods to be returned. We shall then authorize our forwarding agent immediately to pick up the goods in question. In the event of goods being returned independently and without prior notice, postage and packing costs can only be refunded for the same amount as agreed upon with our forwarding agent. Further information on returning goods can be found in the terms of sale and delivery at the back of this catalogue.

Discover the **CARL ROTH** webshop.

Comprehensive product information, recommendations, images, videos, certificates of analysis, special offers and the most up-to-date prices are available at www.carlroth.com.

www.carlroth.com

A private enterprise with tradition

Best service for 143 years

1879

CARL ROTH is established as a “material goods, colonial goods and dyes merchant and chemists” in Karlsruhe.

1891

CARL ROTH is appointed as an “official purveyor to the Grand Duke of Baden“.

1899

ROTH publishes its first sales and mailorder catalogue.

1907

CARL ROTH operates the first delivery van in Karlsruhe.

1928

The laboratory chemicals department opens.

Quality, Environment, Safety

We take responsibility

Our QM system celebrated its 25th birthday in 2020. Over this time, we have continuously adapted our QM system to the growing market demands in order to meet quality requirements and to continue to deliver a high standard of quality.

CERTIFICATE

The Certification Body
of TÜV SÜD Management Service GmbH
certifies that

Carl Roth GmbH + Co. KG
Schoemperlenstraße 1-5, 76185 Karlsruhe
Germany
An der Mole 5, 76187 Karlsruhe
Germany

has established and applies
a Quality and Environmental Management System
for the following scope of application:

Development, production and distribution of labware and chemicals.

Performance of audits (Order No. 70001407)
has furnished proof that the requirements under:

ISO 9001:2015
ISO 14001:2015

are fulfilled.

The certificate is valid from 2019-07-06 until 2022-07-05.
Certificate Registration No.: 12 100/104 20247 TMS.

Product Compliance Management
Munich, 2019-06-27

The guiding principle for an environmentally conscious corporate management has always been a fundamental part of our business conduct. In addition to fulfilling our statutory environmental commitments, therefore, we always strive to define environmental protection targets and to optimise our operating procedures taking into account environmental aspects.

Our certified environmental management system helps us to systematically pursue this aim.

By participating in the *Responsible Care*® programme of the chemical industry, we have undertaken a commitment to meet the goals set by the programme.

These goals are to promote sustainability, to show product responsibility, to ensure safety, to improve health protection in the workplace and to better protect the environment.

Innovative use of combined heat and power technology when printing this product reduced CO_2 emissions by up to 52% in comparison to conventional methods in Germany.

minus 52% CO_2

SOLVAGREEN® - Green Solvents
Our brand for alternative solvents

Green Solvents serve as an alternative for environmentally hazardous and harmful reagents, and thus contribute to risk minimisation.

1945

The highly efficient manufacturing and bottling department enters service.

1958

ROTH unveils its proprietary high-pressure laboratory autoclaves at the ACHEMA Fair.

1971

ROTH is awarded a patent on its Mercurisorb-ROTH® high-speed mercury absorber.

1989

The „Association of Independent Businesses“ presents its award to ROTH in recognition of its environmentally friendly business practices.

1990

CARL ROTH publishes its first general product catalogue for its Labware, Life Science and Chemicals product lines.

Plastics – Technical data / Key to symbols

What about the packaging material?

We are making our contribution to the environment:

- By trying to use as little packaging material as possible. Unfortunately we cannot do without packaging completely as it has the important function of not only protecting the product, but also man and environment from any harm.

- By using environmentally friendly and recyclable packaging material as far as possible. As early as the beginning of the 80s, we stopped using polystyrene inserts for packing solvents, acids and alkaline aolution. We now use special boxes for hazardous goods made of 100 % recyclable corrugated cardboard. Paper is used as stuffing material.

Please also help by putting the **packaging in the recycling container after use**. Our boxes are labelled with the recy-symbol; they can be easily stored when cut open and pressed together without taking up much space, prior to being put out for recycling.

Our **plastic containers made of polyethylene (PE)** can also be turned in for recycling after they have been completely emptied and cleaned of all harmful substances.

The same applies to **tin flasks and canisters** once emptied and pollutent-free.

Sterilizing plastics – Autoclaving

Recommended autoclave cycle:
20 minutes at 121 °C, 1 bar

1. Clean autoclave goods thoroughly prior to sterilizing.
2. Rinse off used detergent with distilled water.
3. Unscrew caps to enable pressure compensation.
4. Only autoclave containers with stop-cock when empty, screw off stop-cocks.

   Following plastics can be autoclaved repeatedly: ETFE, PFA, PTFE, FEP, E-CTFE, PMP/TPX®, PP, SI, PVDF; PES, PSU

Note:
Polycarbonate PC and Polysulfone PSU are also autoclavable, however this reduces the mechanical stability. This can result in material failure particularly when under high mechanical strain, e.g. during centrifuging.

Please contact us should you have any further questions regarding packaging.

1993

Construction of a modern high-bay warehouse.

1995

First certification of the quality management system to DIN EN ISO 9001.

2005

The chemicals department moves into modern premises on the Karlsruhe-Rheinhafen industrial estate.

2013

An extension with an automated small parts warehouse is added to the Chemicals and Life Science building, enlarging its area to approx. 8,000 m². CARL ROTH now stocks over 21,000 products in its warehouse.

Abbreviations / temperature resistance of plastics

DIN-Abbrev.	Description	Application temperature (°C)		
		from	to	
ABS	acrylonitrile butadiene styrene	-40	+85	(+100)

PVC	polyvinyl chloride	-20	+80	
PVDF	polyvinylidene fluoride	-40	+105	
SAN	styrene acrylonitrile	-20	+85	(+95)
SI	silicone rubber	-50	+180	
TPE	thermoplastic elastomer	-50	+121	

Temperature in ( ) short-term

All data in this table are approximate data and refer exclusively to raw plastic products; they can therefore only be regarded as indicative recommendations. As the temperature resistance may vary with different conditions of manufacturing or chemical influences, suitability tests by the user are highly recommanded.

No legal claims can be derived from this information; nor do we accept any liability for it.

All products identified as being particularly temperaturesensitive are shipped **in special ice boxes with freezer packs or in dry ice.**

ROTH for Future
Products, with optimised manufacturing process in terms of sustainability.

2014
Succsesfull participation in the ECOfit programme sponsored by the state of Baden-Württemberg.

2014
Participation in the Responsible Care® programme.

2015
Relaunch of the new ROTH Online Shop.

2016
Certification of the corporate environmental management system according to ISO 14001 for the sustainable environmental protection.

2019
140th anniversary of CARL ROTH.

2020
Opening of the third plant with new logistics centre and automatic small parts warehouse and approx. 7,000 m² of additional storage space.

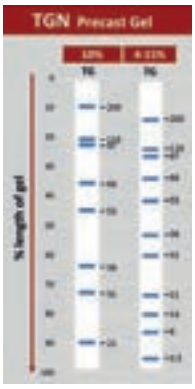
Q-PAGE™ Precast Gels

ready-to-use



- **Compatibility** – gel cassettes with the sizes Mini (10 x 8.3 cm) and Midi (10 x 10 cm), suitable for most mini-gel tanks
- **Easy to load samples** – numbered wells with separators
- **Exceptionally fast separation** – clear, sharp bands already after 30-40 minutes
- **Gel cassettes with comb** to protect the gel pockets“

TGN (**T**ris-**G**lycine **N**ovel) Precast Gels are ready-to-use acrylamide gels for SDS-PAGE running in Tris-Glycine buffer system. With unique formula, TGN Precast Gels perform enhanced resolution, sharper bands, and longer shelf life as compared with conventional Laemmli Tris-HCl gels. The protein migration patterns in TGN series, however, are similar with typical Laemmli Tris-HCl gels, and thus TGN Precast Gels are compatible to traditional SDS-PAGE and subsequent analyses.

- **Particularly long shelf life** – up to 12 months from date of manufacture when stored at 4 °C
- **Wide separation range** – available as homogeneous and adjusted gradient gels
- **Easy to monitor during the run** – transparent reference lines on the gel cassette
- **Solid blister tray** – for safe transport of the gels“

PAGE Precast Gels

Compatibility:

Q-PAGE™ TGN Mini (10 x 8,3 cm):
- Bio-Rad® Mini PROTEAN® Tetra Cell
- Chambers of similar size of other manufacturers

Q-PAGE™ TGN Midi (10 x 10 cm):
- Roth PROclamp Mini (Art. No. 3501.1–3503.1)
- Roth Mini Vertikal (Art. No. Y001.1–Y004.1)
- Invitrogen® XCell SureLock® Mini-Cell
- Invitrogen® Mini Gel Tank
- Hoefer SE260
- Chambers of similar size of other manufacturers

Q-PAGE™ Precast Gels

Gels are supplied shrink-wrapped in Tris/Glycin buffer, without SDS (preserved).

Product name	Type	Instructions for use	Gel strength	Volume per pocket	Art. No.	Pack Qty.	€

For additional product data and safety information, see chapter Chemicals A–Z.

Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**

Additional costs resulting from such, **will be invoiced** (further information on request).

Please note: In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

Storage temperature: +4 °C
Transport temperature: cooled

ROTIPHORESE® Acrylamide Ready-Made Solutions

Safe

Acrylamide ia a strong nerve poison which has clearly proved to be carcinogenic and to change the genetic make-up during animal testing. Acrylamide is resorbed primarily through the skin. The formation of dust when working with the solid matter is particularly critical. A hazard which can be easily avoided by using the ROTIPHORESE® ready-to-use solution.

Superior quality

ROTIPHORESE® Acrylamide and -Bisacrylamide solutions from Carl ROTH have the highest purity level. They are produced from substances free from acrylic acid. Oxidation products are removed from the solution by a selective absorption process. A new formation of such and/or polymerisation of the solution is prevented by gaseous stabilisation of the solution.
In order to guarantee a high consistency of our ROTIPHORESE®-solutions, each batch undergoes electrophoretic testing.

Ready-Made Solutions Acrylamide/ Bisacrylamide-Mix

ROTIPHORESE®Gel solution

PAGE gel solutions, Gel solution

Ready-to-use, gas-stabilized ready-to-use acrylamide solutions with different concentrations and ratios of acrylamide to bisacrylamide. The ROTIPHORESE® gel solutions are very easy to use and enable reproducible and high-resolution gel electrophoresis.

Directions for use

ROTIPHORESE® gel solutions can be used for protein and nucleic acid separation in PAGE gels. The high-purity solutions can be combined with any buffer system. During sequencing, they facilitate the preparation of sequencing gels of consistent quality; our fluorescence-free gel solutions are recommended for the use of automatic sequencers.

Please note

The ROTIPHORESE® acrylamide and bisacrylamide solutions from Carl ROTH are produced only from acrylic acid-free substances and are strictly controlled in acrylamide content and pH. Oxidation products are removed from the solution by a selective absorption process. Their new formation and the polymerization of the solution are prevented by stabilizing the solution with inert gas.
In order to ensure a high lot-to-lot consistency of our ROTIPHORESE® solutions, each batch is subjected to an electrophoretic test.
Fluorescence-free gel solutions are tested for suitability for automatic sequencers.

ready-to-use

ROTIPHORESE®Gel 30 (37.5:1)

ROTIPHORESE® 30 %, ready-to-use, gas-stabilized

Acrylamide and Bisacrylamide Stock Solutions

PAGE solutions are always a mixture of acrylamide and bisacrylamide. Acrylamide forms linear polymers, whereas bisacrylamide crosslinks these linear polymers forming pores of a special size. The pore size may be altered by varying the total gel concentration (% T) and the percentage of the crosslink (% C).
With the ROTIPHORESE® stock solutions the desired T/C rate can be produced. You need an acrylamide stock solution (Gel A or Gel A-40) and a bisacrylamide stock solution (Gel B).

For detailed instructions regarding gel preparation with ROTIPHORESE® Gel A, A-40 and B please see user manual and technical information brochure “PAGE Instructions”.

ROTIPHORESE®Gel A

ROTIPHORESE® 30 %, gas-stabilized

Aqueous acrylamide stock solution for preparation of protein gels in combination with ROTIPHORESE® Gel B.

Directions for use

Ready-to-use, stabilised 30 % acrylamide stock solution. In combination with ROTIPHORESE®Gel B (2 % bisacrylamide stock solution, Art. No. 3039) gels with up to 20 % total acrylamide concentration can be produced.

For detailed instructions regarding gel preparation with ROTIPHORESE®Gel A, A-40 and B please see our Technical Information Brochure “PAGE Instructions”.

Gels with up to 20 % total acrylamide concentration can be produced.

Storage temperature: +4 °C

General technical information

ROTIPHORESE®NF Ready-to-Use Solutions for Automated Sequencing

ROTIPHORESE®NF ready-to-use solutions for automated sequencing **are special fluorescence-free acrylamide/bisacrylamide mixtures** of highest quality as required for automatic sequencing.
Made from 4x cristallised acrylamide.

ready-to-use

ROTIPHORESE®NF-Acrylamide/Bis-solution 30 (29:1)

ROTIPHORESE® 30 %, ready-to-use, gas-stabilized, fluorescence-free

Aqueous acrylamide and bisacrylamide stock solution at a ratio of 29:1 for PAGE and DNA sequencers.

Cross linking 3,3.

ROTIPHORESE®NF ready-to-use solutions are made from 4x crystallized acrylamide and are special fluorescence-free acrylamide/bisacrylamide mixtures of the highest quality, as required for automatic sequencing.

Analysis of proteins/peptides <30 kD, DNA oligonucleotides and long-run DNA sequencing. Cross linking 3,3.

Storage temperature: +4 °C

Ready-Made Solutions for Manual Sequencing

ROTIPHORESE®DNA sequencing system

Sequencing gel solutions, Gel solution

- For preparation of 4–20 % sequencing gels
- Most simple handling of three optimised ready-to-use solutions
- No tedious dissolving of urea
- Prevents acrylamide dusts
- Reproducible, superior quality of gels
- In tried-and-tested ROTIPHORESE® quality

Convenient set containing three ready-made solutions for easy and fast casting of sequencing gels. Solutions are produced in ROTIPHORESE® quality and are perfectly matched – providing superior, reproducible quality and high sequence resolution.
In addition, the ROTIPHORESE®Sequencing system allows flexible adaptation to the desired gel variant, so that the amount of urea can be varied in addition to the acrylamide concentration. By using the ROTIPHORESE®Sequencing gel buffer concentrate and ROTIPHORESE®Sequencing gel diluent contained in the set, gels with 50 % urea content are obtained. By adding defined quantities of ROTIPHORESE®10x TBE buffer or water, the urea content can be reduced to up to 40 %.

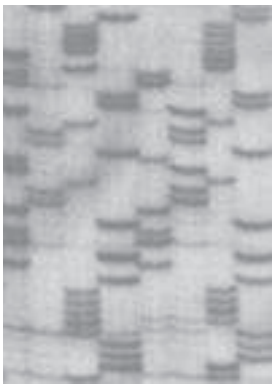
Directions for use

Handling is most simple: Measure and mix certain amounts of all three components, add APS and TEMED, and cast the gel. We recommend using the Carl ROTH sequencing electrophoresis chamber (Art. no. AE28).

ready-to-use

ROTIPHORESE®DNA sequencing system

ROTIPHORESE® for DNA sequencing



Set of ready-to-use solutions for preparation of DNA sequencing gels (manual sequencing).

The kit contains

- 1 l ROTIPHORESE®sequencing gel concentrate (Art. No. 3043.1) – ready-to-use, stabilised solution of 25 % acrylamide/bisacrylamide 19:1 with 50% urea (8,3 M).
- 1 l ROTIPHORESE®sequencing gel diluent (Art. No. 3047.1) – 50 % (g/v; 8,3 M) solution of urea in water.
- 250 ml ROTIPHORESE®sequencing gel buffer concentrate (Art. No. 3050.1) – 10x TBE with 50 % urea (8,3 M).
- Detailed instructions for use are enclosed with the product.

One set is sufficient for 35 gels of 6 % (30 x 40 cm) with 40 % urea
Storage temperature: +4 to +15 °C

ROTIPHORESE®PAGE Matrix Buffer plus

Gel matrix buffer, SDS-PAGE buffer

- Increases protein separation quality significantly
- Superior band dissemination from 5 kDa to 250 kDa
- Higher gel strength and longer shelf life
- Compatible with all common gel loading and running buffers
- Compatible with all common gel staining methods
- Also well suitable for 2D gels and prior to Western Blotting
- 250 ml sufficient for approx. 100 mini gels

ROTIPHORESE®PAGE Matrix Buffer plus is a 4x concentrated gel matrix buffer for enhanced protein separation and significantly higher gel strenth.

ROTIPHORESE®PAGE Matrix Buffer plus can be used for preparation of both stacking gel and resolving gel by simply replacing the Laemmli/ TRIS-, or TRICIN-, buffer system. Even gels with stacking gels of only one acrylamide concentration, show a protein separation quality comparable to that of gradient gels. Band depiction is significantly enhanced compared to standard buffer systems.
ROTIPHORESE®PAGE Matrix Buffer plus also provides increased gel strength, making handling of the gels much more convenient, for instance during separation of the glass plates or during transport. Gel stability is increased, leading to longer shelf lifes of self-made gels. Gels prepared with ROTIPHORESE®PAGE Matrix Buffer plus may also very well be used for 2D protein analysis or for subsequent Western Blotting onto NC or PVDF membranes.

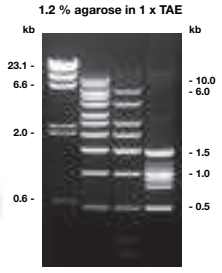
Agaroses and Gelling Reagents

Our agarose ROTI®Garose is a neutral polysaccharide which is obtained in many purification steps from the cell wall of certain algae, called Rhodophyceae. ROTI®Garose forms very clear gels with all standard running buffers and will result in a sharp and clear separation of your biomolecules. Extremely pure agarose with very low interference binding to staining reagents. Roti®garose produces a low background and high contrast appearance after staining

- For clear and sharp bands
- Gels with high transparency
- Low background
- Suitable for all standard running buffers and high-speed buffer systems
- Compatible with all nucleic acid staining systems
- Non-toxic in cell immobilisation assays
- Of course DNase and RNase free

Please note our **Technical Information Brochure** on the Internet next to the agaroses:
ROTI®Garoses and gel electrophoresis.



Roth Has the Right Agarose for Every Application:

Roti®garose	Art. No.	Application
Standard	3810	Routine gels, student's courses, general analyses (1–20 kb).
NEEO ultra quality	2267	All standard applications, qualitative and quantitative gels, screening and blotting. Range 500 bp–20 kb.
Agarose Tablets	HP67	Highly reproducible gels, or simple applications in students courses. Suitable for all standard-gels (0,5–0,25 %). For fragments ≥300 bp.
GTQ	6352	Genetic engineering quality, for DNA-elution of fragments ≥500 bp without melting the agarose* ** Tip: Use Kit Roti®-Prep Gel Extraction (Art. No. 8510.1)*
Broad Range	T846	For the total analytical range (200 bp up to 40 kb), Pulsed-Field electrophoresis, blotting, shift assays. Ideal when only a few agaroses are to be used in the laboratory.
Pulsed-Field	3771	Separation of large fragments (up to 20 kb), Pulsed Field gel electrophoresis (PFGE)
HR PLUS	HP30	Analysis of fragments between 100 and 3000 bp
High Resolution	K297	Analysis of fragments between 50 and 1000 bp
Low Melt	6351	With low melting and gelling temperatures (MT ≤65,5 °C, GT ≤28 °C). For gel elution from melted agarose. Range 500 bp-20 kb.
LM / PCR	HP31	Genetic engineering quality with low melting and gelling temperatures (MT ≤65 °C, GT ≤35 °C). For DNA-elution of fragments <1500 bp from melted agarose.
Super LM	HP45	With extremely low melting and gelling temperatures. (MT ≤62 °C, GT ≤20 °C). For gel elution from melted agarose. Recommended for in-gel analysis, capillary electrophoresis and cell and tissue culture. For fragments ≥1000 bp.
MEEO Ultra quality	2268	With medium EEO. For immune, serum and antibody electrophoresis. Range 500 bp–10 kb.
HEEO Ultra quality	2269	With high EEO. For protein precipitation and countercurrent electrophoresis.
Synergel®	0184	Agarose additive for finer pore formation. Increases the separative power of the agarose. For fragments from 10 bp up.

Agaroses and Gelling Reagents

DNAse-free RNAse-free

Agarose Standard

ROTI®Garose for DNA/RNA electrophoresis

General agarose for routine gels, student's courses, and standard analyses (1 kb-20 kb).

- Inexpensive agarose for routine gels and standard analyses
- Good separation efficiency for nucleic acids of 1 to 20 kb length
- Easily melting, non-foaming agarose
- Low background fluorescence after ethidium bromide staining
- Very cost-effective

Figure (left to right): Roth Lambda *Hind* III Marker (Art. No. X910.1) 0,6 µg, 1 kbp DNA Ladder (Art. No. Y014.1) 0,8 µg, DNA-Marker short-run *extended* (Art. No. CL05.1) 0,4 µg, PCR-Marker DNA*score* (Art. No. T146.1) 0,5 µg.

Agarose as Gelling Reagent

Chemically, agarose is a galactan which is capable of forming extremely solid gels, even at a low concentration. The pore size of the gels is determined by the concentration of the agarose used. Because there are no ionic groups in the gel, hydrophilic materials without any interaction with the gel matrix will also be separated according to their size. The high hysteresis of the agarose, that is the thermal stability after solidification, ensures that the gels remain reliably stable even during heatproducing running conditions.

DNAse-free RNAse-free

Agarose NEEO ultra-quality

ROTI®Garose low electroendosmosis (EEO = 0.05–0.13)

High-quality agarose for all general applications (500 bp-20 kb).

- Excellent separative power for nucleic acids of 500 bp to 20 kb
- High gel strength for stable gels and good handling
- Extremely low EEO allows speedy and efficient separation of nucleic acid molecules
- Fast melting, non-foaming agarose

Figure: (left to right) Roth Lambda *Hind* III / phiX *Hae* III marker (Art. No. CP49.1) 1 µg, 1 kbp DNA-ladder (Art. No. Y014.1) 0,8 µg, 100 bp-DNA-ladder *extended* (Art. No. T835.1) 0,8 µg, pBR328 Mix I (Art. No. T146.1) 0,8 µg.

Agaroses and Gelling Reagents

DNAse-free RNAse-free

Agarose-Tablets

ROTI®Garose 0,5 g agarose/tablet

Standard agarose with low EEO, for routine analyses (≥300 bp).

- Easy-to-use and safe tablets for constant gel strength and well reproducible gels
- Reliable agarose for routine analyses
- for detection of inserts or PCR amplificates of over 300 bps
- Agarose with high gel strength, applicable from 0,5 to 2,5 %
- Compatible with all standard running buffers and nucleic acid-staining methods

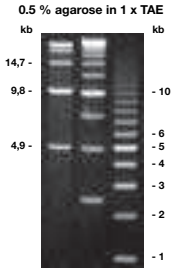
DNAse-free RNAse-free

Agarose GTQ

ROTI®Garose Genetic engineering quality

Especially tested agarose for gel elution and biomolecular approaches (500 bp-20 kb).



- Genetic technology quality (GTQ)
- For preparative DNA/RNA-electrophoresis of 500 bp to 20 kb
- Recommended for all molecular-biological routine methods like blotting, cloning, sequencing etc.
- No DNA binding
- No inhibition of restriction enzymes and ligases
- Particular low gel background after ethidium bromide staining

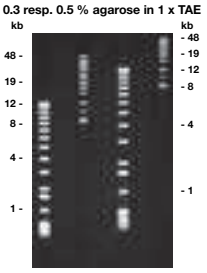
DNAse-free RNAse-free

Agarose Broad Range

ROTI®Garose BioScience Grade



For gel electrophoresis, total size range (200 bp-40 kb).

- High-molcular linear polymer of particularly high DNA mobility in electrophoresis
- The ideal choice for Pulse Field gel electrophoresis
- Excellent for resolving DNAfragments between 200 bp and 40 kb in conventional gel electrophoresis
- Low EEO allows speedy and efficient resolution of very large DNA-molecules
- Extremely high gel strength guarantees good handling even at low concentrations of 0,3 % agarose
- Also suitable for separation of particles like ribosomes, virions or chromosomes

Agarose Pulsed-Field

ROTI®Garose Genetic engineering quality, for pulsed field electrophoresis

Special agarose for separation of large fragments (20-50 kb).

- Optimised for separation of fragments of 20 to 50 kb or for Pulsed Field Gel Electrophoresis (PFGE)
- High gel-strength agarose for tearproof gels that are easy to handle
- High DNA mobility for fast and efficient gel electrophoresis
- Low background fluorescence after ethidium bromide staining
- In general, suitable for separation of fragments larger than 1000 bp
- Tested for absence of DNAses, RNAses and DNA binding

Figure (left to right): 0,3 % Agarose Pulsed-Field, extended 1kbp Ladder (1 µg) and High Molecular Weight Marker (0,3 µg, heated for 10 mins. at 65 °C); then same markers on 0,5 % Agarose Pulsed-Field.

Electroendosmosis (EEO)

Osmotic Liquid Migration Caused by Electric Current

In gel matrices of agarose gels, minor impurities caused by cations (sulphate ester) are frequent. When an electric field is applied they move in the direction of the cathode, generating an electroosmotic flow (EOF) of the entire aqueous medium towards the negative pole. The migration speed of the flow depends, amongst other things, on the strength of the electric field and the frictional force generated by the gel matrix. The EOF always runs in the direction of the cathode, that is opposite to the movement of the anions separated during nucleic acid electrophoresis, and slows down their migration.

In the event of an agarose with high EEO, many cations are present, which generate a strong EOF. Furthermore, the gel strength is low, causing only weak frictional force. The strong EOF can lead to a change of behaviour during the run of the negatively-charged molecules (DNA/RNA) when using the agarose MEEO or HEEO. In extreme case anions with low self-mobility can even be diverted and transported in the direction of the cathode, causing band shifting.

DNAse-free RNAse-free

Agarose HR-PLUS

ROTI®Garose for analytical gels

Special agarose for use in the main analytical range (100 bp-3 kb).

- Reliable agarose for routine analyses in the range of 100 to 3000 bp
- Superior separation efficiency and high gel strength, usable in concentrations of up to 3 % agarose
- Very well suited for analysis of PCR amplificates, restriction digests and for blotting
- Low gel background
- Compatible with all standard nucleic acid-staining methods
- Separation range in 1 x TAE:
  1 % proof agarose gel: 1000-3000 bp
  1,5 % proof agarose gel: 300-2000 bp
  2,5 % proof agarose gel: 100-1000 bp

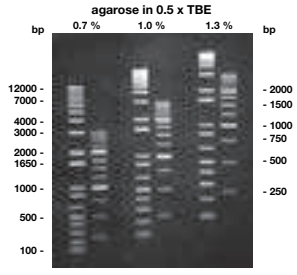
DNAse-free RNAse-free

Agarose High Resolution

ROTI®Garose for small fragments

Special agarose for PCR gels and small DNA fragments (50 bp–1 kb).



- High resolution of PCR-products and DNA fragments in the 50–1000 bp range
- Low gel background after staining, even for highly concentrated gels
- Can be used in concentrations of up to 5 % agarose
- Low DNA binding and low EEO for efficient separation of very small fragments
- Tip: cool the gel for 30 mins. at 4–8 °C before use for superior separation
- Separation range in 1 x TAE:
  1,8 % proof agarose gel: 500–1000 bp
  3,0 % proof agarose gel: 150–600 bp
  4,5 % proof agarose gel: 50–350 bp

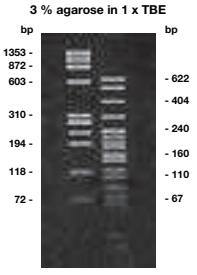
Agaroses and Gelling Reagents

DNAse-free RNAse-free

Agarose Low Melt

ROTI®Garose with low melting and gelling temperature



Particularly for gel elution and in-gel-application in a wide size range (500 bp–20kb).

- Low melting point and low gelling temperature
- High transparency and very low self fluorescence. For particular clear gels.
- The ideal solution when nucleic acid fragments or proteins are to be recovered after electrophoretic resolution
- Suitable for enzymatic reactions in liquid agarose (in-gel-applications)
- Excellent for immobilising microorganisms and virus-plaque-assays
- Suitable for cell culture applications (animal and plant)
- Tested for stability after autoclaving

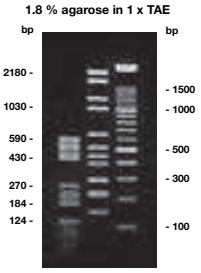
DNAse-free RNAse-free

Agarose LM/PCR

ROTI®Garose Genetic engineering quality, with low melting and gelling temperature

Particularly for gel elution of small fragments (50 bp–1500 bp).

High resolution low melting agarose in genetic engineering quality. For optimal fragment separation, DNA recovery and cloning of PCR amplificates.



- Low melting point and low gelling temperature
- Fine resolution of fragments from 50 to 1500 bp
- Very well suited for analysis and recovery of PCR amplificates and fragments derived from restriction digests
- Also well suitable for in-gel-applications
- Low gel background, compatible with all standard nucleic acid-staining methods
- Low viscosity agarose, recommended for use in concentrations of 3 to 6 % agarose.

Note: gels of 2 % agarose and lower are fragile!

DNAse-free RNAse-free

Agarose Super LM

ROTI®Garose with particularly low melting and gelling temperature

Particularly for gel elution from melted agarose, capillary electrophoresis and in-gel processing (≥1000 bp).

- Fine resolution of fragments over 1000 bp
- Very well suited for analysis and recovery of longer PCR amplificates or other longer fragments like vectors, rare cutter digestions etc.
- Recommended for in-gel-applications, virus plaque-assays and tissue/cell culture applications
- Low gel background, compatible with all standard nucleic acid-staining methods
- Lower gel strength than Agarose Low Melt. Recommended for use in concentrations of over 1 % agarose

DNAse-free RNAse-free

Synergel™

≥99 %, for gel electrophoresis, up to 30 kb

Agarose additive

Synergel™ is a synergistic gelling and sieving agent consisting of a modified polysaccharide which, when combined with agarose, forms a hydrogen bonded binary gel system.
The addition of Synergel™ to agarose improves gel performance by providing superior separation and definition of DNA fragments up to 30 kb. A gel mixture containing 0,7 % agarose and 0,7 % Synergel™, e.g., will produce improved results when compared to a 2 % agarose-only gel. Synergel™ also provides greater optical clarity, which allows higher quality photodocumentation of stained gels.

Directions for use

Standard buffer systems like phosphate, acetate or borate buffered Tris-EDTA may be used in forming the gel with agarose/ Synergel™. RNA may also be separated in this system by using a 2,2 M formaldehyde-containing buffer. Synergel™ is compatible with standard blotting procedures, thus, nucleic acid may be electroeluted or transferred to membranes following standard Southern/Northern blotting protocols.

The **figure** compares separation qualities of
A: 1,5 % Synergel™ / 0,7 % agarose and **B:** 4 % high-resolution agarose (NuSieve®).
Please see also figures for pUC19 markers T149 and X901.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Type analysis

Colour ..... white to off-white powder
Odour ..... slightly salty
pH (1 % solution) 9
DNase, RNase ..... none detected

Art. No.	Pack Qty.	Pack.	€
0184.2	10 g	plastic	36,45
0184.1	100 g	plastic	256,95

How to Calculate the Required Synergel™ Quantity?

1. What percentage agarose gel is currently being used?
2. The gel will inevitably contain 0.7 % agarose (the minimum agarose concentration required to ensure gel stability). Hence, subtract 0.7 % from the agarose total.
3. Divide the difference by 2. The result is the percentage of Synergel™ to be added to the 0.7 % agarose.

Example:
Convert a 1 % agarose to a 1 % Synergel™/agarose gel

a. Substract 0.7 % from the 1 % agarose: 1 % – 0.7 % = 0.3 %

b. Divide the difference by 2: 0.3 % : 2 = 0.15 %

c. 0.15 % (150 mg / 100 ml) is the amount of Synergel™ added to 0.7 % agarose (0.7 g / 100 ml) to produce the functional equivalent of a 1 % agarose gel.

Electrophoresis Gel Buffer Solutions

Time sparing ready-made buffers saving valuable time and significantly reducing your effort to prepare electrophoresis buffers. Each batch is manufactured from reagents of the highest purity and is subsequently filtered.

ROTIPHORESE®SDS-PAGE

SDS-PAGE buffer, Tris-glycine-SDS buffer, Laemmli buffer

Concentrated stock solution for tris/glycine/SDS gel run buffer (PAGE)

- Standardised composition according to Lämmli (*Nature*)
- Made from high-quality reagents
- For constant quality and highly reproducible gels

Mechanism

SDS denatures proteins and binds in a constant mass ratio to their peptide chains, covering their intrinsic charge. In the collection gel (pH 6.8) all proteins are kept in a sharp band between the neutral **Glycin** and chloride ions and thus all reach the separation gel at the same time. After the pH change when the separation gel is reached (pH 8.8), the chloride ions and the now cationic **Glycin** migrate very quickly to the anode and leave the proteins to themselves, which now move in the electric field **depending on size** towards the anode.

ready-to-use

ROTIPHORESE®10x SDS-PAGE

ROTIPHORESE® 10x conc.

SDS-PAGE running buffer in electrophoresis.

ROTIPHORESE®10x SDS-PAGE contains 0,25 M Tris, 1,92 M glycine and 1 % (w/v) SDS in distilled, deionised water for protein analysis. Acc. to Laemmli (1970), *Nature* 227:680.

Directions for use

ROTIPHORESE®10x SDS-PAGE is usually used as 1x concentrated solution. SDS-PAGE buffer is suitable for the denaturing separation of proteins and peptides of any size in the discontinuous polyacrylamide gel (collection gel / separation gel).

Mix before use!

WGK 1

0.25 M TRIS, 1.92 M glycine.
1 % (g/v) SDS, distilled, deionized water.
Remark: The product may crystallise. Can be redissolved by heating (max. 40 °C).

ROTI®Fair SDS-PAGE

SDS-PAGE powder (pouch), Tris-glycine-SDS buffer, Laemmli buffer

Exactly pre-weighed pouches for convenient and rapid preparation of SDS-PAGE solution.

Running buffer for protein gel electrophoresis. Contains SDS und may therefore also used with SDS-free gels. Nach: Laemmli (1970), *Nature* 227:680.

Prepared solution may be sterilized by filtration (0,22 µm). For storage, buffer solution should be kept at room temperature.

ROTI®Fair SDS-PAGE

for 1000 ml/pouch, for electrophoresis

Buffer for protein electrophoresis.

1x SDS-PAGE solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

WGK 2

Danger H318

Prepared 1x SDS-PAGE solution contains: 25 mM Tris, 0.192 M glycine, 0,1 % SDS, pH 8.3 ±0,05, when prepared in deionized or distilled water.

PAGE – polyacrylamide gel electrophoresis
General technical information

Gel Buffer Solutions

ROTIPHORESE®TBE Buffer

TBE-buffer

The TBE buffer is optimally suited as a gel and running buffer system.

Mechanism

TBE buffer has a higher buffer capacity than TAE, but also leads to stronger heating of the gels. A slightly lower voltage should therefore be selected when gelling. DNA migrates in the TBE gel about half as fast as in TAE-buffered gels.
ROTIPHORESE®TBE buffer has a high buffer capacity and is therefore ideally suited as a gel and running buffer system for sequencing gels.

ready-to-use

ROTIPHORESE®10x TBE Buffer

ROTIPHORESE® 10x conc.

TBE-buffer for preparing sequencing gels and as running buffer in electrophoresis.

ROTIPHORESE®10x TBE buffer contains 1,0 M Tris-Borate pH 8,3 and 20 mM EDTA in distilled, deionised water; pH 8,3.

Suitable for manufacturing sequencing gels with ROTIPHORESE®-Gel 40 and as a running buffer.

Directions for use

ROTIPHORESE®TBE buffer is usually used as 1x or 0.5-fold concentrated solution. TBE buffer is particularly suitable for the separation of small DNA fragments in the gel (up to 3 kb). TBE buffer is not suitable for use of gels for gel extraction of DNA.

Concentrated TBE tends to precipitate salts during storage. Mix before use!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Danger H360FD

1.0 M TRIS borate (pH 8.3), 20 mM EDTA.
distilled, deionized water.

ROTIPHORESE®NF 10x TBE Buffer

ROTIPHORESE® 10x conc., fluorescence-free

TBE-buffer for preparing sequencing gels and as running buffer in electrophoresis
Tested and optimised for automatic sequencers.

10-times concentrated buffer formulated specially for automated sequencing.

10x stock solution contains 0,89 M Tris-Borate and 22 mM EDTA in distilled, deionised water; pH 8,3.

Directions for use

Suitable for manufacturing sequencing gels with ROTIPHORESE®NF Acrylamide/Bis-solution 40 % (19:1) and as running buffer.In sequencing, NF-TBE buffer is usually used in a final concentration of 1x.

Ideally suited as a gel and running buffer system and also for sequencing gels,

Concentrated TBE tends to precipitate salts during storage. Mix before use!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTIPHORESE®TAE Buffer

TAE-buffer

The TAE buffer is optimally suited as a gel and running buffer system.

Mechanism

TAE buffer has a lower buffer capacity than TBE and can be used with higher voltages, longer gels and larger DNA fragments. The gels heat up during running to a lesser extent than when using the running buffer TBE. DNA migrates in TAE gel about twice as fast as in TBE buffered gels.

ready-to-use

ROTIPHORESE®50x TAE Buffer

ROTIPHORESE® 50x conc.

Running buffer in DNA agarose gel electrophoresis.

ROTIPHORESE®50x TAE Buffer contains 2 M Tris, 1 M acetic acid and 50 mM EDTA in distilled, deionised water; pH 8,5.

Directions for use

ROTIPHORESE®TAE buffer is usually used as 1x concentrated solution. TAE buffer is suitable for the separation of DNA fragments of all sizes in gels. For the run of gels for gel extraction of DNA, we recommend using ROTIPHORESE®10x TAE-Puffer *light*.

Concentrated TAE tends to precipitate salts during storage. Mix before use!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Concerning the ROTIPHORESE®10x TAE, 50x TAE and 10x TBE

During prolonged storage salt crystals may precipitate, which are easily resolubilised by gentle heating and shaking.
The quality of the buffer is not affected by this procedure.
Do not take out buffer solution when any precipitate is visible.

ready-to-use

ROTIPHORESE®10x TAE Buffer

ROTIPHORESE® 10x conc.

Running buffer in DNA agarose gel electrophoresis.

ROTIPHORESE®10x TAE Buffer contains 0,4 M Tris, 0,2 M acetic acid and 10 mM EDTA in distilled, deionised water; pH 8,3.

Directions for use

TAE buffer is usually used as 1x concentrated solution. TAE buffer is suitable for the separation of DNA fragments of all sizes in gels. For the run of gels for gel extraction of DNA, we recommend using ROTIPHORESE®10x TAE-Puffer *light*.

Concentrated TAE tends to precipitate salts during storage. Mix before use!

ready-to-use

ROTIPHORESE®10x TAE Buffer *light*

ROTIPHORESE® 10x conc., reduced EDTA concentration

Buffer concentrate for DNA agarose gel electrophoresis, ideal for DNA elution gels or in-gel-applications.

ROTIPHORESE®10x TAE-buffer *light* is particularly ideal for agarose gels in DNA-elution. Although the reduced EDTA-content lowers the contamination of the eluted DNA with EDTA and therefore prevents any interference of enzymatic activity, e.g. from ligases, isomerases or polymerases, the buffer properties still remain totally intact. Particularly suitable for in-gel-applications when used with ROTI®Garose Low Melt (Art. No. 6351).

ROTIPHORESE®4 M Tris-acetate and 1 mM EDTA in distilled, deionised water; pH 8,3.

Directions for use

ROTIPHORESE®TAE buffer*light* is usually used as 1x concentrated solution. TAE buffer is suitable for the separation of DNA fragments of all sizes in gels. Optimized for the run of gels for the gel extraction of DNA.

Concentrated TAE tends to precipitate salts during storage. Mix before use!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTI®Fair TAE

TAE powder (pouch)

Exactly pre-weighed pouches for convenient and rapid preparation of TAE solution.

Running buffer for DNA gel electrophoresis. TAE is recommended for gel analysis of large fragments and for gel elution, when high recovery rates are needed. Additionally, TAE is the buffer of choice for native or denaturing RNA gels.

Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at room temperature.

ROTI®Fair 50x TAE

for 500 ml/pouch, for electrophoresis

Buffer concentrate for DNA electrophoresis.

50x TAE solution is prepared by dissolution of 1 pouch in 500 ml highly pure water.

Gel Loading Buffers

Gel Loading Buffers for Proteins

ROTI®Load

Laemmli buffer, Gel loading buffer

ROTI®Load 1 (reducing) as well as **ROTI®Load 2 and 3 (non-reducing)** represent special gel loading buffers for protein gel electrophoresis. They have been designed to protect your proteins during sample preparation and to stabilise sensitive peptide bonds. Protein degradation is efficiently prevented by those buffer systems. ROTI®Load are 4x concentrated ready-to-use solutions, which may be used directly for sample loading.

Selecting a Suitable ROTI®Load Gel Loading Buffer for Proteins

ROTI®Load 1 is suitable **for all PAGE standard gels**. It has denaturing and reducing properties.
ROTI®Load 2 is suitable **for protein complexes, secondary structures and native gels**. It has denaturing properties, but it does not have reducing properties. It is possible to enrich the buffer solution with reducing agents such as β-Mercapto-ethanol or DTT.
ROTI®Load 3 is suitable **for native gels, precast gels and cooled gels**. The buffer solution contains LDS. Unlike SDS, LDS does not crystallise out at low temperatures. In addition, the buffer solution is optimally adapted for precast gels. ROTI®Load 3 has denaturing properties, but does not have reducing properties. It is possible to enrich the buffer solution with reducing agents such as ß-Mercaptoethanol or DTT.

Glycerine is the standard reagent for increasing the density of samples.
SDS (sodium dodecyl sulphate), LDS (lithium dodecyl sulphate) are anionic surfactants. They form a negatively charged mantle around the protein molecules, which results in a denaturing effect. This process is reversible. Irreversible denaturation only occurs if the samples are boiled. Negative charging allows the molecules to be separated during electrophoresis.
β-mercaptoethanol, DTT (dithiothreitol) are reducing agents which split disulphide bridges in protein molecules. Increased unfolding of the molecule occurs. This process is reversible.

ready-to-use

ROTI®Load 1

4x conc., reducing

Protein gel loading buffer, modified formulation acc. to Laemmli.

Well tested and proven sample buffer for protein gel electrophoresis that has been modified and further developed based on the original formulation acc. to Laemmli (*Nature* 227, 1970). Optimized for a distinct band display. Recommended for size estimation of proteins in gel.

- Formulation acc. to Laemmli (modified)
- Stabilises peptide bands
- Prevents protein degradation
- Improves gel separation

Directions for use

ROTI®Load protein gel loading buffers are usually used as 1x concentrated solution. ROTI®Load can either be added to the prepared sample or the precipitated proteins are dissolved directly into ROTI®Load. Heat the ROTI®Load mixed sample to 95 °C for 5 minutes to break hydrogen bonds and stretch the peptide chains. The β-Mercaptoethanol contained in ROTI®Load 1 opens disulfide bridges by reduction and leads to a complete molecular stretching, the basic requirement for a correct size estimation of proteins in the gel.

ROTI®Load 1 prevents degradation of proteins while heating during sample preparation, additionally keeping the sample pH value constant during gel electrophoresis. Being a phosphate-buffered ready-to-use solution, ROTI®Load 1 already contains all necessary denaturing and reducing reagents, bromophenol blue as dye and glycerol as density increasing reagent.

Contains SDS (approx. 8 % w/v), β-mercapto ethanol (approx. 20 % v/v), glycerol (approx. 40 % v/v) and bromophenol blue (approx. 0,015 % w/v). Phosphate buffered.

Storage temperature: +15 to +25 °C

Gel Loading Buffers

ready-to-use

ROTI®Load 2

4x conc., unreducing

Protein gel loading buffer, modified formulation acc. to Laemmli. For protein complexes, secondary structures, and for native gels.

Well tested and proven sample buffer for protein gel electrophoresis that has been modified and further developed based on the original formulation acc. to Laemmli (*Nature* 227, 1970). For depiction of protein complexes, secondary structures, and for native gels.

- Formulation acc. to Laemmli (modified)
- Stabilises peptide bands
- For protein complexes and secondary structures
- For native gels

Directions for use

ROTI®Load protein gel loading buffers are usually used as 1x concentrated solution. ROTI®Load can either be added to the prepared sample or the precipitated proteins are dissolved directly into ROTI®Load. Optionally, heat the ROTI®Load mixed sample to 95 °C for 5 minutes to break hydrogen bonds and stretch the peptide chains.

ROTI®Load 2 prevents degradation of proteins while heating during sample preparation, additionally keeping the sample pH value constant during gel electrophoresis. Being a phosphate-buffered ready-to-use solution, ROTI®Load 2 already contains all necessary denaturing reagents, bromophenol blue as dye and glycerol as density increasing reagent. ROTI®Load 2 may be supplemented with 20 µl/ml DTT solution (1 M), in order to gain a loading buffer using DTT as reducing reagent rather than β-Mercaptoethanol.

Contains SDS (approx. 8 % w/v), glycerol (approx. 40 % v/v) and bromophenol blue (approx. 0,015 % w/v). Phosphate buffered.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 2

Danger H318

Remark: Contains SDS. Can be redissolved by heating (max. 45 °C).

K930.1	10 ml	glass	19,25

ready-to-use

ROTI®Load 3 (LDS)

4x conc., unreducing

Protein gel loading buffer for ready-made gels and cooled gels.

Modified, non-reducing protein sample-gel loading buffer for gels under denaturing or native conditions.

- Optimised for ready-made gels and cooled gel runs
- Superior solubility at low temperatures
- Stabilises proteins in the gel

Directions for use

ROTI®Load protein gel loading buffers are usually used as 1x concentrated solution. ROTI®Load can either be added to the prepared sample or the precipitated proteins are dissolved directly into ROTI®Load. Optionally, heat the ROTI®Load mixed sample to 95 °C for 5 minutes to break hydrogen bonds and stretch the peptide chains.

During sample preparation and heating, ROTI®Load 3 (LDS) efficiently prevents degradation of your proteins, also stabilising the pH value during the run.
This gel loading buffer is based on a triethanolamine buffered ready-to-use solution, in which the standard sodium dodecylsulphate (SDS) has been replaced by lithium dodecylsulphate (LDS). At low temperatures, LDS is much better soluble than SDS. Hence, no crystallisation of LDS takes place, and protein stability as well as band resolution is significantly enhanced.
Additionally, the formulation of ROTI®Load 3 (LDS) has been optimised for ready-made gels, particularly Q-PAGE™ gels, but also ready-made gels of other standard suppliers.

For reducing conditions, ROTI®Load 3 (LDS) may be supplemented with 20 µl/ml DTT solution (1 M) or with β-mercaptoethanol.

Contains LDS (approx. 4 % w/v), glycerol (approx. 40 % v/v) and Ficoll® 400 (approx. 4 % w/v), plus phenol red (approx. 0,025 % w/v) and Coomassie® G250 (approx. 0,025 % w/v). Triethanolamine buffered.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Gel Loading Buffers for Nucleic Acids

The Carl Roth gel loading buffers are special buffers for nucleic acid electrophoresis. Each batch is tested for its functionality in electrophoresis. The gel loading buffers are ready-to-use solutions, which may be used directly.

ROTI®Load DNA buffer solutions contain Tris, sodium acetate and EDTA, with additional tracking dyes. For increasing the density when loading the gel, they are available in three different variations – with glycerol or ficoll.

ready-to-use

Gel Loading Buffers for Nucleic Acids

Stockage temperature: –20 °C
For safety information, see chapter Chemicals A-Z.

Selecting a Suitable ROTI®Load Gel Loading Buffer for Nucleic Acids

Care should be taken to ensure that the dyes contained in the gel stop before smallest relevant DNA bands. This ensures that the buffer can be stopped in time. However, the selected dyes may overlay the bands shown. In this case, select a loading buffer that does not contain any unwanted dyes.
Bromophenol blue and xylene cyanol can be used as colour markers in all **standard gels**. If a relevant band is overlaid by one of these colour markers, choose a gel loading buffer containing Orange G. If **small fragments** are to be assayed, the gel loading buffer should contain Orange G in order to mark the run. If relevant bands are overlaid, however, a choice can be made between bromophenol blue or xylene cyanol depending on the size of the bands. A loading buffer without xylene cyanol is usually used for assaying **large fragments**.

Glycerine is the standard reagent for increasing the density of samples.
Ficoll® 400 produces particularly well-defined bands.

Please note: Reliable size determination of proteins cannot be performed using prestained markers. For this, we recommend the use of an unstained marker.

ROTI®Mark protein markers, prestained

Markers (protein gels), Protein-Markers

Perfect separation behaviour in the gel. Protein markers from Carl ROTH are acylated and pre-reduced, for optimal running behaviour in the gel. For each batch, intensity of bands is optimised and electrophoretically tested. All protein markers are offered as ready-to-use solutions which may be applied directly to the gel.

ready-to-use

ROTI®-Mark ALL BLUE

ready-to-use, prestained

Size range: 10-240 kD
Number of protein bands: 12
Number of lanes/ml: approx. 200 (mini gel)

ROTI®Mark ALL BLUE is a marker with 12 blue prestained proteins covering a range from 10 to 240 kDa in Tris-Glycine buffer. For better orientation in the gel the 25 kDa and the 75 kDa fragment are enhanced in their mass.
ROTI®Mark ALL BLUE is an ideal size marker for controlling the gel run during SDS-PAGE and for reliable evaluation of transfer efficiency during Western Blot.

Fig.: 15 % SDS-PAGE (Tris-Glycine)

ROTI®Mark BI-PINK

ready-to-use, prestained

Size range: 10-175 kD
Number of protein bands: 11
Number of lanes/ml: approx. 200 (mini gels)

Protein marker including bicolour-prestained proteins of 10 up to 175 kDa. In order to visualise separation during the gel run and for better orientation in the gel, three proteins of approx. 10, 40 and 90 kDa have been prestained in blue in addition to the pink coloured bands. All proteins excel by having a very even running behaviour and form distinct bands.
ROTI®Mark BI-PINK is an ideal size marker for controlling the gel run during SDS-PAGE and for reliable evaluation of transfer efficiency during Western Blot.

Number of protein bands: 12
Number of lanes/ml: approx. 200 (mini gels)

Protein marker including tricolour-prestained proteins of 10 up to 245 kDa. In order to visualise separation during the gel run and for better orientation in the gel, two proteins of approx. 25 and 75 kDa have been prestained in green and red, respectively, in addition to the blue coloured bands. All proteins excel by having a very even running behaviour and form distinct bands.
ROTI®Mark TRICOLOR is an ideal size marker for controlling the gel run during SDS-PAGE and for reliable evaluation of transfer efficiency during Western Blot.

Fig.: 4–20 % gradient SDS-PAGE (Tris)

For direct application to the gel.

Storage temperature: –20 °C
Transport temperature: ambient temp.

ROTI®Mark TRICOLOR XTRA

ready-to-use, prestained

Size range: 10-310 kD
Number of protein bands: 12
Number of lanes/ml: approx. 200 (mini gel)

ROTI®Mark TRICOLOR XTRA is a tricolour-prestained marker covering an extra range of molecular weights from 10 to 310 kDa in Tris-Glycine buffer. In order to visualise separation during the gel run and for better orientation in the gel, there is, besides the blue coloured proteins, one protein prestained in green (25 kDa) and two proteins in red (75 and 310 kDa). All bands excel by having a very even running behaviour and a good differentiation.
ROTI®Mark TRICOLOR XTRA is an ideal size marker for controlling the gel run during SDS-PAGE and for reliable evaluation of transfer efficiency during Western Blot.

Number of protein bands: 7
Number of lanes/ml: approx. 200 (mini gels)

Markers (protein gels) · Protein-Markers

ROTI®Mark PETIT is a finely graded protein marker for small size range. It consists of four genetically engineered proteins with defined, regular molecular weight and, in addition, of three native proteins for better visualization of the small size range. The marker is dissolved in non-reducing Laemmli buffer and can be used directly.

DNA Markers

Carl ROTH offers a multifaceted marker range including DNA markers for each application required. Our DNA-markers produce sharp, clear bands. Terminally, the unregular markers carry sticky *Eco*R I sites and, therefore, end-labelling methods can be applied easily.

DNA Markers with Unregular Pattern

These markers are recommended for DNA quantitation in the gel. DNA amounts of all bands are depicted in the included instructions-for-use.

For direct detection of the marker DNA in the gel under UV- or blue light we recommend to use lyophilized marker DNA. The marker DNA is first solubilized in sterile water or 1xTE buffer, then ROTI®Load DNAstain SYBR®Green (6x conc.) is added. The so prepared marker may be aliquoted and stored at –20 °C.
ROTI®Load DNAstain SYBR®Green contains a fluorecent dye which may be excited by UV- or blue light, emitting at 525 nm.

Lambda Hind III / phiX Hae III Marker

lyophilised, not prestained

Size range: 72-23130 bp
Number of fragments: 17
Number of lanes per 100 µg: approx. 200 (mini gels)

Lambda DNA-Marker

Versatile marker for depiction of all standard DNA fragment lengths.
Manufactured by restricting unmethylated DNA with the restriction endonucleases *Hind* III and *Hae* III.
By mixing high molecular weight Lambda (*Hind* III) fragments with short-sequence phiX-174 (*Hae* III) fragments a marker was designed which covers a broad range from 200 bp up to 20 kb. Most fragments are distributed in an equimolar way, additionally allowing rough DNA quantification in the gel. Due to this equimolarity, however, the smallest bands of 125 bp, 118 bp and 72 bp can not be detected efficiently in standard gels.

Directions for use

Optimal results are obtained with a running distance of approx. 10 cm.

Fig.: 1 % agarose (NEEO, Art. No. 2267).

DNA ladder in lyophilised form. Gel loading buffer (Art. No. 0100.1) for dissolving the DNA and subsequent application on gels is supplied.

Lambda Hind III Marker

lyophilised, not prestained

Size range: 125-23130 bp
Number of fragments: 8
Number of lanes per 100 µg: approx. 200 (mini gels)

Lambda DNA-Marker

Classical, irregular standard for analysis of middle-range DNA fragments.
The marker was manufactured by using unmethylated Lambda-DNA and restriction endonuclease *Hind* III. The restriction digestion results in a largely equimolar distribution of the DNA (with the exception of the 4361 bp fragment), so that additional DNA quantity estimation can be performed.

Fig.: 1 % agarose (NEEO, Art. No. 2267)

DNA ladder in lyophilised form. Gel loading buffer (Art. No. 0100.1) for dissolving the DNA and subsequent application on gels is supplied.

20 bp-DNA-Ladder

ready-to-use, not prestained

Size range: 20-200 bp
Number of fragments: 10
Number of lanes per ml: approx. 200 (mini gels)

Markers (DNA-gels)

Regular DNA ladder for the analysis of very small DNA fragments (left lane in figure).
The 100 bp fragment has been enhanced for easy analysis of the gel. All fragments are quantified, enabling quantitation of sample DNA in the gel. In order to avoid overlay of bands by bromophenol blue or xylene cyanol, Orange G was included as dye.

Directions for use

We recommend use of this ladder on the following special agaroses: High Resolution (Art. No. K297), HR-PLUS (Art. No. HP30), LM/PCR (Art. No. HP31), or an agarose with additional Synergel™ (Art. No. 0184). The 20 bp DNA-Ladder is highly compatible with the 100 bp DNA-Ladder *equimolar* (Art. No. T834). By combining both, a versatile ladder from 20 bp up to 1000 bp is obtained (right lane in figure).

Fig.: 1,4 % agarose (High Resolution, Art. No. K297) + 0,8 % Synergel™ (Art. No. 0184) in 1 x TAE.

Delivered in ready-to-use format for direct application to gels (conc.: 0,1 µg DNA/µl).

Storage temperature: –20 °C
Transport temperature: ambient temp.

Tips for Use of DNA Length Markers

- Storage: Store marker in small aliquots at –20 °C. One aliquot can be stored at +4 °C for permanent use.
- Application amount: Apply more marker when markers with higher band numbers are used. Applied amount can be reduced, however, for short separation distances. Application on polyacrylic amide gels may be reduced to ⅕ to ½ of the marker amount used for agarose gels.
- Fast running gels: Roth markers are established with respect to high separation efficiency even when applying high voltages. Be sure, however, to use sufficient and fresh gel running buffer made with water of good quality.
- "Falsely" running bands: Under extreme conditions, (e. g. high voltages, short running distances, salt content in the probes >150 mM) implausible results may occur, which are often caused by partial strand separation of the DNA. For amendments we recommend: a) Supplementation of the marker with restriction enzyme buffer in order to increase the salt content, b) use lower separation voltages, c) make sure to efficiently remove evolving heat, e. g. by cooling the gel prior to or during the run.

DNA Markers

100 bp-DNA-Ladder *equimolar*

lyophilised, not prestained

Size range: 100-1000 bp
Number of fragments: 11
Number of lanes per 100 µg: approx. 200 (mini gels)

Markers (DNA-gels)

Regular DNA Ladder for standard small fragment applications.
The individual bands of the ladder are present in the mixture in the same molar concentration (equimolar).

Tips for Estimating the Amount of DNA in Agarose Gels

- Please make sure to quantitatively dissolve the comparative DNA (e.g. the marker) in buffer, in order to obtain the full DNA-concentration.
- Allow the gel to run far enough so that the bands have adequate space, the DNA can then disperse in the bands and stain well.
- Stain the gel thoroughly – we recommend staining after the gel run. Staining the DNA by adding ethidium bromide to the agarose will not achieve an even distribution in the gel and is frequently not quantitative.
- Apply several lanes of comparative-DNA with different quantities so that various bands can be compared. A calibration curve may also be plotted to determine the exact concentration.
- For comparison it is best to use bands of similar size to your DNA (maximum ±50 % of the fragment length).
- Ethidium bromide is integrated much more effectively between the base pair stacks in linear DNA than in cyclic DNA. Therefore, please make sure that the conformation of the DNA whose concentration you wish to estimate is identical to that of the comparative DNA. In the event of cyclic DNA, i. e. isolated plasmids, cyclic DNA should also be used, e. g. plasmid-DNA pUC19 (Art. No. X911.1) or pBR322 (Art. No. X912.1). If you are using a DNA-marker as a comparative DNA and wish to measure cyclic DNA, you should initially linearize an aliquot of the DNA through restriction digestion and apply the preparation to the gel.
- In the event of a Lambda/Hind III marker: Do not use the 4.4 kb band of the marker for concentration analysis, as it is often not quantitatively present but coupled to the large fragment via the cos-site. Should you require the 4.4 kb band, please take care to heat the marker prior to applying (5 minutes at 65 °C).
- Only use the large marker fragments of a Lambda marker for concentration estimation when your fragments are in the same size range. Many visual systems do not depict the staining of the large bands proportionally to the DNA-amount.

Markers (DNA-gels)

Versatile DNA-marker combination for gels and DNA-fragments of different size.
The bands below 500 bp were enhanced aligning their intensity in the gel to the large fragments. The 500 bp band was specially enhanced for easy orientation in the gel.

Directions for use

DNA-ladder combi combines the advantages of the 100 bp ladder, equalized (Art. No. T833), with the versatile 1 kbp DNA-ladder (Art. No. Y014). Subsequently we now have a marker set that completely covers both the medium size range up to 10 kb (see figure of Art. No. Y014) as well as enabling clear size analysis in the small fragment range.
The two markers come in separate tubes to ensure high flexibility in the laboratory. They can, therefore, be used separately or combined.

Fig.: Gel mixture of 0,9 % Agarose + 0,5 % Synergel™ with (left to right): 0,4 µg 100 bp Ladder, equalized + 0,3 µg 1 kbp Ladder; 0,5 µg 1 kbp Ladder; 0,4 µg 100 bp Ladder, equalized.

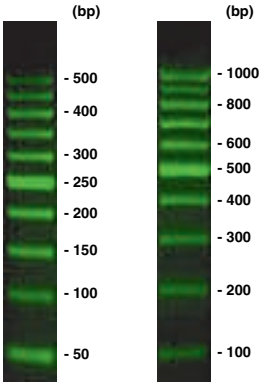
DNA ladder in lyophilised form. Gel loading buffer (Art. No. 0100.1) for dissolving the DNA and subsequent application on gels is supplied.

Storage temperature: –20 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Packaging	Pack.	€
CL22.1	1 set	20 µg+50 µg	plastic	145,15

The DNA-markers are supplied ready-to-use or in lyophilised form. Gel loading buffer for dissolving the lyophilised DNA-fragments is included. We use ROTI®Load DNA with glycerol (Art. No. 0100.1) as gel loading buffer. The dissolved markers are ready-to-use and can be applied to gels immediately.



Regular DNA Ladders with Fluorescent Dye

DNA-Marker, prestained

Markers (DNA-gels)

The bands of the marker are prestained with the fluorescent dye SYBR® Green I, which has been developed specifically for DNA analysis. The dye bounds to the minor groove of DNA and also intercalates into the DNA. It can be excited by UV- and blue light, making it fully compatible with standard UV-transilluminators as well as with modern blue-light illumination (see also ROTIPHORESE®PROfessional runVIEW, Art. No. 4849.1). When excited, the nucleic acid-bound dye emits a brightly coloured green fluorescence that may be documented by all usual broadband ethidium bromide filters or SYBR® Green foto filters.

Marker	50 bp-DNA-Ladder SYBR® Green	100 bp-DNA-Ladder SYBR® Green
Art. No.	1CN8 (fig. 1)	1CN9 (fig. 2)
Size range (bp)	50–500	100–1000
Number of fragments	10	10
Reinforced band at (bp)	250	500
Staining	fluorescent/green	fluorescent/green
Quantitation	possible	possible
Number of lanes in minigel	200/ml	200/ml
Delivery	ready-to-use	ready-to-use

Please note: Reliable size determination of unstained DNA fragments cannot performed using prestained markers.
In order to make the running distances comparable it is necessary to stain the DNA fragments, too. We recommend using the gel loading buffer ROTI®Load DNAstain SYBR® Green. The buffer contains – as well as the prestained ladders – the non-toxic fluorescent dye SYBR® Green, which is detectable with UV- and blue light.

► SYBR® Green DNA dye see page 49

ready-to-use

50 bp-DNA-Ladder SYBR® Green

ready-to-use, prestained with SYBR®Green DNA dye

Size range: 50-500 bp
Number of fragments: 10
Number of lanes per ml: approx. 200 (mini gels)

Regular DNA ladder for the analysis of small DNA fragments. Delivered in *ready-to-use* format for direct application to gels. The 250 bp fragment has been enhanced for easy analysis of the gel. Orange G was included as tracking dye.

Fig. : 3 % agarose

Wavelength

Excitation maximum (bound to DNA): 254 nm and 495 nm
Emission maximum (bound to DNA): 521 nm

The marker is an ideal addition to the gel loading buffer ROTI®Load DNAstain 3 SYBR® Green (Art. No. 1CN7).

Volume supplied: 52.5 ng DNA in 500 µl buffer solution

Storage temperature: –20 °C
Transport temperature: ambient temp.

①

② ③

PCR-Marker DNA*score*

lyophilised, not prestained

Size range: 500-1500 bp
Number of fragments: 7
Reinforced bands: 500 bp, 1000 bp, 1500 bp
Band for DNA quantitation: 1000 bp
Number of lanes per 100 µg: approx. 200 (mini gels)

Markers (DNA-gels)

Marker excellent for analysing PCR-fragments and for routine-analysis.
The 500 bp, 1000 bp and 1500 bp bands have been reinforced in their intensity for speedy and simple orientation. The special 1000 bp band allows the marker to be used for quantifying in gel.

Directions for use

Depending on the resolved segment, the marker changes its appearance (see **figure**).

Fig.: A) 1,0 cm: The marker shows three bands (500 bp, 1000 bp, 1500 bp).

B) 1,5 cm: Four satellite bands flank the 1000-bp-band.

C) 3-4 cm: All bands are resolved. Efficient size analysis of fragments with a difference of 50 bp is possible.

D) 6-7 cm: The marker can also be used for quantfying after approx. 6 cm run: the 1000-bp-band corresponds to 140 ng DNA (when loading 0,5 µg DNA-marker).

DNA-marker in lyophilised form. A short-run-optimised sample buffer (Art. No. 0099.1) for dissolving the DNA and subsequent application on gels is supplied.

Storage temperature: –20 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€
T917.1	50 µg	plastic	97,75

The DNA-ladders are supplied in lyophilised form. A short-run-optimised sample buffer for dissolving the lyophilised DNA-fragments is included (Art. No. 0099.1). The dissolved markers are ready-to-use and can be applied to gels immediately.

DNA-Marker short-run 1

lyophilised, not prestained

Size range: 500-2500 bp
Number of fragments: 5
Number of lanes per 100 µg: approx. 400 (mini gels)

Markers (DNA-gels)

The perfect DNA-marker for very short gel running distances and high-through-put approaches.
The fragment mass is optimised for very short runs. The 1500 bp fragment has been enhanced for easy analysis of the gel.

Directions for use

Best results are already obtained at 18 mm running distance in a 1,5 % agarose gel (see figure).

Fig.: 1,5 % agarose (NEEO, Art. No. 2267). Left – running distance 18 mm, Right – running distance 40 mm.

DNA-marker in lyophilised form. A short-run-optimised sample buffer (Art. No. 0099.1) for dissolving the DNA and subsequent application on gels is supplied.

Storage temperature: –20 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€
0146.1	50 µg	plastic	97,75

DNA-Marker short-run *extended*

lyophilised, not prestained

Size range: 100-6000 bp
Number of fragments: 9
Number of lanes per 100 µg: approx. 300 (mini gels)

Markers (DNA-gels)

DNA marker, optimised for all standard applications in the lab.
Due to the lesser number of fragment bands, the short-run, extended DNA-Marker separates very efficiently even on very short running distances, making it a versatile tool also for high-throughput and short-term electrophoresis.
The fragment mass is optimised for very short runs and the enhanced 1500 bp fragment provides easy orientation for analysis.

Directions for use

Best results are already obtained at 15 mm running distance / 7 minutes runtime in a 1,5 % agarose gel with 0,3 µg DNA loading per lane (see figure).

Fig.: Left – 1,5 % agarose (NEEO, Art. No. 2267), running distance 15 mm. Right – 1,2 % agarose, running distance 35 mm.

DNA-marker in lyophilised form. A short-run-optimised sample buffer (Art. No. 0099.1) for dissolving the DNA and subsequent application on gels is supplied.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Staining of Protein Gels

ROTH provides a large selection of high-quality staining kits and reagents for proteins, differing in their sensitivity and range of application.

Summary Staining of Protein Gels

Product	Sensitivity	Description
ROTI®Black P	1 ng/mm²	**Silver** staining kit. Highly sensitive. Simple, fast and reproducible.
ROTI®Blue	10 ng/mm²	**Coomassie**®-solution for colloidal staining of proteins. **Destaining not required**. Non-fixing staining for protein gel elution possible. Proteomics-compatible.
ROTI®Blue quick	10 ng/mm²	Solution for **rapid**, highly specific **staining** of proteins. **Destaining not required**. Non-fixing staining, compatible with blotting and Proteomics.
ROTIPHORESE®Blau R	50 ng/mm²	**Coomassie**® staining solution concentrate for rapid staining.
Coomassie® Blue G250 (C.I. 42655)	60 ng/mm²	Dye for performing Coomassie® staining. OD_{max} = 595
Coomassie® Blue R250 (C.I. 42660)	50 ng/mm²	Dye for performing Coomassie staining. OD_{max} = 550

Suitability of Protein Stainings

Coomassie® Gel Staining
Basics and mechanisms of Coomassie® dyes

ready-to-use

ROTI®Blue quick

1x conc., ready-to-use

For rapid, sensitive staining of protein gels.

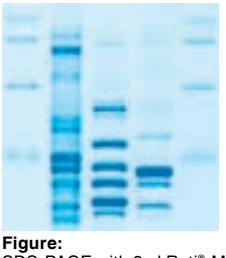

Figure:
SDS-PAGE with 3 µl Roti®-Mark Standard and samples.
Staining duration: 20 mins.

ROTI®Blue quick provides a new, very fast staining method for proteins in polyacrylamide gels. Due to the modern formulation, the dye binds highly specifically to proteins, but not to the gel matrix, hence eliminating the need to destain the gel. First bands are clearly visible within 3 minutes!

- Particularly fast, specific staining
- First bands are visible within 3 mins.
- No background – no destaining necessary
- Very simple application without heating, methanol, or acetic acid
- Stabilised for a longer shelf life

Directions for use

The following protein amounts / band can be detected in the specified time (minutes):
from 1 µg (3 min.)
from 100 ng (15 min.)
from 10 ng (60 min.)

The sensitivity of staining equals that of ROTI®Blue (Art. No. A152), so bands of 10 ng protein can be detected. ROTI®Blue quick is, therefore, approx. 5times more sensitive than standard Coomassie® staining solutions. ROTI®Blue quick staining is also fully compatible with usual down-stream applications like, membrane transfer & Western blotting, MS analysis (incl. MALDI) and protein gel elution.

1 l solution is sufficient for approx. 40 mini gels.

Storage temperature: +4 °C

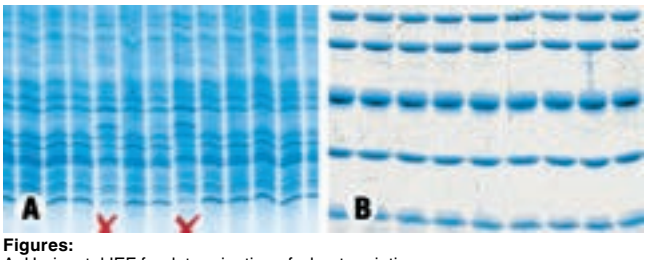
Staining of Protein Gels



ready-to-use

ROTI®Blue

5x conc.

Colloidal Coomassie® staining solution for protein gels.

Figures:
A: Horizontal IEF for determination of wheat-varieties.
With kind permission of R. Knoblauch, LTZ Referat 23, Karlsruhe
B: SDS-PAGE ROTI®Mark Standard.

ROTI®Blue is a colloidal Coomassie® brilliant blue G250 staining agent for proteins in polyacrylamid gels. Its colloidal features enable the staining agent to be bound to the proteins with high specificity and only minimally to the gel matrix. There is no longer any need for the extensive washing steps for background decoloring.

- Most simple application
- No destaining necessary
- 5x more sensitive than Coomassie® R 250

ROTI®Blue is approximately 5 x more sensitive than standard Coomassie® staining solutions. Staining time takes 2 to 12 hours depending on the desired band intensity.
Due to the fact that proteins may be stained without fixing the gel, membrane transfer and gel elution are still possible following staining. **Particularly well suited for staining prior to MS-analyses (e. g. MALDI) and prior to gel elution.**

1 l concentrated solution is sufficient for approx. 50 mini gels.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTIPHORESE®Blue R

ROTIPHORESE® concentrate

Brillant Blue R solution for Coomassie® staining of protein gels.

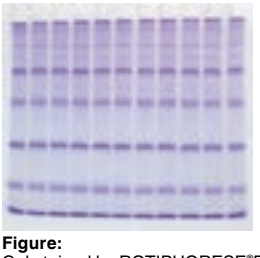

Figure:
Gel stained by ROTIPHORESE®Blue R, 12% PAA in Tris, ROTI®Mark STANDARD (Art. No. T851).

Concentrate for easy preparation of Coomassie® Blue R staining solutions.
ROTIPHORESE®Blue R is ideal for staining proteins in SDS-PAGE gels. It saves any tedious weighing of staining powder and having to prepare the mixture.

Directions for use

Concentrate contains Coomassie® Blue R, methanol and pure acetic acid. ROTIPHORESE®Blue R can be diluted directly in the bottle with 400 to 600 ml deionized water, resulting in the following composition depending on the dilution.

When diluted with 397,5 ml water (to a total of 1 litre staining solution):
Methanol (50 %), acetic acid 10 %, Coomassie® R (0,25 %)
When diluted with 507,5 ml water (to a total of 1,1 litre staining solution):
Methanol (45 %), acetic acid 9 %, Coomassie® R (0,22 %)
When diluted with 602,5 ml water (to a total of 1,2 litre staining solution):
Methanol (41,5 %), acetic acid 8,3 %, Coomassie® R (0,2 %).

We recommend mixing the concentrated solution well before dilution and filtering the diluted solution before application.

600 ml concentrated solution is sufficient for approx. 12 mini gels.

Staining of Protein Gels

ROTI®Black P

for electrophoresis

Silver staining kit for protein gels

ROTI®Black P is a kit for speedy, reproducible silver staining of proteins in free and foil-supported gels.

- Sensitive silver staining
- Transparent gel
- Reliable results

ROTI®Black P allows the detection of proteins from 1 ng/mm² due to its high sensitivity in combination with the very low background of the stained gels. Free gels can be stained without methanol, for carrier-supported gels methanol is required.

The ROTI®Black P Kit comes with an easy to follow protocol that guarantees you reliable results.

The kit contains

Sodium thiosulphate (Art. No. L534), silver nitrate (Art. No. L535), empty test tubes (Art. No. L536), formaldehyde (Art. No. L537), and sodium carbonate (Art. No. L538).
Contents of this Kit may not be bought separately.
Shipped without racket.

One kit is adequate for staining 10 gels.

UN no. 3316 · ADR 9 II · WGK 3

L533.2	1 kit	for 40 mini or 10 maxi gels	cardboard	117,20

Silver Staining of Proteins and DNA-Gels

ROTI®Black silver staining kits have been optimized to provide you with the most sensitive staining possible. Adding **thiosulphate** during the sensibilization and generation process reduces the background and increases contrast (acc. to Blum *et al.*, (1987) *Electrophoresis* 8:93-9). **Formaldehyde** should preferably be fresh when applied and it reduces the silver ions (Ag^+) to so-called silver seed crystals.

We recommend to:

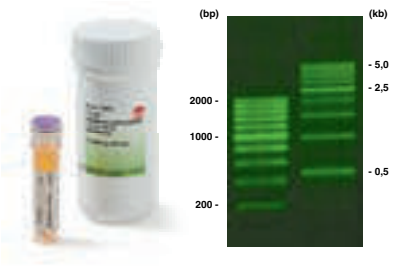
- Wash the gels carefully after each step otherwise there may be side reactions in the form of stains, spots, increased background or secondary bands.
- Fix the gels carefully. Inadequate fixation impairs band formation and increases the background. Fresh and high-quality fixatives should be used and adapted to the volume and duration of gel strength.

► Silver nitrate see www.carlroth.com

Safety data sheets

can be found on the Internet next to the product description.

Staining of DNA Gels



Nucleic acid dyes for agarose and acrylamide gels, for laboratories and practical applications. We offer you high-quality stains with high sensitivity (silver stains), standard stains (ethidium bromide) in user-friendly dropper bottles, and non-toxic fluorescent dyes for blue or UV light.

Summary Staining of Nucleic Acid in Gels

Product	Sensitivity	Description	Excitation
Ethidium bromide solution	1,5 ng/mm²	Standard **fluorescent** staining	254-330 nm, 500 nm UV- White light
SYBR® Green DNA dye	0,01 ng/band	Non-toxic, green **fluorescent** staining	254 nm and 495 nm UV- White light
ROTI®GelStain	1,5 ng/band	Non-toxic, green **fluorescent** staining	290-320 nm UV-light
ROTI®GelStain Red	1,5 ng/mm²	Non-toxic, red **fluorescent** staining	310 nm, 540 nm UV- and blue light
ROTI®Methylene blue staining concentrate	10 ng/mm²	Reversible, non-toxic **blue** staining	White light
ROTI®Black N	<0,1 ng/mm²	**Silver** staining of DNA polyacrylic amide gels	White light

Non-Toxic Fluorescent Staining of Nucleic Acids in Gels

Non-toxic and non-carcinogenic staining reagents for fluorescent staining of nucleic acids in agarose and polyacrylamide gels. Highly sensitive and applicable just like ethidium bromide.
The **ROTI®GelStain** dyes are added to the gel solution and the running buffer.
The fluorescent dye **SYBR®Green** is added directly to the loading buffer.
The **ROTI®Load DNAstain SYBR®Green** solutions already contain the dye and are thus ready-to-use loading buffers.
All dyes can be excited by UV light and blue light. Resulting signals may be detected by ethidium bromide broadband photo filters.

SYBR® Green DNA dye

Ethidium bromide substitutes

This is the DNA dye SYBR® Green I, a staining reagent for detection of double stranded nucleic acid in agarose and polyacrylamide gels. The dye is added directly to the DNA/loading buffer mixture and then loaded onto the gel.
SYBR® Green I bounds to the minor groove of DNA and intercalates into the DNA. Upon excitation it emits a bright green fluorescence. The sensitivity is up to 0.01 ng per band and is therefore 20 times higher than ethidium bromide.
SYBR® Green I has been developed specifically for gentle DNA analysis. DNA integrity is not influenced; hence, gel eluted DNA may directly be applied to standard down-stream applications, like, e.g., ligations, PCR, transformation, transfection etc. without interfering effects.

- Recommended for dsDNA
- Direct addition to DNA sample
- For excitation with UV light and blue light
- Non-toxic alternative for ethidium bromide
- Sensitivity (0,01 ng/band)

SYBR® Green DNA dye can be excited by UV- and blue light, making it fully compatible with standard UV-transilluminators as well as with modern blue-light illumination (see also ROTIPHORESE®PROfessional runVIEW, Art. No. 4849.1). The gels may be documented by all usual broadband ethidium bromide- or SYBR® Green foto filters.

Wavelength

Excitation maximum (bound to DNA): approx. 254 nm and 495 nm
Emission maximum (bound to DNA): 521 nm

ready-to-use

SYBR® Green DNA dye

11x conc., for electrophoresis, ready-to-use

For fluorescent staining of nucleic acids in agarose and polyacrylamide gels.

1.8 ml are sufficient for gel run and staining of approx. 3,600 lanes (5 µl sample + 0.5 µl dye).

Storage temperature: –20 °C
Transport temperature: ambient temp.

WGK 1

Each batch is functionally tested for its suitability in electrophoresis.

1CN2.2	9.0 ml	5 x 1.8 ml	plastic	104,20

ROTI®Load DNAstain SYBR® Green

Loading bufer with the fluorescent dye SYBR® Green I for staining of double stranded nucleic acid in agarose and polyacrylamide gels.

- Alternative for ethidium bromide, non-toxic, non-mutagen
- 20 times more sensitive than ethidium bromide, up to 0.01 ng nucleic acid per band
- For use with common broad-band ethidium bromide photo filters
- Excitation possible via UV light (254 nm) and blue light (495 nm)
- Compatible with all usual down-stream applications.

ROTI®Load DNAstain SYBR® Green is easy to use and reduces significantly the time required for gel analysis. The contained fluorescent dye SYBR® Green I detects up to 0.01 ng per band, and is, therefore, 20 times more sensitive than ethidium bromide. DNA integrity is not influenced by SYBR® Green I; hence, gel eluted DNA may directly be applied to standard down-stream applications, like, e.g., ligation, PCR, transformation, transfection etc. without interfering effects.
SYBR® Green I bounds to the minor groove of DNA and intercalates into the DNA. It can be excited by UV- and blue light, making it fully compatible with standard UV-transilluminators as well as with modern blue-light illumination (see also ROTIPHORESE®PROfessional runVIEW, Art. No. 4849.1).
When excited, nucleic acid-bound SYBR® Green I emits a brightly coloured green fluorescence (521 nm) that may be documented by all usual broadband ethidium bromide- or SYBR® Green foto filters.
The **figure** depicts 50 ng DNA per band, or 75 ng (1000 bp and 2.5 kb), respectively. Each lane has been loaded and concurrently stained using 1 µl ROTI®Load DNAstain SYBR® Green.

Wavelength

Excitation maximum (bound to DNA): 254 nm and 495 nm
Emission maximum (bound to DNA): 521 nm

ready-to-use

ROTI®Load DNAstain 1 SYBR® Green

6x conc., ready-to-use

DNA-gel loading buffer with fluorescent DNA-dye SYBR® Green.
For fragments >500 bp.

Directions for use

In order to cover the main size range needed in gel electrophoresis, ROTI®Load DNAstain 1 SYBR® Green contains bromophenol blue and xylene cyanol.

Glycerin is the standard reagent for increasing sample density.

Recommended for staining of dsDNA- and dsRNA-fragments of over 500 bp.

Contains: Tris, EDTA, bromophenol blue, xylencyanol, SYBR® Green, glycerol.
1.8 ml are sufficient for gel run and staining of approx. 1,800 lanes (5 µl sample + 1 µl loading buffer).

Storage temperature: –20 °C
Transport temperature: ambient temp.

Staining of DNA Gels

ROTI®GelStain

Ethidium bromide substitutes

Non-toxic and non-carcinogenic dyes for fluorescent staining of nucleic acids in agarose gels and polyacrylamide gels. Highly sensitive and applied just like ethidium bromide.

The ROTI®GelStain dyes are used as additives to the gel solution and the running buffer, partly also post-run staining is possible. Both ROTI®GelStain dyes can be excited by UV light, additionally, ROTI®GelStain Red may be excited by blue light. Resulting signals may be detected by ethidium bromide broadband photo filters.

ready-to-use | DNAse-free | RNAse-free

ROTI®GelStain Red

ready-to-use, DNAse-free, RNAse-free, for electrophoresis

Red fluorescent staining reagent for non-toxic staining of nucleic acids in agarose and polyacrylamide gels.

ROTI®-GelStain Red is a new, versatile staining reagent for detection of all nucleic acids in agarose and polyacrylamide gels.
Suitable for staining of dsDNA, ssDNA and RNA.

- Red fluorescence
- Alternative to ethidium bromide, non-toxic, non-mutagen
- Detection of > 0.3 ng nucleic acid per band
- Usuable with the same filters as ethidium bromide
- Excitation via UV light (310 nm) and blue light (540 nm)
- Compatible with all usual down-stream applications

ROTI®-GelStain Red is a new designed red fluorescent dye that can be used like ethidium bromide for staining in gel (addition to gel solution). Due to the low membrane permeability of the dye ROTI®-GelStain Red is non-mutagenic and non-toxic. It is suitable for staining of dsDNA, ssDNA and RNA.
ROTI®-GelStain detects up to 0,3 ng/mm² nucleic acid, i.e. below 0,1 ng per band, and is, therefore, more sensitive than ethidium bromide. Bound to nucleic acid it emits a brightly red fluorescence that can be documented by all usual ethidium bromide foto filters. ROTI®-GelStain Red is compatible with all usual down-stream applications.

Wavelength

Excitation maximum (bound to DNA): approx.310 nm and 540 nm
Emission maximum (bound to DNA): 630 nm

1 ml is sufficient for staining of approx. 600 minigels with 30 ml agarose volume each.

Storage temperature: +4 °C

Please note our **Technical Information Brochure** on the Internet next to the products:

Gel staining of nucleic acids
Background and mechanisms of the various stains

ready-to-use

ROTI®GelStain

ready-to-use, for electrophoresis

For non-toxic fluorescent staining of nucleic acids in agarose gels. Green fluorescence. Direct addition to the agarose solution.

ROTI®GelStain is a versatile staining reagent for detection of all nucleic acids in agarose gels.

- Green fluorescence
- Alternative for ethidium bromide, non-toxic, non-mutagen
- For dsDNA, ssDNA and RNA
- Nearly as sensitive as ethidium bromide (approx. 0.2 ng / band)
- For use with common broad-band ethidium bromide photo filters
- Excitation via UV light (302 nm) and blue light (490 nm)
- Compatible with all usual down-stream applications

The dye may be used exactly in the same way as ethidium bromide – for staining in-gel, staining through running buffer, or post-run staining –, and may replace this toxic and potentially mutagen reagent completely. ROTI®-GelStain detects up to 1,5 ng/mm² nucleic acid, which is approx. 0.2 ng per band, and is, therefore, nearly as sensitive as ethidium bromide.
When bound to nucleic acids in agarose gels, ROTI®-GelStain emits a brightly green fluorescence that may be documented by all usual broadband ethidium bromide or SYBR® Green foto filters.

ROTI®-GelStain is compatible with all standard down-stream applications and has been successfully tested for use with gel extraction, ligation, transformation and transfection.

Figure:
Amplicons of a mouse genotyping (left), and restriction digested DNA (right), respectively, separated in 2,5 and 1 % agarose ROTI®Garose NEEO with ROTI®GelStain (5 µl / 100 ml agarose). Pictures were taken using standard ethidium bromide photo filters.
With kind permission of Prof. R. Slany, Dept. of Genetics, Friedrich Alexander University, Erlangen.

Wavelength

Excitation maximum (bound to DNA): 302 nm (UV) and 490 nm (blue light)
Emission maximum (bound to DNA): 520 nm

1 ml is sufficient for staining of approx. 600 minigels with 30 ml agarose volume each.

Storage temperature: +4 °C

Ethidium Bromide

In spite of newly developed fluorescent staining reagents ethidium bromide remains the standard staining technic for nucleic acid in electrophoresis.
Ethidium bromide is a carcinogenic substance which shouldn't come in contact with skin. In order to minimise this danger we offer ready-to-use ethidium bromide solution in dropper bottles for easy handling and maximum safety.

Sekuroka® Decon-Bags

Carl ROTH.

Adsorber bags for removal of ethidium bromide from liquids.

Sekuroka® Decon-Bags are a simple method for removal of ethidium bromide from solutions.

- Reliable technique
- Very easy application
- Efficiency >99 %
- Capacity 2.5 mg/bag
- Bag size:5.5 x 2.2 cm
- Suitable for ethidium bromide, propidium iodide, PicoGreen® and SYBR® Green.

The bags contain a special type of activated carbon which absorbs ethidium bromide effectively and safely. One bag can absorb 2.5 mg ethidium bromide. Efficiency is >99 %.

Directions for use

Place the adsorber bag in the ethidium bromide solution, incubate for 24 hours under stirring and dispose of the bag as hazardous waste in accordance with local regulations.

Suitable for adsorption of ethidium bromide, propidium iodide, PicoGreen® and SYBR® Green.

Excitation maxima (unbound): 210 nm, 285 nm, 470 nm
Excitation maxima (bound to DNA): 330 nm, 500 nm, excitation possible via DNA at 254 nm
Emission maximum: 605 nm

ready-to-use

Ethidium bromide solution 0.025 % in dropper bottle

250 µg/ml in water, ready-to-use

For staining of DNA or RNA in agarose gels during electrophoresis.

Directions for use

Two drops will suffice for staining a 50 ml agarose gel. Add directly to melted agarose.

2 drops ethidium bromide solution on 50 ml melted agarose.
Store solution in the dark!

Colorimetric Staining of Nucleic Acids in Gels

ROTI®Black N

for electrophoresis

Silver staining kit for DNA-polyacrylamide gels

Kit for ultra-sensitive and reproducible staining of DNA in polyacrylamide gels.

- Ultra-sensitive
- Easy-to-follow guide
- Transparent gel

Detection limit for DNA is <0.1 ng/mm². ROTI®Black N is, therefore, an excellent alternative to using radioactivity or bioluminescent systems. ROTI®Black N results in an intensive staining of nucleic acids, yet the gel matrix remains highly transparent.

The ROTI®Black N Kit comes with an easy to follow protocol that guarantees you reliable results.

The kit contains

Silver nitrate (Art. No. N770), formaldehyde (Art. No. N771), sodium thiosulphate (Art. No. N772), sodium carbonate (Art. No. N774), and stop solution (Art. No. N773).
Contents of this Kit may not be bought separately. Shipped without racket.

One kit is adequate for staining 10 gels of 10 or 40 mls gel volume.

UN no. 3316 · ADR 9 II · WGK 3

ROTI®Methylene blue staining concentrate

200x conc.

For reversible staining of DNA in agarose gels

ROTI®Methylene blue staining concentrate was specially developed for sensitive staining of DNA in agarose gels. Sensitivity reaches up to 10 ng per band. Staining can be conducted in a simple staining bowl, a transilluminator is not required.

- Highly reversible alternative to ethidium bromide
- High sensivity (in minimum 10 ng/band)
- No transilluminator required
- Solution can be used repeatedly
- Sufficient for more than 50 mini gels

Mechanism

ROTI®Methylene blue staining concentrate binds to the negativly charged DNA backbone by salt bridges formed through quaternary ammonia complexes. The staining is very easy to remove by washing or replacement by salts.

Directions for use

For staining DNA agarose gels, DNA polyacrylamide gels, for reversible staining of Southern- and Northern-Blots.
Staining can be performed in a simple staining dish, a transilluminator is not required. The diluted staining solution can be used several times.

12 ml Roti®-methylene blue staining concentrate is sufficient for more than 50 mini gels.

Storage temperature: +4 °C

Horizontal Electrophoresis: Systems & Modules

A large range of different electrophoresis chambers for agarose or acrylamide gel electrophoresis is available

- Corrosion-free, gold-plated contacts. Conducting cables are linked directly to the safety lid, current flow is automatically stopped by opening the lid
- The safety lid can only be closed in one direction, a mix-up of orientation is excluded
- The platinum electrodes are protected by a special construction
- Our entire range of electrophoresis chambers is CE-certified
- For all chambers a wide range of accessories is available, such as combs, spacers and gel casting trays
- All gel casting trays are **UV-transparent**

Depending on the model, the gels can be cast directly in the chamber or on a special gel casting tray. The different combs can be adjusted in height and are available in three or four colour-coded thicknesses.

Suitable for	Agarose					Acetate	Agarose	

Convenient Gel Cooling System

Larger ROTIPHORESE®PROfessional units may be cooled by a highly efficient and very easy to applicate cooling system via precooled pads.

(1) Set cooling frame into buffer-filled chamber covering the gel
(2) Load gel and carefully apply precooled cool pack
(3) Side view
(4) Add lid and start gel run

Maximum sample size depends on the height of the gel. Rule of thumb (all values in mm):
Max. sample per well = Broadth of teeth x comb thickness x (gel height – 3)

PROfessional runVIEW Real-time Electrophoresis Under Blue Light

Complete electrophoresis system ROTIPHORESE® PROfessional runVIEW

All-in-one system for real-time electrophoresis:
unit, power supply and illuminator combined

Suitable for:

- Watch your bands migrate through the gel in blue light – without mutagen or retina damaging effects
- Recommended for use with SYBR®Green, ROTI®GelStain (green) and ROTI®GelStain Red (red), compatible with ethidium bromide and common alternatives such as SYBR® Green
- First choice for rapid gel analysis, gel elution and all control gels
- Suitable accessories are the runVIEW dark hood (Art. No. 1348.1) and the runDOC gel documentation system (Art. No. 1315.1).

Directions for use

Innovative, all-in-one system for electrophoresis – with integrated power supply and illuminator. Stained DNA is made visible during the run by excitation with blue light of 470 nm wave length and a special lid with integrated emission filter for green and red fluorescence. DNA stained during the run by SYBR® Green, ROTI®GelStain (green), ROTI®GelStain Red (red), ethidium bromide or another common replacement dye can be watched in real-time without having damaging effects caused by short wave lengths.
In this way, all work can be carried out directly on the laboratory bench. Transport of the gel is no longer necessary.

The compact arrangement of the devices and the simple control panel guarantee uncomplicated use. For high flexibility in application, gel trays with 7, 10 and 15 cm length are available. Also seven different combs in four thicknesses, including preparative combs with broad wells. For all accessories see electrophoresis unit ROTIPHORESE®PROfessional III (Art. No. 2850.1).

Technical specifications:

Units – horizontal

Electrophoresis Unit ROTIPHORESE® PROfessional II

ROTH SELECTION.

Gel chamber PROfessional II – First choice for all rapid routine analyses

- Electrophoresis chamber with accessories – ready for use
- Gel casting outside the chamber with gel casting gates
- Seven different combs available in four thicknesses, including preparative combs with broad wells
- Compatible with multi-channel pipettors (combs with 10 and 20 teeth)
- Gel trays with 7 and 10 cm length available
- For real-time electrophoresis upgradeable with ROTIPHORESE® PROfessional runVIEW Base MINI (Art. No. 9961.1)

Delivery incl. 1 horizontal gel chamber, 1 safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (10 × 10 cm) with 2 gel casting gates, 2 combs (1 mm, 16 teeth).

Units – horizontal

Electrophoresis Unit ROTIPHORESE® PROfessional V

ROTH SELECTION.

Gel chamber PROfessional V – for very long gels or high sample numbers, gel trays available in three different lengths

- Electrophoresis chamber with accessories – ready for use
- Gel casting outside the chamber
- For high flexibility in application: Gel trays with 16, 24 and 32 cm length available
- Compatible with multi-channel pipettors (combs with 20, 36, 40 teeth)
- With practical and easy-to-use gel cooling, independently of water supply or temperature baths

Delivery incl. 1 horizontal gel chamber, 1 safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (26 × 32 cm), 6 combs (1 mm, 28 teeth). For sealing of the tray during gel pouring we recommend to use the temperature stable Sekuroka®-adhesive tape, Art. No. L035.1, or our external casting unit **Flexicaster**, Art. No. 3688.1.

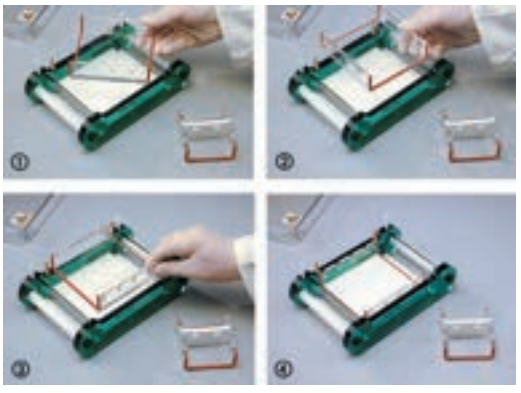
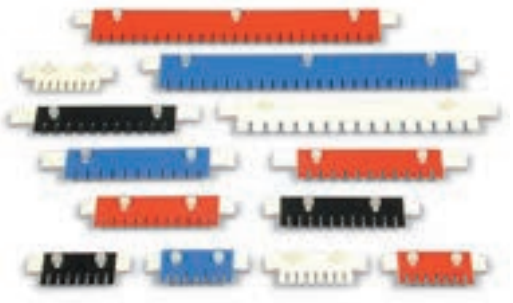
Electrophoresis Units



The Classic Line – compact Horizontal Electrophoresis Chambers

General features:



- High-grade quality
- Firmly standing
- Robust construction made of acrylic glass
- Chemically bonded contact points
- Platinum electrodes are protected by a special construction
- Wide range of accessories
- UV-transparent gel trays

Convenient in-Tank Gel Pouring

Big benefit: Several instruments of the classic line allow very convenient in-tank gel pouring – fast and definitely leak-proof.

(1) Remove the gel tray from the chamber. Turn the tray by 90°.
(2) Press the tray carefully into the chamber so that the silicone rubber forms a tight, leakfree seal with the walls of the chamber. Pour slightly precooled agarose into the tray.
(3) Allow the agarose to polymerise, then lift the tray from the chamber and insert it back by positioning it in the direction of the run.
(4) The gel is ready for sample loading and for electrophoresis.

Electrophoresis Unit MINI*easy*

ROTH SELECTION.

MINIeasy – small, complete gel chamber for speedy analysis with short running distance

- Electrophoresis chamber with accessories – ready for use
- Fully UV-transparent – application with UV transilluminator possible
- Low buffer quantity needed
- Tank-gel casting (casting tray cannot be removed)
- Cables with coloured, retractable sheaths
- In addition three different combs available in two different thicknesses

Technical specifications:

Art. No.	**N817.1**
Type	MINI*easy*
L x W, gel	10 cm × 8 cm
Max. number of samples	32
Comb positions	2
Buffer volume	50 ml
L x W x H, device	15 x 13.5 x 3 cm
Suitable for	Agarose

Delivery incl. horizontal gel chamber, safety lid with power leads (4 mm plugs), 2 gel casting gates, 2 combs (1.5 mm; 8 teeth).

Electrophoresis Unit MINI

ROTH SELECTION.

MINI gel chamber – for small gels with short separation distance

- Electrophoresis chamber with accessories – ready for use
- Gel casting possible in external casting unit MINI and directly in the chamber
- Cables with coloured, retractable sheaths
- In addition three different combs available in three different thicknesses
- Compatible with multi-channel pipettors (combs with 12 teeth)

Technical specifications:

Art. No.	**N562.1**
Type	MINI
L x W, gel	7.5 cm x 6 cm
Max. number of samples	32
Buffer volume	325 ml
L x W x H, device	24 x 13 x 6.5 cm
Suitable for	Agarose

Delivery incl. horizontal gel tank, safety lid with power leads (4 mm plugs), 1 removable gel casting tray, 2 combs (1 mm, 8 teeth).

Type	Art. No.	Pack Qty.	€
MINI	**N562.1**	1 unit(s)	989,00

Silicone Sealing Hose for horizontal gel casting trays

ROTH SELECTION.

For horizontal gel casting trays.

Electrophoresis Unit MIDI 1

ROTH SELECTION.

MIDI 1 gel chamber – for routine gels with medium separation distance

- Electrophoresis chamber with accessories – ready for use
- Gel casting possible in external casting unit MIDI 1 and directly in the chamber
- Cables with coloured, retractable sheaths
- In addition five different combs available in three different thicknesses
- Compatible with multi-channel pipettors (combs with 10 and 20 teeth)

Technical specifications:

Art. No.	N576.1
Type	MIDI 1
L x W, gel	11.5 cm x 10 cm
Max. number of samples	80
Comb positions	4
Buffer volume	450 ml
L x W x H, device	23 x 16.5 x 6.5 cm
Suitable for	Agarose

Delivery incl. horizontal gel tank, safety lid with power leads (4 mm plugs), 1 removable gel casting tray, 2 combs (1 mm, 16 teeth).

Type	Art. No.	Pack Qty.	€
MIDI 1	**N576.1**	1 unit(s)	1.097,60

Electrophoresis Unit MIDI PLUS

ROTH SELECTION.

MIDI PLUS gel chamber – gold standard for all routine gels in the lab

- Electrophoresis chamber with accessories – ready for use
- Gel casting outside the chamber with gel casting gates
- Buffer recirculation possible
- Cables with coloured, retractable sheaths
- In addition eight different combs available in three different thicknesses, including preparative combs with broad wells
- Compatible with multi-channel pipettors (combs with 16 and 30 teeth)

Technical specifications:

Art. No.	**HP70.1**
Type	MIDI PLUS
L x W, gel	15 cm × 15 cm
Max. number of samples	120
Comb positions	4
Buffer volume	1200 ml
L x W x H, device	33.5 x 21.5 x 7 cm
Suitable for	Agarose

Delivery incl. horizontal gel chamber, safety lid with power leads (4 mm plugs), 2 connections for buffer recirculation, 1 removable gel casting tray with 2 gel casting gates, 2 combs (1 mm, 16 teeth).

Type	Art. No.	Pack Qty.	€

Electrophoresis Unit VARIA

ROTH SELECTION.

VARIA 1 gel chamber – greatest flexibility in application due to four gel trays of different lengths

- Electrophoresis chamber with accessories – ready for use
- For agarose gels with lengths of 7/10/15/20 cm:
  7 x 15 cm / max. 60 samples at 2 comb positions
  10 x 15 cm / max. 90 samples at 3 comb positions
  15 x 15 cm / max. 120 samples at 4 comb positions
  20 x 15 cm / max. 180 samples at 6 comb positions
- Gel casting outside the chamber with gel casting gates
- Asymmetric electrode offset preventing accidental polarity reversal
- Buffer recirculation possible
- Cables with coloured, retractable sheaths
- In addition four different combs available with up to three different thicknesses
- Developed by Scientists for Scientists

Technical specifications:

Art. No.	**AE17.1**
Type	VARIA 1
L x W, gel	7 cm x 15 cm, 15 cm x 10 cm, 15 cm x 15 cm, 15 cm x 20 cm
Max. number of samples	180
Comb positions	6
Buffer volume	700 ml
L x W x H, device	31.5 x 19 x 7 cm
Suitable for	Agarose

Delivery incl. horizontal gel tank, safety lid with power leads (4 mm plugs), two connections for buffer circulation, two gel casting gates, four removable gel casting trays of 7, 10, 15 and 20 cm length, respectively, two combs (1 mm, 15 teeth).

Electrophoresis Unit MIDI 2

ROTH SELECTION.

MIDI 2 gel chamber – optimised for large standard gels or higher sample numbers

- Electrophoresis chamber with accessories – ready for use
- Gel casting outside the chamber with gel casting gates
- Buffer recirculation possible
- Cables with coloured, retractable sheaths
- In addition four different combs available in three different thicknesses
- Compatible with multi-channel pipettors (combs with 20 and 40 teeth)

Technical specifications:

Art. No.	N596.1	N618.1
Type	MIDI 2 standard version	MIDI 2 with cooled base plate
L x W, gel	20 cm x 20 cm	
Max. number of samples	160	
Comb positions	4	
Buffer volume	2200 ml	
L x W x H, device	47.5 x 27 x 8 cm	
Suitable for	Agarose	

Delivery incl. horizontal gel tank, safety lid with power leads (4 mm plugs), 2 connections for buffer recirculation, 1 removable gel casting tray, 2 gel casting gates, 2 combs (1 mm, 16 teeth).

Electrophoresis Unit MAXI

ROTH SELECTION.

MAXI gel chamber – optimised for very high sample numbers and for long separation distance

- Electrophoresis chamber with accessories – ready for use
- Gel casting outside the chamber with gel casting gates
- Buffer recirculation possible
- Cables with coloured, retractable sheaths
- In addition two different combs available in three thicknesses
- All combs are compatible with multi-channel pipettors

Technical specifications:

Art. No.	N610.1	N619.1
Type	MAXI standard model	MAXI with cooled base plate
L x W, gel	30 cm x 25 cm	
Max. number of samples	624	
Comb positions	12	
Buffer volume	3000 ml	
L x W x H, device	56 x 33 x 9 cm	
Suitable for	Agarose	

Delivery incl. horizontal gel tank, safety lid with power leads (4 mm plugs), 2 connections for buffer recirculation, 1 removable gel casting tray, 2 gel casting gates, 6 combs (1 mm, 26 teeth).

Type	Art. No.	Pack Qty.	€

Units – horizontal

Flat Bed Electrophoresis Unit MULTI

For all precast horizontal gels and for Iso Electric Focussing (IEF)

General features:

- For high voltage electrophoresis up to 5000 Volt
- Variable applications using tank mounted electrodes or adjustable electrodes for wicked horizontal gels/IEF
- Including cooling unit and buffer drainage system
- Number of samples varies with application
- Superior separation quality and robust construction

We recommend using Circulation Cooler Accel 250 (Art. No. PE51.1) and Power Supply EV 3330 (Art. No. A541.1).

Technical specifications:

Art. No.	**CP51.1**
Type	MULTI
L x W, gel	25 cm x 25 cm
L x W x H, device	46 x 41 x 11.5 cm
Weight	9,6 kg
Suitable for	Agarose, IEF, Membrane

Delivery incl. horizontal flat bed electrophoresis chamber with buffer chambers and integral electrodes, safety lid, one removable ceramic cooling plate (27 x 27 cm), one glass electrode frame, one adjustable anode- and cathode electrode, glass electrode weight, drainage tubing (outer Ø 12 mm), cable set (2 mm plug) and adapter pair for 4 mm socket.

Flat Bed Electrophoresis Unit MULTI

ROTH SELECTION.

Type	Art. No.	Pack Qty.	€
Glass electrode frame	**CP55.1**	1 unit(s)	347,25

Electrode MULTI

ROTH SELECTION.
Replacement electrode for flat bed electrophoresis unit MULTI (Art. No. CP51.1).

Type	Art. No.	Pack Qty.	€
Anode electrode	**CP52.1**	1 unit(s)	330,05
Cathode electrode	**CP53.1**	1 unit(s)	330,05

Vertical Electrophoresis Systems & Modules

Safety lid with integral power leads
Orientation cannot be mixed up as the lid can only be closed if properly used. Power supply is automatically interrupted when lid is opened.

Platinum electrodes – gold-plated, corrosion-free contacts
Electrodes are made of pure platinum. They are protected by a special construction and can be replaced easily by the user.

Colour coding of spacers and combs
Regular colour coding of spacers and combs facilitates selection of the right tool during gel preparation, preventing assembly of wrong components.

- Simultaneous electrophoresis of minimum two gels
- Inner buffer volume ensures even distribution of heat in gel and prevents “smiling”
- Gel casting module enables speedy and simultaneous casting of two gels
- **Suitable for standard ready-to-use gels**

Wide field of application:

- Separation of proteins, nucleic acids and peptides
- Isoelectric focussing
- Electro-transfer of proteins and nucleic acids

Colour coding of the combs and spacers

Colour	Thickness	Application
violet	0,5 mm	for ultra finely resolved bands
black	0,75 mm	for finely resolved bands
white	1,0 mm	standard
red	1,5 mm	for bigger sample volumina and gels of 2nd dimension
blue	2,0 mm	for big sample volumina and preparative gels

► Q-PAGE™ ready-made gels, compatible with Roth’ vertical units, see www.carlroth.com

Units – vertical

Electrophoresis Unit ROTIPHORESE®

The PROclamp Line – vertical Double Electrophoresis Units with Clamping System
The fast-clamping technique allows rapid and easy-to-handle insertion of glass plates and ready-made gels.

General features:

- **For running of up to 4 gels in parallel**
- Extensive range of accessories incl. glass plates with fixed spacers and suitable blotting modules available
- Colour coded spacers and combs in up to 5 thicknesses available – 0,5 up to 2 mm
- Compatible with multi-channel pipettors (combs are marked *)
- Effective buffer cooling independent of running water or chillers
- **Modular system:** Tanks are compatible with different electrophoresis modules, keeping costs and space to a minimum.

Technical specifications:

Art. No.	5769.1	3501.1	3502.1	3503.1	1395.1
Type	PROclamp MAXI	PROclamp MINI complete set	PROclamp MINI set with accessories	PROclamp MINI set for precast gels	PROclamp MINI Wide
L x W, glass plate	20 x 20 cm	10 x 10 cm			10 x 20 cm
Max. number of samples	192	80			192
Buffer volume	640 / 1000 ml	100 / 300 ml			250 / 600 ml
L x W x H, device	18 x 30 x 27 cm	13 x 19 x 15 cm			16 x 26 x 16 cm
Suitable for	Polyacrylamide gels				

Tight and leak-proof insertion of glass plates in seconds – by modern **fast-clamping techniques**: (MINI: clamps, MAXI: waves):
(1) Position running module on bench surface
(2) Insert glass plates (incl. spacers) from above
(3) Tighten clamps – Ready-to-go!

► Q-PAGE™ ready-made gels, compatible with Roth' vertical units www.carlroth.com

Electrophoresis Unit ROTIPHORESE® PROclamp MINI

ROTH SELECTION.

Electrophoresis Unit ROTIPHORESE® PROclamp MINI

- Electrophoresis chamber with accessories – ready for use
- Compatible with all major brands of 10 × 10 cm precast gels
- With fast-clamping technique
- Up to 20 samples per gel
- Effective buffer cooling independent of running water or chillers

Delivery incl. 1 vertical electrophoresis chamber incl. buffer tank, safety lid and 2 cables (4 mm plugs), 1 running module, 1 dummy plate for run of one gel only, 1 gel cooling pack.
For run of 3 or 4 gels, please additionally order PROclamp MINI notched glass plates with fixed spacers (e.g. thickness 1 mm, Art. No. 3563.1) and suitable combs (e.g. Art. No. 3638.1).

Complete Set
Additionally included: 2 glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 2 combs (thickness 1 mm, 12 wells), 1 gel opener, 1 gel casting module for rapid and leak-proof gel casting.

Set with Accessories
Additionally included: 2 glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 2 combs (thickness 1 mm, 12 wells), 1 gel opener.

Set for precast gels
Without further accessories. When using precast gels only a maximum of 2 gels can be run simultaneously.

Electrophoresis Unit ROTIPHORESE® PROclamp MINI Wide

ROTH SELECTION.

Electrophoresis Unit ROTIPHORESE® PROclamp MINI Wide

- Electrophoresis chamber with accessories – ready for use
- For vertical electrophoresis of wide mini gels (20 × 10 cm)
- Innovative new wave-screw-clamp technology
- Up to 48 samples per gel (capacity equivalent to 2 mini gels)
- Effective buffer cooling independent of running water or chillers

Delivery incl. 1 vertical electrophoresis unit consisting of buffer tank, safety lid and 2 cables (4 mm plugs), 1 running module, 1 gel cooling pack.

Additionally included: 2 standard glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 1 dummy plate (for run of one gel only), 2 combs (thickness 1 mm, 24 wells), 4 yellow wave-clamps for electrophoresis of 3 or 4 gels (substitute green clamps), 1 gel casting module.
For the run of 3 or 4 gels, please additionally order PROclamp MINI Wide notched glass plates with fixed spacers (e. g. thickness 1 mm, Art. No. 1427.1) and suitable combs (e. g. Art. No. 5957.1).

Electrophoresis Unit ROTIPHORESE® PROclamp MAXI

ROTH SELECTION.

Electrophoresis Unit ROTIPHORESE® PROclamp MAXI

- Electrophoresis chamber with accessories – ready for use
- For large-format vertical gel electrophoresis (20 x 20 cm)
- Innovative new wave-screw-clamp technology
- Up to 48 samples per gel
- Detachable inner cooling coil for optional cooling

Delivery incl. 1 vertical electrophoresis chamber consisting of buffer tank, safety lid and 2 cables (4 mm plugs), 1 running module, 1 detachable cooling coil.
For run of 3 or 4 gels, please additionally order PROclamp MAXI notched glass plates with fixed spacers (e.g. thickness 1 mm, Art. No. 5906.1) and suitable combs (e.g. Art. No. 5957.1).

Accessories included: 2 standard glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 1 dummy plate (for run of one gel only), 2 combs (thickness 1 mm, 24 wells), 4 yellow wave-clamps for electrophoresis with 3 or 4 gels (substitute green clamps), 1 gel casting module for rapid and leak-proof gel casting.

*Compatibel with multi-channel pipettors

**Combs with extremely wide wells (for preparative gels)

Units – vertical

Electrophoresis Unit

The Classic Line – compact Vertical Double Electrophoresis Chambers with Glass Plate Stops

General features:

Modular system

Tanks are compatible with different electrophoresis modules, keeping costs and space to a minimum. The electrophoresis units are available as *standard* and as *coolable* device.

- **For running of up to 2 gels in parallel**
- High-grade quality and robust, made of acrylic glass
- With glass plate stops
- Chemically bonded contact points
- Wide range of accessories
- Coolable versions with reliable water cooled system

Different versions of MINI and MAXI vertical dual plate electrophoresis chambers are available. **The full version** includes the buffer tank (*standard* or *coolable*), the running module for gel run and a gel casting module including glass plates and combs for immediate electrophoresis.

Technical specifications:

Units – vertical

Electrophoresis Unit MINI Vertical

ROTH SELECTION.

Electrophoresis Unit MINI Vertical

- Electrophoresis chamber with accessories – ready for use
- Compatible with most 10 x 10 cm to 8 x 10 cm ready-made gels (max. width 10.0 cm)
- The coolable models are cooled by a cooling coil in the unit.
- Cables with coloured, retractable sheaths

Delivery incl. 1 vertical electrophoresis chamber – with buffer tank, lid incl. cables (4 mm plug), 1 running module for simultaneous electrophoresis of two gels.

Accessories included: 2 glass plates, 2 separate spacer pairs (spacer thickness 1 mm), 2 notched glass plates, 1 dummy plate (for electrophoresis of one gel only), 2 combs (12 teeth, 1 mm thick).

Devices with additional Gel casting module: The device types standard (Art. No. Y001.1) and coolable (Art. No. Y002.1) additionally include a gel casting module.

Electrophoresis Unit MAXI Vertical

ROTH SELECTION.

Electrophoresis Unit MAXI Vertical

- Electrophoresis chamber with accessories – ready for use
- Compatible with most 20 x 20 cm ready-made gels
- The coolable models are cooled by a cooling coil in the unit.
- Cables with coloured, retractable sheaths

Delivery incl. 1 vertical electrophoresis chamber – with buffer tank, lid incl. cables (4 mm plug), 1 running module for simultaneous electrophoresis with two gels.

Accessories included: 2 glass plates, 2 separate spacer pairs (spacer thickness 1 mm), 2 notched glass plates, 1 dummy plate (for electrophoresis of one gel only), 2 combs (24 teeth, 1 mm thick).

Gel casting module: The device types standard (Art. No. X950.1) and coolable (Art. No. X951.1) additionally include a gel casting module.

Type	Additional info	Art. No.	Pack Qty.	€
MAXI Vertical coolable model with reliable water cooling	with buffer tank incl. cooling coil, running module, accessories and gel casting module	**X951.1**	1 unit(s)	3.575,45
MAXI Vertical coolable model with reliable water cooling, without gel casting module	with buffer tank incl. cooling coil, running module and accessories	**X953.1**	1 unit(s)	3.309,95
MAXI Vertical standard model	with buffer tank, running module, accessories and gel casting module	**X950.1**	1 unit(s)	3.548,60
MAXI Vertical standard model, without gel casting module	with buffer tank, running module and accessories	**X952.1**	1 unit(s)	3.086,35

Sequencing Electrophoresis Unit

For SSCP-gels, DDRT-PCR analyses, and extra long protein gels

General features:

- Electrophoresis chamber with accessories – ready for use
- Safety cover with integral connectors
- User-replaceable electrodes made of pure platinum
- Removable lower buffer tank for easy cleaning
- Accessories may be bought separately
- Heavy duty aluminium back plate helps disperse heat evenly
- Optional thermostatic fan kit
- CE certified

Technical specifications:

Art. No.	AE28.1
Type	Sequencing Electrophoresis Unit
L x W, glass plate	45 x 33 cm
Max. number of samples	96
Buffer volume	500 / 500 ml
L x W x H, device	21.5 x 50 x 63 cm
Suitable for	Polyacrylamide gels

Delivery incl. 1 chamber with safety lid and integral power leads (2 mm plugs), 1 set of glass plates (1× plain, 1× notched) 1 pair of spacers (0,35 mm), 1 sharktooth comb (0,35 mm, 48 teeth).

Power Supplies

Power Supply EV Series

Low cost power supplies for all applications
The upgraded Consort series with new design – powerful, easy to operate and low priced.

General features:

- Small and compact devices
- On screen help in 4 languages for application and for solving errors
- Automatic cross-over to show which of the 3 parameters (V, mA, W) is kept constant during the run
- Automatic recovery after power failure
- Connection of up to 4 units possible (4 mm sockets)
- Password protection
- High safety standard
- 3 years warranty

Other properties of the devices (with the exception of EV0200):

- Storing of up to 9 methods possible
- Timer Mode
- Setting of a voltage gradient (Voltage Ramp Mode)
- Data logging of electrophoresis runs (of about 100 hours)
- Firmware updates via USB interface possible
- Remote control by PC possible

Power Supply EV Series EV2310

Consort.

Suitable for

(formerly EV231)
For horizontal and vertical gels, for blotting and for mini gel applications.

Technical specifications:

Art. No.	A545.1
Type	EV2310
Voltage range	0–300 V
Current	1000 mA
Performance	150 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	grafical
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	10 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	24 x 20 x 13 cm
Weight	6 kg
Mains connection	210–250 V, 50/60 Hz, 200 W

Type	Art. No.	Pack Qty.	€
EV2310	**A545.1**	1 unit(s)	999,75

Power Supply EV Series EV2650

Consort.

Suitable for

(formerly EV265)
For horizontal and vertical gels and for electro-elution. Particularly suited for electrophoresis with multiple units.

Technical specifications:

Art. No.	A544.1
Type	EV2650
Voltage range	0–600 V
Current	500 mA
Performance	150 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	grafical
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	30 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	24 x 20 x 13 cm
Weight	6 kg
Mains connection	210–250 V, 50/60 Hz, 200 W

Type	Art. No.	Pack Qty.	€
EV2650	**A544.1**	1 unit(s)	999,75

Power Supplies

Power Supply EV Series EV3020

Consort.

Suitable for

(formerly EV202)
For tank and semi-dry blotting.

Technical specifications:

Art. No.	A543.1
Type	EV3020
Voltage range	0–300 V
Current	2000 mA
Performance	300 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	LCD, 2 x 16 characters
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	5 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	31 x 26 x 13 cm
Weight	10 kg
Mains connection	210–250 V, 50/60 Hz, 360 W

Type	Art. No.	Pack Qty.	€
EV3020	**A543.1**	1 unit(s)	1.440,50

Power Supply EV Series EV3150

Consort.

Suitable for

(formerly EV215)
Optimal for isoelectric focussing and DNA-sequencing.

Technical specifications:

Art. No.	A542.1
Type	EV3150
Voltage range	0–1200 V
Current	500 mA
Performance	300 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	LCD, 2 x 16 characters
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	70 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	31 x 26 x 13 cm
Weight	10 kg
Mains connection	210–250 V, 50/60 Hz, 360 W

Type	Art. No.	Pack Qty.	€
EV3150	**A542.1**	1 unit(s)	1.440,50

► Cables and adapters for electrophoresis units and blotters see page 90

Power Supply EV Series EV3330

Consort.

Suitable for

(formerly EV233)
Optimal for DNA-sequencing and IEF using flat bed units.

Technical specifications:

Art. No.	A541.1
Type	EV3330
Voltage range	0–3000 V
Current	300 mA
Performance	300 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	LCD, 2 x 16 characters
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm (deep)
Min. load resistance	600 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	31 x 26 x 13 cm
Weight	10 kg
Mains connection	210–250 V, 50/60 Hz, 360 W

Delivery incl. Adapter pair 4 mm plug/4 mm socket; adapter pair 4 mm plug/2 mm socket.

Type	Art. No.	Pack Qty.	€
EV3330	**A541.1**	1 unit(s)	2.150,00

Power Supply EV Series EV3610

Consort.

Suitable for

(formerly EV261)
Versatile Power Supply, suitable for horizontal and vertical gels, for electro-elution, for minigel-blotting and for Comet Assays.

Technical specifications:

Art. No.	2804.1
Type	EV3610
Voltage range	0–600 V
Current	1000 mA
Performance	300 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	LCD, 2 x 16 characters
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	15 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	31 x 26 x 13 cm
Weight	10 kg
Mains connection	210–250 V, 50/60 Hz, 360 W

Type	Art. No.	Pack Qty.	€
EV3610	**2804.1**	1 unit(s)	1.440,50

Power Supply EV Series EV3620

Consort.

Suitable for

For isoelectric focusing and for DNA sequencing. Optimal for long vertical gels.

Technical specifications:

Art. No.	1300.1
Type	EV3620
Voltage range	0–6000 V
Current	150 mA
Performance	300 W
Volt-hours	0–99,99 kVh
Timer display	0–99,59 h
Display type	LCD, 2 x 16 characters
Resolution	1 V, 1 mA, 1 W
Program	9 x 9 parameter settings
Connection	Outlets: 4, Parallel socket pairs: 4 mm
Min. load resistance	1,200 Ohm
Safety devices	Leak recognition
Ambient temperature	0–40 °C
W x D x H	31 x 26 x 13 cm
Weight	10 kg
Mains connection	210–250 V, 50/60 Hz, 360 W

Type	Art. No.	Pack Qty.	€
EV3620	**1300.1**	1 unit(s)	2.150,00

ROTH Power Supplies

The Carl ROTH series – mature technology in modern design
Three units for all applications in electrophoresis:
MINI, STANDARD and BLOT.

- Compact and easy to operate
- Constant parameters
- Timer with alarm function
- Comply to all relevant safety standards
- 1 year warranty

Technical specifications:

Art. No.	2907.1	2908.1	2909.1
Type	MINI (nanoPAC-300P)	STANDARD (PowerPro3200)	BLOT (PowerPro3AMP)
Voltage range	10–300 V	5–300 V	
Current	1–400 mA	1–700 mA	10–3000 mA
Performance	60 W	150 W	300 W
Volt-hours	49,995 kVh		
Timer display	1–1999 min		
Display type	LED	2,4″TFT	
Resolution	1 V, 1 mA		1 V, 10 mA, 1 W
Unit of measurement	Constant V or mA with automatic crossover	Constant V or mA with automatic crossover During constant mode not adjusted parameters are automatically set to maximum	
Program	Manually adjustable (Constant Mode), 2-step program, editable, 2-step program, pre-assigned	Manually adjustable (Constant Mode), 30 programs, each with up to 6 steps editable (Program Mode), Pre-assigned programs for different applications (Typical running condition Mode)	
Connection	Outlets: 2, Parallel socket pairs: 4 mm	Outlets: 5, Parallel socket pairs: 4 mm	
Min. load resistance	5 Ohm	3 Ohm	0.1 Ohm
Safety devices	Detection of "no load", overload and overheating	Detection of "No load" "Over load" and "Leakage" Protection against overheating Automatic recovery after power failure	
Ambient temperature	4–40 °C		
Approval	CE, ETL, FCC	CE, ETL	CE
W x D x H	14 x 19.1 x 8.4 cm	21.5 x 33.5 x 10.4 cm	
Weight	1,0 kg	2,1 kg	
Mains connection	100–240 V, 50/60 Hz, 2,5 A	100–240 V, 47–60 Hz, 200 W	100–240 V, 47–60 Hz, 410 W

ROTH Power Supply MINI

ROTH SELECTION.

For horizontal mini gels, rapid analyses of nucleic acids and for students courses.
Connection with up to 2 units possible.

Type	Art. No.	Pack Qty.	€
MINI (nanoPAC-300P)	**2907.1**	1 unit(s)	638,55

Power Supplies

ROTH Power Supply STANDARD

ROTH SELECTION.

For standard applications, all middle sized horizontal gels (routine gels) and for vertical mini gels. Suitable for cold-room operation.

Power Pro models (Roth STANDARD and Roth BLOT):

- Up to 30 individual protocols with 1–6 steps savable
- Pre-programmed options for special applications
- Connection with up to 5 units possible.

Type	Art. No.	Pack Qty.	€
STANDARD (PowerPro3200)	**2908.1**	1 unit(s)	827,75

ROTH Power Supply BLOT

ROTH SELECTION.

For large dimension horizontal gels, vertical maxi gels (e.g. 20 x 20 cm) and blotting. For high flexibility in application. Connection with up to 5 units possible. IQ/OQ protocols possible. Suitable for cold-room operation.

Power Pro models (Roth STANDARD and Roth BLOT):

- Up to 30 individual protocols with 1–6 steps savable
- Pre-programmed options for special applications
- Connection with up to 5 units possible.

Type	Art. No.	Pack Qty.	€
BLOT (PowerPro3AMP)	**2909.1**	1 unit(s)	1.542,65

When connecting several units, a higher voltage must be applied in order to attain the same intensity of current and output and, subsequently, the same separating capacity.

Accessories

Electrophoresis cables

Replacement cables for destroyed and functionless cable pairs. Adaptable to all electrophoresis units and power supplies with adapter pairs T843, K294 and K295.

Electrophoresis cables for electrophoresis units

ROTH SELECTION.

- Suitable for all common electrophoresis units
- Suitable up to 1000 volt
- Cable length: 1 m

Application:

Pic.	Type	Ø Bushing (mm)	Ø Connector (mm)	Art. No.	Pack Qty.	€
(1)	Classic Line	4	4	**N843.1**	1 pair	152,90
(2)	Rotiphorese® PROfessional	4	4	**6848.1**	1 pair	79,10

Electrophoresis cables for semi dry blotters

ROTH SELECTION.

- Suitable for all common Semi Dry Blotters
- Suitable up to 1000 Volt
- Cable length: 1 m
- Narrow socket sheaths

Gradient Mixer

For preparing polyacrylic amide gel gradients or centrifugation gradients (sucrose or caesium chloride gradients).

These stable and easy to use gradient mixers are made of an acrylic block.
They consist of two chambers, a storage chamber and a mixing chamber with connecting valve. A second valve regulates the outflow from the chamber. A magnetic rod can be inserted into the mixing chamber. With a magnetic stirrer, an even mixture and a constant gradient are created.
The mixers have a flat underside. A rod on the back serves to fasten a holding device.

Connection for 4 mm FEP- tubes.

Gel Multi Caster ROTIPHORESE®

Multiple gel casting systems, tailored for use with ROTIPHORESE® PROclamp vertical electrophoresis units (10 × 10 cm gel glass plates).

The number or the thickness of gels being poured is variable. After pouring the glass plates can be easily separated by the included separation sheets. With level bubble for optimal levelling of gels.

Directions for use

If required, fewer gels can be poured using the spacer plates supplied with each system in order to adjust the volume.

Delivery incl. gel casting chamber, 1 bottom silicone gasket for top filling, 1 level bubble, 1 clip, 12 separation sheets, 6 or 9 spacer plates with different diameters: 1 × 12 mm, 5 × 5 mm, 3 × 3 mm.

Gel and Membrane Support FlowMesh™

Permeable support mesh for gels and filter membranes. Sturdy, versatile, and convenient. Re-usable and easily cut to size.

Suitable, for example, for:

- **Gel support** – Place FlowMesh™ above or below a gel to protect from tearing, bending, or folding. May be used during gel staining, destaining, probing, equilibration etc.
- **Spacing** – Use FlowMesh™ as permeable spacer for separation of gels and membranes during stacking.
- **Membrane stabilisation** – Use on one or both sides of membranes during storage or hybridisation, while keeping the membrane fully accessible for blocking, probing and washing.

FlowMesh™ is made of polypropylene mesh approximately 0.3 mm thick with 1 mm strand spacings and approx. 70 % void volume. Between two flat sheets separated by FlowMesh™ is 2.7 ml/100 cm^2 void volume.

Gel Documentation System for runVIEW

Gel documentation system ROTIPHORESE® runDOC

Gel documentation system for the Professional runVIEW real-time electrophoresis system.

It comprises:

- Darkroom hood
- Digital camera (18.0 MP)
- One filter each for green and red fluorescence

The darkroom hood fits exactly to the runVIEW gel unit. After excitation by the blue light illuminator of the runVIEW base station the fluorescent gel bands are made visible by the filter slide integrated in the darkroom hood. Subsequently, they can be documented by the integrated camera.

Technical specifications:

Art. No.	**1315.1**
Type	Gel documentation system ROTIPHORESE® runDOC
Version	5× optical / 4× digital zoom DIGIC-5 processor
Resolution	640 × 480 – 400 × 3000 Pixel
Number of pixels	12.1 (MP)
Photosensor	1/1.7″ type high sensitivity CMOS
Data memory	RAW, JEPG
Port	USB 2.0 Hi-speed (Mini-B-jack)
Outlet connection	NTSC / PAL
Focal width (lens)	6.1–30.5 mm
Shutter (lens)	f/1.8(W)–f/2.9(T)
Exposure time (lens)	15–1/4000s

Technical data of filters:

Filter type	Filter colour	Usage
Green filter for blue light	yellow	SYBR®Green I, EvaGreen®, ROTI®GelStain, ROTI®Load DNAstain SYBR®Green, green fluorescence
Red filter for blue light	orange	ROTI®Gelstain Red, Ethidiumbromid, red fluorescence

Delivery incl. darkroom hood with integrated camera (12.1 MP), green filter for blue light, red filter for blue light.
Please order runVIEW electrophoresis system separately.

Darkroom Hood ROTIPHORESE® PROfessional runVIEW

The runVIEW darkroom hood is a portable, lightweight hood designed exclusively for use with the runVIEW system. It aids viewing the samples in bright lit areas during the run and has no further functions.

Directions for use

The hood is placed directly over the runVIEW unit, which includes an integrated power supply and a blue light illuminator. The illuminator provides the excitation source for the DNA and the special lid of the unit makes the gel bands visible.

Please note

For complete gel documentation please order the runDOC system (Art. No. 1315.1).

Gel Drying

Gel Drying Frames

For easy drying of gels between 2 cellophane papers without heat or vacuum. The cellophane sheets (spare packs) may also be used for drying of gels on vacuum gel dryers (60 °C). Cellophane sheets (cell glass) are uncoated.

The set contains

2 frames, 2 backs, 8 clamps and 50 cellophane sheets.

Technical specifications:

Art. No.	K420.1	K421.1
L x W, internal	117 x 117 mm	225 x 225 mm
L x W, external	140 x 140 mm	240 x 240 mm

Gel Drying Frames

Type	Art. No.	Pack Qty.	€
MAXI	**K421.1**	2 unit(s)	234,35
MINI	**K420.1**	2 unit(s)	154,45

Spare clamps

Clamps to fix the cellophane film to the gel drying frame.

Type	Art. No.	Pack Qty.	€
MAXI	**T827.1**	4 unit(s)	24,55
MINI	**T826.1**	4 unit(s)	21,75

Spare pack of cellophane

Material: Cellophan.

The cellophane sheets (spare packs) may also be used for drying of gels on vacuum gel dryers (60 °C). Cellophane sheets (cell glass) are uncoated.

Type	Art. No.	Pack Qty.	€
MAXI	**K423.1**	50 sheet	33,40
MINI	**K422.1**	50 sheet	31,90

Vacuum Gel Dryer

Features:

- Heatable
- For fast and even gel drying
- For drying protein and sequencing gels
- Particularly even distribution of temperature over entire drying surface
- Precise adjustment of temperature of up to 80 °C
- Digital display of temperature
- Timer for heating element and vacuum pump (1-minute increments)
- Very robust construction
- All accessories are also available individually

Please note

In order to achieve efficient drying, the vacuum pump should achieve a flow rate of 1000–6000 l/h (equals 1–6 m^3/h). We recommend use of the Membrane Vacuum Pump (Art. No. T789.1) and the ROTILABO® vacuum silicone tube (Art. No. 9746.1).

Technical specifications:

Blotting Units

Tank Blotting

Tank Blotting System ROTIPHORESE®

For the gentle transfer of proteins and nucleic acids

Features:

- Electro tank blotting system for blotting of up to 4 gels in parallel
- Optimised hinged cassettes - for most easy handling and rapid blot set up
- Module compatible with the vertical electrophoresis system ROTIPHORESE®PROclamp

The tank blotting system ROTIPHORESE®PROclamp is ideally suited for the gentle transfer of peptides and proteins of any size. It is ideal for large, temperature sensitive or native proteins.
The short distance between the electrodes ensures a constant high voltage over the entire transfer surface and reduces heat development. Open, reinforced cassettes guarantee optimal current flow and even blot contact. The colour coding of the cassettes and an asymmetrical lid ensure reliable blot build-up and correct power connection.

Buffer Recommendations for Transfer (Blotting)

Buffers recommended for Tank blotting:
Acc. to **Tobwin** et al., 1997: 25 mM Tris, 192 mM glycin, 20 % methanol. Optional: 0–0,1 % SDS.
Acc. to **Bjerrum und Schaefer-Nielsen**, 1986: 48 mM Tris, 39 mM glycin, 0–20 % methanol. Optional: 0–0.1 % SDS.
Acc. to **Dunn**, 1986: 10 mM $NaHCO_3$, 3 mM $NaCO_3$, 20 % methanol.

Buffers recommended for Semy Dry blotting:
Discontinuous buffer system: ROTI®Blot 1 – for standard proteins or ROTI®Blot 2 – for hydrophobic proteins.
Continuous **Tris-glycin buffer** acc. to Bjerrum and Schaefer-Nielsen, 1986: 48 mM Tris, 39 mM glycin, 0–20 % methanol. Optional: 0,01–0,1 % (usually 0,0375 %) SDS.
Continuous **CAPS buffer** for blotting of basic proteins and prior to N-terminal sequencing: 0,22 % CAPS (pH 10,5–11,0), 10 % methanol.
Do not adjust pH of the buffer (exception: CAPS stock solution). Adding acid or base to the buffer will result in higher conductivity, leading to increased formation of heat as well as ions. Subsequently, this results in brown, “burnt” looking blotting paper and damage to the electrode plates.

Methanol prevents the gel from swelling during transfer (mandatory for gradient gels!) and improves the absorption of proteins to NC membranes. For transfer of native or big proteins, reduce or omit methanol.

SDS improves transfer efficiency of large proteins and protein binding to PVDF membranes, however increasing relative current, power and temperature. Don’t use SDS for Semi-Dry blotting of small proteins to NC membranes. For tank blotting use 0,02 % SDS in minimum.

For **blotting of native proteins** use buffer acc to Bjerrum and Schaefer-Nielsen with 0,04 % SDS and 0–10 % methanol.

Tank Blotting System ROTIPHORESE® PROclamp MINI

ROTH SELECTION.

- Can be used with all gels of 10 × 10 cm in maximum
- Compatible with the PROTIPHORESE®ROclamp MINI unit for vertical electrophoresis (Art. No. 3501.1 – 3503.1)

Delivery incl. 1 ROTIPHORESE®PROclamp MINI buffer tank, safety lid with cables and 1 PROclamp MINI blotting module for max. 4 gels, incl. 4 cassettes and 16 fibre blotting mats, 1 cooling pad.

Semi-Dry-Blotting

Semi Dry Blotter

For transfer of proteins and nucleic acids.

Features:

- Durable, corrosion-free electrodes
- Fast, steady transfer
- Minimum heat development
- Low buffer use

The extremely constant electric field over the entire transfer surface guarantees optimal results with all transfer membranes.
As the electrodes are made of high-grade steel (cathode, lid) and platinised titanium (anode, base), they will last indefinitely if used correctly. There is no build-up of deposits on the transfer surface, the buffers cannot penetrate into the electrodes.

Semi Dry Blotter MAXI

ROTH SELECTION.

Type	Art. No.	Pack Qty.	€
Semi Dry Blotter MAXI	**T788.1**	1 unit(s)	1.811,40

► Please see our extensive assortment for Western-, Southern- and Northern-Blot detections in the chapter Biochemistry / Western & ELISA.

Transfer Recommendation

The power supply should be set to a defined current intensity resulting from the total transfer area. The voltage should be freely adjustable by the power supply.

We recommend for
Tank blotting: 2-4 mA / cm^2
Semi-Dry blotting: 2-5 mA / cm^2

Please also note the recommendations for the respective buffer system used.

Please note our **Technical Information Brochure** on the Internet next to the products:

Transfer Buffers
Tips and protocols

Semi dry blotter ROTIPHORESE® PROfessional

For transfer of proteins and nucleic acids.

Features:

- Fast transfer with uniform heat dispersion
- Superior blotting quality due to screw down lid and long life electrodes
- Minimum heat development and buffer use

Semi Dry Blotters PROfessional offer rapid transfer times for blotting of proteins, as well as nucleic acids, being compatible with gel thicknesses from 0,25 up to 10 mm.
Semi Dry Blotters PROfessional utilise a screw down lid, which secures the blot sandwich (optionally) and allows complete control of pressure ensuring even transfer. Uniform heat dispersion across the transfer surface ensures stable blotting parameters and no heat induced sample loss or transfer distortions.
The electrodes (platinum coated anode, base, and stainless steel cathode, lid) will exhibit no corrosion when used with accurately prepared transfer buffers, and provide many years of trouble free use.

Blotting Units

Blotting unit

For rapid transfer of DNA, RNA and immunological antibody screening methods.

General features:

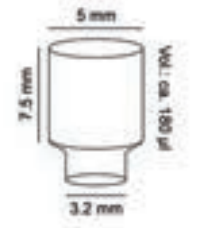
- Robust acrylic construction
- Precision lapped mating surfaces prevent sample leakage
- Steady transfer
- Very simple assembly
- Alpha-numeric sample identification

Directions for use

A vacuum of approximately 600 mm Hg (0,8 Bar, relative pressure) is required during sample application. We recommend LABOPORT® Membrane vacuum pump (Art. No. Y371.1) with hose stems for hose inner Ø 8 mm (Art. No. EL44.1) and the following hoses: ROTILABO® Vacuum silicone hose, inner Ø 8 mm (Art. No. 9746.1) or ROTILABO® Vacuum rubber hose, inner Ø 8 mm (Art. No. 0680.1).

Technical specifications:

Art. No.	T790.1	T791.1
Max. number of samples	96	48
Pockets	12×8	16×3
Volume per pocket	~180 µl	~360 µl



Delivery incl. template for cutting the filter membranes. Supplied without pump and hoses.

Semi-Dry-Blotting

UV Crosslinker

The UV crosslinker provides a compact unit occupying minimum bench space with a footprint of only 350 × 350 mm and a spacious interior chamber of 270 × 300 × 145 mm. As with all our products, safety is a major consideration so the door of the crosslinker is safety interlocked against opening during operation and the observation window in the door is ultraviolet blocking.

Features:

- Programmable microprocessor control
- UV energy monitored automatically
- Compact footprint with large interior
- Observation window – UV blocking
- Membrane keypad operation
- Clear LED display
- Safety interlocked

The ultraviolet energy is continuously monitored by an accurate microprocessor controlled photo feedback system which compensates for variation in output from the UV sources. In this way consistency of operation and maximum efficiency are maintained.

Possible applications:

- Fixing of nucleic acids to nylon or nitrocellulose membranes
- Southern or Northern blotting, dot blotting and colony or ple lifts
- Elimination or reduction of PCR contamination
- Nicking ethidium bromide stained DNA in agarose gels
- Gene mapping for creating cleavage inhibiting thymine dimers
- Screening RecA mutation
- Ultraviolet curing of polymers, adhesives and inks
- Ultraviolet sterilisation

Technical specifications:

Transfer Filter Membranes

Transfer Membranes Made of Nitrocellulose

Pure nitrocellulose membranes for reliable protein standard applications

Please note: Membranes made of nitrocellulose age and should be replaced anually!

- Free of cellulose acetate
- High absorption capacity
- Very low background
- 0,2 µm or 0,45 µm pore size
- Easy to block
- For all standard detection systems

Transfer membrane ROTI®NC 0.2

Transfer membrane for protein analyses, colony- and plaque-lifts.
High-quality transfer membrane for all detection systems – extremely suitable for all protein transfer and detection methods. The membrane stands out for its particularly high mechanical stability. The pure 100 % nitrocellulose quality membrane is easy to block and allows for background-free blots with perfect bands.

Directions for use

The pore size of 0,2 µm is suitable for proteins and peptides of all sizes. The best retention rate is achieved when blotting proteins of up to 70 kDa. Its excellent protein binding capacity not only efficiently prevents the blot from going through during transfer, but also guarantees highly sensitive detection of even low protein amounts.
A slight optical difference between the two membrane sides results from the membrane production and has no influence on the binding capacity or the blot quality of the two sides. Both sides can be used equally for transfer and detection.We recommend to always use the optically same side as "detection side" to achieve maximum reproducibility.

Application examples

Optimised for proteins of ≤70 kDa. Western- and far-western-blot, colony- and plaque-lifting of nucleic acids and proteins, immunoblots, dot-blots.
Detection via radio activity, chemoluminescence colour.

Transfer membrane ROTI®NC 0.45 0,45 µm

Transfer membrane for protein analyses, Southern- and Northern-Blots.

High-quality transfer membrane for all detection systems – extremely suitable for all protein transfer and detection methods. The ROTI®NC 0.45 membrane offers very good mechanical stability, standing out for its particularly smooth structure and even membrane thickness. The pure 100% nitrocellulose quality membrane is easy to block and allows for background-free blots with perfect bands.

Directions for use

The pore size of 0,45 µm is suitable for proteins and peptides of all sizes. The best retention rate is achieved when blotting proteins of ≥20 kDa. Having a high protein binding capacity, the membrane not only efficiently prevents protein loss during transfer, but also guarantees very sensitive detection of even low protein amounts.
A slight optical difference between the two membrane sides results from the membrane production and has no influence on the binding capacity or the blot quality of the two sides. Both sides can be used equally for transfer and detection.We recommend to always use the optically same side as “detection side” to achieve maximum reproducibility.

Application examples

Optimised for proteins ≥20 kDa. Western- and far-Western-blots, Southern- and Northern blots, colony- and plaque-lifting of nucleic acids and proteins, dot- and slot blots.
Detection via radio activity, chemoluminescence, colour.

Transfer membrane Amersham™ Protran® NC 0.2

Transfer membrane for most nucleic acid and protein immobilising techniques
Replaces Protran® BA 83 from Whatman®
Multiple use – ideal for most nucleic acid and protein immobilising techniques. Pure nitro-cellulose, free from cellulose acetate and triton. They have a high binding capacity and low background.

Directions for use

Nitrocellulose should only conditionally be used for electrophoretic transfer of nucleic acids, because of the high salt concentrations required for the transfer.
The pore size of 0,2 µm is suitable for proteins and peptides of all sizes.

Application examples

Southern, Northern, Western transfer, colony and plaque hybridisation, immunoblots, nucleic acid and protein dot-blot, slot-blot, electrophoretic transfer of proteins.
Detection systems are radioactivity, chemoluminescence, colour

Technical specifications:

Art. No.	4685.1

Transfer membrane Amersham™ Protran® NC 0.45

Transfer membrane for most nucleic acid and protein immobilising techniques
Replaces Protran® BA 85 from Whatman®
Multiple use – ideal for most nucleic acid and protein immobilising techniques. Pure nitro-cellulose, free from cellulose acetate and triton. They have a high binding capacity and low background.

Directions for use

Nitrocellulose should only conditionally be used for electrophoretic transfer of nucleic acids, because of the high salt concentrations required for the transfer.
Membranes of 0,45 µm pore size allow for DNA transfer (minimum 300 bp) and protein transfer (minimum 20 kDa).

Application examples

Southern, Northern, Western transfer, colony and plaque hybridisation, immunoblots, nucleic acid and protein dot-blot, slot-blot, electrophoretic transfer of proteins.
Detection systems are radioactivity, chemoluminescence, colour

Transfer Membranes Made of PVDF

For optimal results with all protein transfer techniques

- Well suited for all protein blots
- Best signal-to-noise ratio
- Very robust
- 0,2 µm or 0,45 µm pore size
- Suitable for long-term exposition
- Suitable for all detection systems
- May be used for peptide sequencing

Transfer membrane ROTI®PVDF 0.2

PVDF membrane for protein analyses.
ROTI®PVDF 0.2 is a hydrophobic, microporous polyvinylidene membrane, free from adjuvants and detergents. It has been optimised for transfer and highly sensitive detection of proteins of up to 70 kDa, but is also perfectly suited for blotting of bigger proteins.

Directions for use

The membrane shows superior protein binding parameters and stands out for its particularly low background. It may also be used very well after repeated stripping and harsh washing processes.
This mechanically rigid transfer membrane can be easily cut to the desired gel size and it remains flexible and tear-proof even when dry.
Briefly immerse ROTI®PVDF 0.2 membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every blotting system.
Due to production processes, the membrane shows two different sides – one smooth and one raw. For optimally distinct bands, please use the smooth side for protein binding.

Application examples

Optimised for proteins of ≤70 kDa. Western-blot, Dot-blot, lipopoly-saccharide- and amino acid analysis, bindings assays, *N*-terminal peptide sequencing.
Detection systems: chemoluminescence, radioactivity, colour

Technical specifications:

Art. No.	**8989.1**
Dimensions	300 × 30 cm
Version	roll
Pore size	0,2 µm

Transfer membrane ROTI®FluoroPVDF

Premium PVDF membrane from Carl ROTH, suitable for direct fluorescence detection
ROTI®Fluoro PVDF is a white, microporous membrane made from naturally hydrophobic polyvinylidene fluoride. The membrane is of superior protein binding capacity, making it perfectly suited for all standard and special applications in the field of protein analysis.

Directions for use

ROTI®Fluoro PVDF has been specially optimised for direct detection via fluorescence.
ROTI®Fluoro PVDF binds proteins adhesively via hydrophobic interactions. It enables very sensitive protein detection by keeping the background very low, resulting in a good signal-to-noise ratio with all standard detection systems. The mechanically rigid membrane is of high tensile strength and tear-proof, and does not crack or curl during handling. Therefore, signals remain clear and distinct, and are undisturbed by false-positive signals caused by membranes crinkles.
Briefly immerse ROTI®Fluoro PVDF membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every aqueous transfer system.
The membrane ROTI®Fluoro PVDF is only conditionally suitable for use with chemiluminescence detection. The membranes are specially coated for fluorescence applications and this coating can reduce the sensitivity of chemiluminescence. For chemiluminescent assays we recommend the use of ROTI®PVDF membranes.

Application examples

Western- and Far-Western-Blot, analysis of small peptides, Immunoblot, Dot-blot, binding assays, *N*-terminal sequencing
Detection systems: fluorescence, radioactivity, colour

Transfer membrane ROTI®PVDF 0.45

PVDF membrane from Carl ROTH.
ROTI®PVDF is a hydrophobic, microporous polyvinylidene membrane. It is free from adjuvants and detergents. This membrane enables efficient transfer of proteins over a wide molecular weight range.

Directions for use

This mechanically rigid transfer membrane can be easily cut to the desired gel size and it remains flexible and tear-proof even when dry. Briefly immerse ROTI®PVDF membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every aqueous blot system.

Application examples

Optimised for proteins ≥20 kDa. Western-blot, Dot-blot, lipopolysaccharide- and amino acid analysis, binding assays, N-terminal peptide sequencing.
Detection systems: chemoluminescence, radioactivity, colour.
Not suitable for use with infrared densitometers (700 nm/800 nm).

Transfer membrane Immobilon®-P PVDF

Original PVDF membrane from Millipore, for outstanding Western Blots.
The Immobilon-P membrane consists of microporous polyvinylidene fluoride (PVDF) with a high binding capacity for all biomolecules, particularly for proteins, independently of the transfer method or gel used. The efficient signal-to-noise ratio allows long exposure times and provides a high sensitivity during detection even when working with low protein amounts.

Directions for use

Compared to nitrocellulose the Immobilon-P membrane is much easier to handle and much better to stain, and shows superior resistance to organic solvents. Furthermore, the open pore structure provides easy access of antibodies or other peptides used for detection to bound protein, and enables efficient removal of unbound molecules, efficiently reducing the background.
Immobilon-PVDF membrane is ideal when performing immunodetection. The rapid immunodetection method additionally provides a tool to reduce the time span needed for the process by several hours. During Western Blot, the superior qualities of the PVDF membrane not only supersede a blocking step, but also reduce number and time span of washing steps considerably without compromising on specificity or sensitivity.

Application examples

Western-blot, Dot- and Slot-blot, amino acid analysis, binding assays, detection of glycoproteins, N-terminal peptide sequencing.
Detection systems: radioactivity, chemoluminescence, colour

Transfer Membranes Made of Nylon

For perfect Southern- and Northern-Blots

- Very low background
- Suitable for all staining techniques
- Superior performance in nucleic acid absorption
- Available as roll, easy-to-use pre-cut membranes and disks – the perfect size for each application

Transfer membrane ROTI®Nylon plus

Ideal for DNA/RNA-transfers.
ROTI®Nylon plus is a cationic, einforced nylon 6.6-membrane with extremely high tensile strength. The positively charged membrane surface guarantees rapid and efficient binding of DNA and RNA. May be steam sterilised.
Also available in convenient pre-cut sheets of standard gel size!

Directions for use

Nucleic acids can be cross-linked to the membrane by baking (80 °C, 15 min) or through UV exposure. No cross-linking is required for alkaline transfer as the negatively charged DNA forms a very stable complex with the positively charged ROTI®Nylon membrane.

Application examples

Southern- and Northern-blot, Dot-blot, DNA fingerprinting, macro- and microarrays.
Detection systems: radioactivity, chemoluminescence, fluorescence“

Technical specifications:

Art. No.	HP34.1	HP35.1	HP36.1	K058.1

Transfer membrane ROTI®Nylon 0.2

Ideal for DNA/RNA transfer, particularly for colony- and plaque-lifting, as well as for all multiple rehybridisations.
Especially recommended for Northern-blots.
ROTI®Nylon 0.2 is a neutral, enhanced Nylon membrane. Based on the material it provides a superior tensile strength and is extremely resistant against alcohol, acetone, and many other organic solvents.

Directions for use

In a buffer pH of 6,5 ROTI®Nylon 0.2 is uncharged and by means of the surface-standing amino- and carboxy-groups has superior hydrophilic qualities. The charge of the membrane (ζ-potential) may be altered through the pH of the buffer – the membrane is positively charged at pH <6,5 and negatively charged at pH >6,5.
Membrane of particulary high DNA-binding capacity. Available as roll (pore size 0,2 µm) for high-flexible usage, and as disks (pore size 0,45 µm) for colony- and plaque-lifting. May be steam sterilised.
Covalent bondage of transferred nucleic acids is achieved by cross linking (baking for 15 min at 80 °C or UV-cross linking for 20 sec at 260 nm). Due to the excellent signal-to-noise ratio of the membrane, very sensitive detection (single copy-gene detection) and multiple rehybridisation is possible without loosing sensitivity.

Application examples

Southern- and Northern blot, Dot blot, DNA fingerprinting, ELISA, colony- and plaque lifting, macro- and microarrays.
Detection systems: radioactivity, chemoluminescence, fluorescence

ROTI®Fair TG-Western

TG buffer powder (pouch), Tris-glycine buffer

Exactly pre-weighed pouches for convenient and rapid preparation of TG-Western solution.

SDS-free running buffer for native protein gel electrophoresis. Optimum base for preparation of Western blot transfer buffer by addition of 5–20 % methanol (Blotting-Grade, Art. No. 0082).

Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at room temperature.

ROTI®Fair TG-Western

for 1000 ml/pouch, for electrophoresis

Buffer for protein electrophoresis and transfer.

1x TG-Western solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

WGK 1

Prepared 1x TG-Western solution contains: 25 mM Tris, 0.192 M glycine, pH-value 8.3 ±0.05, when prepared in deionized or distilled water.

Art. No.	Pack Qty.	Pack.	€
1269.1	10 unit(s)	box	231,15

ROTI®Fair TG-Western

for 5000 ml/pouch, for electrophoresis

Buffer for protein electrophoresis and transfer.

1x TG-Western solution is prepared by dissolution of 1 pouch in 5000 ml highly pure water.

WGK 1

Prepared 1x TG-Western solution contains: 25 mM Tris, 0.192 M glycine, pH-value 8.3 ±0.05, when prepared in deionized or distilled water.

Ponceau S (C.I. 27195)

for histology and electrophoresis

For reversible protein staining on membranes and for microscopy.

Directions for use

Staining of NC membranes: 0.2-2 % Ponceau S in 3 % trichloroacetic acid (Art. No. 8789.1) + 3 % sulphosalicylic acid (Art. No. 4119.1), incubate for 1-5 mins. at room temperature. Enhance contrast by incubation in water acidified by a few drops acetic acid.

Staining of PVDF membranes: 0.1–1 % Ponceau S in 10 % acetic acid (Art. No. 6755.1), incubate 1-5 mins. at room temperature. Ponceau S stained bands on PVDF only appear bright and distinct after drying (not recommended if Western blotting shall be performed).

Prior to Western blot analysis decolourise in PBS (Art. No. 1058.1) or TBS (Art. No. 1060) for 10-20 mins. at room temperature.

Suitable for NC and PVDF membranes as well as prior to Western analyses.

ROTI®Blot

Blotting buffers

Discontinuous buffer system for optimum transfer in the semi-dry blotter.

- Optimised for semi dry blotting
- Superior blotting results for peptides and proteins of every size
- Special formulation with reduced acid formation – for optimal electrode protection

In the semi-dry blotting system, both a continuous buffer system (identical buffer at anode and cathode) and a discontinuous buffer system (different buffer at anode and cathode) can be used. The transfer performance of discontinuous systems is, however, generally higher, since the two buffers are designed separately according to the needs of the two electrodes.
The discontinuous buffer system ROTI®Blot 1 consists of two different buffers, the anode buffer A (pH 7.8 ±0.1) and the cathode buffer K (pH 8.5 ±0.1). ROTI®Blot 1 shows a much better transfer efficiency than a tris-glycine buffer and can be used for proteins and peptides of any length.

Directions for use

The blot stack is built up by soaking the upper blotting papers with cathode buffer and the lower blotting papers with anode buffer. With slightly longer transfer times, proteins >100 kDa can also be completely transferred with ROTI®Blot 1.
A detailed instruction manual is enclosed with the product.

ready-to-use

ROTI®Blot 1

10x conc., for electrophoresis

Discontinuous transfer buffer for semi dry blotting.

The kit contains

Anode buffer ROTI®Blot A, 1 l (10 x concentration) (Art. No. L510)
Cathode buffer ROTI®Blot K, 1 l (10 x concentration) (Art. No. L511)
Both solutions may be bought separately.

Kit of two solutions. Both solutions may be bought separately.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

DNA/RNA Isolation

ROTI®Phenol

ROTI®Phenol solutions for DNA and RNA extraction

- Reduce exposure to toxic chemicals
- Prepared from phenol of highest purity
- Packed under argon for maximum stability
- Successfully tried and tested in many research laboratories

ready-to-use

ROTI®Phenol

ready-to-use, for the extraction of nucleic acids

Redistilled, in TE buffer equilibrated phenol, pH 7,5-8,0.

Phenol solutions · ROTI®Aqua-Phenol

Phenol solutions for nucleic acid isolation must be buffered and adjusted to the correct pH value prior to use. ROTI®Phenol is a redistilled, in TE buffer equilibrated readytouse phenol.

ROTI®Phenol has been successfully tried and tested for isolating nucleic acids in many research laboratories. This quality product for molecular biology replaces the time consuming preparation of phenol and subsequently any exposure to toxic vapours.

Mechanism

Addition of 1 volume ROTI®Phenol and thorough mixing. Phenol leads to denaturation of proteins which accumulate in the interphase. Following centrifugation, the nucleic acid containing solution may be retrieved as upper phase.

Draw solution from lower phase. Do not shake before use!
Covered with buffer. Store in the dark!

Storage temperature: +4 °C

UN no. 2821 · ADR 6.1 III · WGK 2

Danger H301+H311+H331-H314-H341-H373-H411

Bottled under argon.

Art. No.	Pack Qty.	Pack.	€
0038.1	100 ml	glass	32,15
0038.2	250 ml	glass	64,40
0038.3	500 ml	glass	99,90

Mechanism

Phenol and chloroform lead to denaturation of proteins which accumulate in the interphase. Isoamyl alcohol prevents foaming and very efficiently inhibits RNAses.
For distinct phase separation, ROTI®Aqua-Phenol needs a pH of ≤4.0 in the aqueous upper phase. If needed, the upper phase may be acidified by adding 1-2 drops of 1 N HCl.

Draw solution from lower phase. Do not shake before use!

ready-to-use

ROTI®Phenol/Chloroform/Isoamyl alcohol

ready-to-use, for the extraction of nucleic acids

Redistilled, in TE-buffer equilibrated phenol, chloroform and isoamyl alcohol at a ratio of 25:24:1, pH 7,5-8,0.

Phenol solutions · ROTI®Aqua-P/C/I

ROTI®Phenol/Chloroform/Isoamyl alcohol is re-distilled phenol, equilibrated in TE buffer, premixed with high purity chloroform and isoamyl alcohol.

ROTI®Phenol/Chloroform/Isoamyl alcohol has proven itself in many research laboratories for the isolation of nucleic acids and is an ideal complement to pure ROTI®Phenol.

Mechanism

Addition of 1 volume ROTI®Phenol/Chloroform/Isoamyl alcohol and thorough mixing. Phenol and chloroform lead to denaturation of proteins which accumulate in the interphase. Isoamyl alcohol prevents foaming and very efficiently inhibits RNAses. Following centrifugation, the nucleic acid containing solution may be retrieved as upper phase.

Draw solution from lower phase. Do not shake before use!
Covered with buffer. Store in the dark!

Danger H301+H331-H312-H314-H341-H351-H361d-H372-H411

Bottled under argon.

Art. No.	Pack Qty.	Pack.	€
A156.3	100 ml	glass	46,15
A156.1	250 ml	glass	91,95
A156.2	500 ml	glass	155,90

ready-to-use

ROTI®Aqua-Phenol

ready-to-use, for RNA extraction

Redistilled, in water saturated phenol, pH 4,5-5.

Phenol solutions

ROTI®Aqua Phenol is perfectly suited for RNA isolation and other procedures, requiring a low phenol pH value. The low pH results in interphase enrichment of the DNA, reducing DNA contamination in the RNA eluate.

Also ideal for self-adjustment of the pH-value. If required, buffer solution (e.g. TE buffer) may be added directly into the bottle, as ROTI®Aqua-Phenol comes in the following bottle sizes:
A980.2: 100 ml in a 250 ml bottle
A980.1: 250 ml in a 500 ml bottle
A980.3: 500 ml in a 1 l bottle

Mechanism

Addition of 1 volume ROTI®Aqua-Phenol and thorough mixing. Phenol leads to denaturation of proteins which accumulate in the interphase. The acid pH-value causes a depletion of the DNA, so that only little contaminating DNA is isolated. Following centrifugation, the RNA containing solution may be retrieved as upper phase.
For distinct phase separation, ROTI®Aqua-Phenol needs a pH of ≤4.0 in the aqueous upper phase. If needed, the upper phase may be acidified by adding 12 drops of 1 N HCl.

Draw solution from lower phase. Do not shake before use!
Covered with water. Store in the dark!

Storage temperature: +4 °C

Please note our **Technical Information Brochure** on the Internet next to the products:

Phenolic DNA Isolation
Background and protocol

ready-to-use

ROTI®Aqua-P/C/I

ready-to-use, for RNA extraction

Redistilled, in water saturated phenol, chloroform and isoamyl alcohol at a ratio of 25:24:1, pH 4,5-5.

Phenol solutions

ROTI®Aqua-P/C/I is the optimal choice for RNA isolation and other procedures where a low phenol pH value is desired.
The low pH results in interphase enrichment of the DNA, reducing DNA contamination in the RNA eluate.

Mechanism

Addition of 1 volume ROTI®Aqua-P/C/I and thorough mixing. Phenol and chloroform lead to denaturation of proteins which accumulate in the interphase. Isoamyl alcohol prevents foaming and very efficiently inhibits RNAses. The acid pH-value causes a depletion of the DNA, so that only little contaminating DNA is isolated. Following centrifugation, the RNA containing solution may be retrieved as upper phase.
For distinct phase separation, ROTI®Aqua-P/C/I needs a pH of ≤4.0 in the aqueous upper phase. If needed, the upper phase may be acidified by adding 12 drops of 1 N HCl.

Store in the dark!

Storage temperature: +4 °C

X985.2	500 ml	glass	96,25

ready-to-use

ROTI®C/I

ready-to-use, for the extraction of nucleic acids

Chloroform/Isoamyl alcohol at a ratio of 24:1.

Mixture of chloroform and isoamyl alcohol of highest purity.
Ideal for extraction of DNA/RNA in combination with ROTI®Phenol, especially for the purification of nucleic acid containing solutions from residual phenol.

Mechanism

Addition of 1 volume ROTI®C/I and thorough mixing. Chloroform dissolves residual phenol from the sample solution and leads to the denaturation of residual proteins which accumulate in the interphase. Isoamyl alcohol prevents foaming and very efficiently inhibits RNAses. Following centrifugation, the purified nucleic acid containing solution may be retrieved as upper phase.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

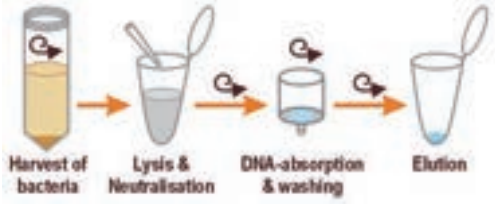
Extraction Systems & Kits

ROTI®Prep Plasmid MINI-XL

for molecular biology



Kit for easy isolation of plasmids from up to 15 ml bacterial culture.

MIDI preps in MINI size-fomat.

ROTI®Prep Plasmid MINI-XL is a further development of the classical Plasmid Mini extraction kit, which is based on an alkaline lysis and binding of the plasmid to the spin filter.
The binding capacity of the spin filter has been, compared to usual plasmid mini kits, considerably increased (approx. 80 µg plasmid DNA) and allows now a plasmid extraction from 5–15 ml bacteria culture. Since filter dimensions correspond to the usual miniprep spin filters, its application differs only slightly from other plasmid mini kits. Most significant difference is the afore done convenient lysis in a 15 ml tube.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation from 5–15 ml bacteria culture
- Preparation within approx. 20 minutes
- Yield 60–70 µg (on average)

The elution resulting in highly concentrated pure DNA in 100 µl, takes then place in a 1,5 ml tube, like in standard mini kits. Isolated DNA is free of RNA or protein contamination and can be directly applied to all standard down-stream applications like restriction digest, sequencing, *in vitro* transcription, transfection etc.

The kit contains

Resuspension Buffer RB, Lysis Buffer LS, Neutralisation Buffer NB, Washing Buffer PA, Washing Solution PB, Elution Buffer XEB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this kit may not be bought separately.

Please order ethanol 96–99,8 % (p.a., Art. No. 9065) separately.

Preparation of up to 70 µg plasmid DNA from up to 15 ml bacterial culture per column.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

UN no. 3316 · ADR 9 II · WGK 1

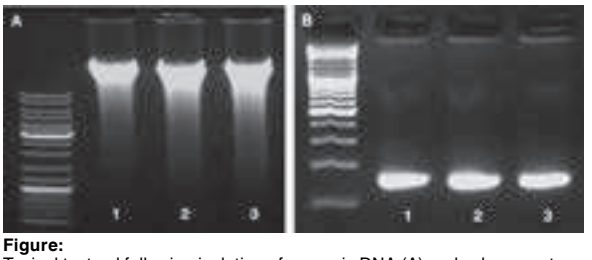
ROTI®Prep Genomic DNA MINI

for molecular biology

Kit for isolation of genomic DNA from tissues, rodent tails, FFPE tissues, buccal swabs, cell cultures.

Roti®Prep Genomic DNA MINI has been developed for the isolation of genomic DNA from various sources.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation in approx. 15 minutes (excluding lysis)
- Yield up to 65 µg gDNA, depending on source material



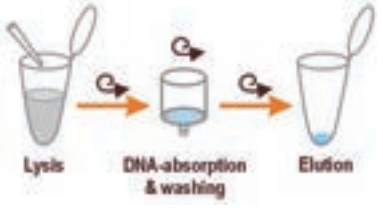


Figure:
Typical test gel following isolation of genomic DNA (A) and subsequent GAPDH-PCR (B) from rodent tail (frozen, 8 mm each).
Yield of gDNA (from left to right): 22,6 µg, 27,7 µg and 28 µg. Ratio A_{260}:A_{280} = 1,97±0,01.

In addition to the especially on proteinase K adapted lysis buffer, the filtration spin column has been optimised, permitting particularly high extraction rates. Extraction from up to 40 mg tissue, therefore, allows a yield of up to µg µg DNA. The thereby extracted DNA is free of RNA and proteins, and can directly be stored or used for downstream applications.

Possible basic material:

- Tissue (up to 40 mg)
- Rodent tails (0,5–1 cm)
- FFPE tissue (formalin-fixed, paraffin-embedded)
- Buccal swabs
- Cell culture (up to 5x10^6 cells)

The kit contains

Lysis Buffer LSA, Binding Buffer BSN, Proteinase K, Washing Buffer WST, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use.
Contents of this kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065), RNase A (Art. No. 7156, not for FFPE tissue), and for FFPE tissue xylole (Art. No. 4436) or octane separately.

Preparation of up to 65 µg gDNA from up to 40 mg tissue per column.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTI®Prep Blood Genomic DNA MINI

for molecular biology

Kit for isolation of DNA from whole blood

Roti®Prep Blood Genomic DNA MINI has been specially designed for the isolation of high purity genomic DNA from blood samples.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation in approx. 25 minutes
- Yield up to 30 µg gDNA

The Roti®Prep Blood Genomic DNA MINI kit has been adapted to gain high purity DNA from fresh or frozen blood (EDTA or citrate stabilised) or whole blood, respectively. In order to get optimal results, two protocols, depending on sample amount, are provided. Furthermore, the properties of the binding buffer have been optimised to reach highest binding capacity with blood samples, permitting a yield of up to 30 µg gDNA out of 400 µl blood.
Usage is uncomplicated and fast to achieve (approx. 25 minutes, lysis included), and offers best conditions for following downstream applications.
Isolated gDNA is free of EDTA, RNA, or proteins, and may directly be applied to all standard downstream applications like, for instance, restriction digest, PCR etc.

The kit contains

Lysis Buffer LSN, Binding Buffer BR, Proteinase K, Washing Solution WSO, Washing Buffer WSH, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use.
Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065) and RNase A (optional, Art. No. 7156) separately.

Preparation of up to 30 µg gDNA from up to 400 µl blood per column.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTI®Prep RNA MINI

for molecular biology

Kit for RNA isolation from eukaryotic cells, tissues, bacteria, biopsies.

Roti®Prep RNA MINI has been developed for the isolation of total RNA from various sources.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Use of DNase not necessary
- Preparation in approx. 15 to 40 minutes
- Yields up to 100 µg RNA, depending on source material
- Elution in 30-80 µl

One of the critical points in RNA extraction is the presence of endogenous RNases, which can lead to high losses very early in extraction of the (in comparison to DNA) very sensitive RNA. Therefores the lysis buffer has been specially optimised to inactivate RNases, with highest efficiency, already at the early stage of the extraction.
Furthermore, in order to get a high-pure total RNA, one particularly for this purpose developed prefilter is used. This filter exclusively serves for binding and targeted removal of DNA impurities, and is discarded after use with the bound DNA. Thus, it is possible to omit application of DNase I.
Total RNA is then obtained from the DNA-free eluate through a simple "Binding-Washing-Elution" process.
In each preparation, up to 100 µg highly pure total RNA may be isolated.
One preparation takes (excluding lysis) approx. 10 mins.
Isolated RNA is free of DNA and enzyme inhibitors, and may directly be applied to RT-PCR or other downstream applications.

Possible basic material:

- Tissues (up to 20 mg)
- Eukaryotic cells (up to $5x10^6$)
- Bacteria Gram + and Gram - (up to $1x10^9$)
- Biopsies

The kit contains

Lysis Buffer LSR, Washing Buffer WSA, Washing Solution WSL, RNase-free Water, spin filters (blue), spin columns (violet), collection tubes, elution tubes, detailed instructions-for-use.
Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065) and 70 % (p.a., Art. No. T868) separately.

Preparation of up to 100 µg whole RNA from up to 20 mg tissue or cells per column.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

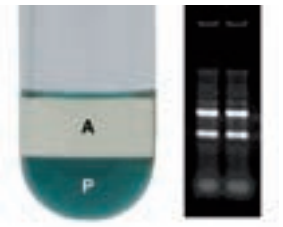
ROTI®ZOL RNA



ready-to-use, for molecular biology

Ready-made solution with green dye for isolation of total RNA

ROTI®ZOL RNA is a ready-to-use, green-coloured solution for isolating total RNA from biological samples such as cells or tissue.

ROTI®ZOL RNA is based on the phenolic isolation procedure known from Chomczynski and Sacchi (*Anal. Biochem.* (1987) 162:156-9). Due to the advanced and optimized formulation, ROTI®ZOL RNA results in very high recovery rates of highly pure total RNA. Application is very convenient and preparation of several samples in parallel is finished in less than one hour. Additionally, the green colour significantly simplifies the separation of the RNA containing aqueous phase, the DNA containig interphase, and the protein containing phenolic phase during the process.

- Easy and very rapid two-step RNA isolation
- High recovery rates of intact, very pure total RNA
- Applicable on a broad range of tissues and on cell types
- The purified RNA is ready for use in standard downstream applications such as RT-PCR

Figures 1 and 2:
Isolation of totalRNA by ROTI®Zol RNA.
Left: Tube after centrifugation. A: Aqueous phase - RNA containig, P: Phenolic phase - protein containing. DNA accumulates in the A/P interphase.
Right: Typical gel of total RNA isolated by ROTI®Zol RNA (extracted from $5x10^6$ HL-60 cells).

Typical RNA yield from $5x10^6$ cells: 30–35 µg
Typical purity of RNA prepared from $5x10^6$ cells: 2,08 (A_{260}/A_{280})

1 ml ROTI®ZOL RNA is used for RNA isolation from 100 mg tissue or 10^7 cells, respectively.

Storage temperature: +4 °C

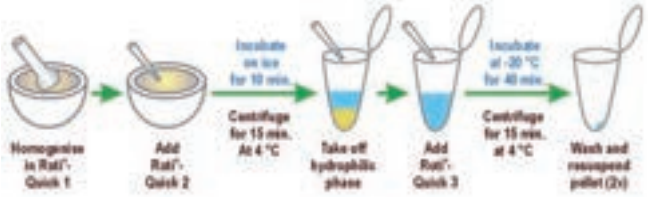
ready-to-use

ROTI®Quick kit



ready-to-use, for molecular biology

Kit for RNA-isolation from cells and tissues.

Column-free, ultra-flexible isolation system designed for reliable isolation of total RNA from almost any tissue.
The ROTI®Quick Kit is suitable for use with cell culture material, biopsies, high-fat or high-protein tissue, blood (Üçeyler *et al. Neurology* (2007) 69:42-9), solid plant material, mitochondria (Backert *et al. Plant Molecular Biology* (1997) 33:1037-50), mycoplasms (Weiner *et al. Nucleic Acids Res.* (2000) 28:4488-96) and many more. The kit can be used for both fresh tissue and frozen material.

The ROTI®Quick Kit is based on the GITC isolation method by Chomczynski and Sacchi (Chomczynski and Sacchi. (1987) *Anal. Biochem.* 162:156) and includes three optimised ready-to-use solutions that were developed by molecular biologists and have proven effective for many years.
After the tissue has been homogenised, the RNA is purified in a single step and isolated by precipitation. Each isolation takes approximately 2,5 hours, and multiple isolations can easily be performed simultaneously. The incubation and centrifuging steps take about 2 hours.

- Easy, most versatile application
- High recovery rate of intact, very pure total RNA
- Column-free two-step isolation
- Applicable on nearly any tissue type

Preparation as given in the instruction-for-use is optimised for RNA isolation from approx. 0,2 g of tissue or cell material. The amount of material isolated per batch may easily be up- or downscaled to larger or smaller amounts of tissue.
The isolated total RNA is highly pure and may be used directly for all common down-stream applications, such as RT-PCR, Northern blotting and reverse transcription. Detailed instructions-for-use are enclosed with each kit.

The kit contains

ROTI®Quick Kit 1 (Art. No. A976), ROTI®Quick Kit 2 (Art. No. A977), and ROTI®Quick Kit 3 (Art. No. A978).
Contents of this Kit may not be bought separately.

The Rot®-Quick Kit is sufficient for 20 isolations from 0,2 g tissue each.

Storage temperature: +4 °C

ROTI®Prep PCR Purification

for molecular biology

Kit for concentration and purification of PCR products.

Very fast purification and/or concentration of PCR products, between 60 bp and 30 kb length, through simple but effective spin column technique.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Purification in approx. 3 minutes
- For fragment length of 60 bp-30 kb
- Recovery rate up to 95 %
- Elution in 10 µl

The high performance membrane used for the Roti®Prep PCR Purification columns, allows purification or concentration of PCR products within approx. 3 minutes. The PCR product to be extracted (50 µl in maximum) is first mixed with binding buffer, which can be done separately or directly in the spin filter column. The nucleic acid is then eluted by centrifugation, without any additional washing step, in a minimum of 10 µl of water or buffer.
Isolated DNA is free of residual nucleotides or PCR additives, and may directly be applied to all standard downstream applications like cloning or sequencing.

The kit contains

Binding Buffer, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use.
Contents of this Kit may not be bought separately.

Yield up to 95 %, elution in minimum 10 µl.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTI®Prep Gel Extraction

for molecular biology

Kit for DNA extraction from agarose gels.

DNA extraction from agarose gels through incubation and subsequent spin column process.
The gel slice to be extracted (up to 300 mg) is first solubilised in a lysis buffer through a simple 10 minute incubation. After that, DNA is elutied via convenient spin filter centrifugation in approx. 10 mins.
A specially developed Binding Enhancer is admixed in order to enhance binding efficiency of the DNA to the filter, and thus yield and purity of the isolated DNA.

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Extraction within approx. 20 minutes
- For fragment length of 100 bp–30 kb
- Recovery rate up to 90 %

Furthermore, the ROTI®Prep Gel Extraction kit allows, if needed, to reduce elution volume down to 10 µl in order to obtain particularly highly concentrated DNA.
For gel runs both, TAE and TBE may be used. The kit is compatible with all standard gel loading buffers and gel staining reagents, even non-toxic ethidium bromide replacements like, for instance, Roti®GelStain.
Isolated DNA is free of residual agarose, PCR- and ligase inhibitors, and cytotoxic reagents, and can directly be applied to all standard downstream applications like cloning, PCR, transformation and transfection.

The kit contains

Binding Enhancer, Gel Solubizer, Washing Solution WSL, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use.
Contents of this Kit may not be bought separately.

Please order ethanol 96-99,8 % (p.a., Art. No. 9065) separately.

Yield up to 90 %, elution in minimum 10 µl.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Instructions for use

can be found on the Internet next to the product description.

Gel extraction kit Ultrafree® DA

for molecular biology

For easy and speedy extraction of DNA fragments from agarose or polyacryl amide gels.

- Extraction in 10 minutes
- High recovery of fully intact DNA
- Highly efficient with all gel running buffers
- Easy application – even during student courses
- Convenient handling even of large sample numbers

Recovery of functionally intact DNA in one spin-step. The agarose slice is placed directly into the pre-assembled device and centrifuged for 10 minutes (fig. B). Melting or enzymatic digestion is not required. The agarose slice is nebulised and the DNA is filtered and purified during centrifugation. The eluate may simply be stored away in the extraction tube or collected from the tube in order to apply the DNA to subsequent analyses.

Directions for use

Compatible with all agaroses with standard gelling temperature (not compatible with Low-Melting agarose). Suitable for fragments of 100 bp up to 10,000 bp. Ideal also for labelled DNA, e.g. after fluorescence- or radioactive labelling. Reliable recovery rates for fragments of 100 bp up to 2,000 bp.
The gel extraction units may be used with all standard gel running buffers. Following elution from gels run with ROTIPHORESE® 10x TAE buffer *light* (Art. No. 0122.1), the DNA may be applied **directly** to cloning or sequencing.
Compatible with all standard Mini-centrifuges.

ROTI®elution Tubes

RNase-free, DNase-free and proteinase-free, free of PCR products. For gel elution and purification of DNA/RNA and proteins.
Easy-to-handle system for gel elution and purification of DNA/RNA and proteins in solution (electro elution).
This very gentle method guarantees the non-disruptive purification of high-molecular or genomic DNA as well as of native protein complexes and long peptides. Using membranes of low MWCO, elution of very small DNA fragments is possible, making the tubes a very useful tool for the efficient desalting of primers within 60–100 min as well as for purification of siRNA (ss or duplexes).
ROTI®elution tubes are suitable for elution of ssDNA (≥20 nt), dsDNA (15 bp–100 kb), RNA of each size, proteins of each size, and of protein/nucleic acid complexes. The tubes may be applied to elution procedures from agarose- and polyacrylamide gels, as well as to all popular electrophoresis units. Used in floating racks, they are ideal for the purification of DNA, RNA or proteins by means of dialysis.
All ROTI®elutions tubes are free of DNase, RNase, Proteinase and PCR products. All membranes are made from regenerated cellulose and can thus be exposed to a pH range of 2–12, to a temperature of +60 °C, and also to a variety of organic solvents. Additionally, the membranes are free of sulphate and heavy metals and were treated with EDTA. Hence, macromolecules (like proteins or nucleic acids) or other biological particles may be eluted and dialysed in native conformation, and are very well suited for subsequent activity tests.

- Ultrapure
- Easy-to-handle
- Very gentle process
- Typical recovery rate of >95%
- Suitable for elution from agarose and PAGE
- Suitable for dialysis of biomolecules
- Suitable for oligoncleotides, dsDNA, ssDNA, RNA, proteins and protein/nucleic acid complexes
- Compatibel with all popular electrophoresis units

Application examples

Purification of DNA and proteins from gels, elution of genomic DNA or total RNA, preparation of DNA fragments prior to cloning, purification of siRNA for RNAi assays, purification/desalting of oligonucleotides/primers, purification of RNA or DNA for transfection or transformation, desalting or buffer change of protein solutions.
Please order the respective ROTI®elution Tube Tray separately.

Directions for use

ROTI®elution tubes are very easy to handle, and therefore can be used in both individual tests and high-throughput applications. Thanks to the screw cap, the vials are easy to open, can easily be filled with gel slices and buffer and can be securely sealed.
The practical elution vial holder has sufficient stability for safe use in electrophoresis cell. Under current flow, the DNA/RNA/protein molecules initially migrate from the gel slice until they are halted by the dialysis membrane. By briefly reversing the polarity of the electrical field, the molecules can be separated from the membrane and pipetted out of the tube together with the buffer. By carefully selecting the tube and the amount of buffer, it is in many cases possible to achieve a high concentration directly within the elution buffer. The buffer can then easily be concentrated by using the usual methods (e.g. precipitation).
ROTI®elution tubes with MWCO 1, 25 and 50 kDa are wet packed in stabilising solution (25 % ethanol, 2 mM EDTA) and should stored under refrigeration. All other elution vials are dry packed and can be stored at room temperature.

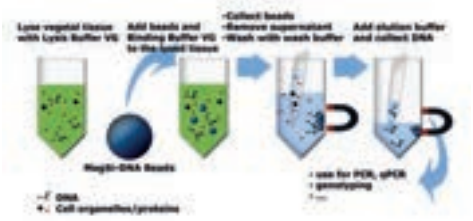
Magnetic Beads – Kits for DNA Isolation

MagSi-DNA Vegetal

Magnetic beads



- Cost-effective – Low price per sample
- Superior lysis – Lysis Buffer VG is specially designed for lysis of vegetal tissues
- Flexible protocol – Kit components can be individually adjusted in volume
- Easy to automate – Designed for highthroughput, robotic, liquid handling processes
- Good yields and recovery – Very well suited for typical downstream applications (PCR, qPCR, NGS, Genotyping)
- Excellent DNA purity, $A_{260/280}$= 1,7–2,0

MagSi-DNA Vegetal

for molecular biology

magtivio.

Magnetic beads for nucleic acid isolation from plant tissue.

The MagSi-DNA Vegetal kit allows for extraction of genomic DNA from plant tissue. It has a very flexible setup, as the volume of each of its components can be adjusted to facilitate your specific extraction protocol requirements.
Lysis Buffer VG is designed for extremely good breakdown of the tough components in vegetal materials, allowing optimal release of the DNA to be isolated. The extraction itself is based on the binding of DNA to MagSi-VG I magnetic beads, and works in combination with the proprietary Binding Buffer VG. After a series of washing steps in which the magnetic beads (with DNA) are held by the magnet, the DNA is eventually released in an elution step.

MagSi-DNA Vegetal helps you extract DNA from seeds but also from leaves of e.g. cucumber, bell pepper, tomato, wheat, flowers, sugar beet, potato, chicory or maize.
Bigger packages available on request.

The kit contains

Magnetic beads MagSi-VG I, Lysis Buffer VG, Binding Buffer VG, Wash Buffer I, Wash Buffer II, Elution Buffer. Contents of this Kit may not be bought separately.

Storage temperature: +15 to +25 °C

MagSi-gDNA blood

Magnetic beads

- Suitable for whole blood, drawn in Citrate-, EDTA- or Heparin tubes
- Reproducible, high yield of DNA - 3–15 µg from 200 µl fresh or frozen whole blood
- Excellent DNA purity, $A_{260/280}$ = 1,7–2,0
- Preparation time: 20–25 mins. (after lysis)
- Suitable for many genomic applications including PCR, DNA sequencing and Southern blotting
- Simple bind-wash-elute procedure
- Protocol easily adjustable for different sample volumes
- Suitable for manual and automated use
- Safe sample handling with minimal user input
- Also suitable for isolation of DNA from saliva, serum/plasma and cultured cells

for molecular biology

magtivio.

Magnetic beads for isolation of genomic DNA from whole blood.

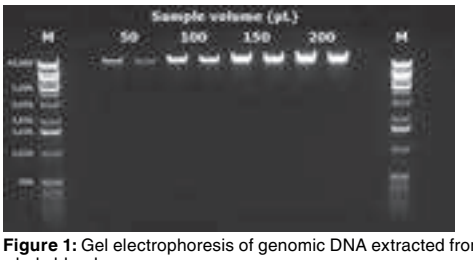

Figure 1: Gel electrophoresis of genomic DNA extracted from 50-200 µl fresh whole blood.

MagSi-gDNA blood kit allows fast and cost-effective extraction of genomic DNA from a wide range of sample volumes. The paramagnetic bead-based kit can be used on whole blood samples drawn in EDTA-, citrate- or heparin tubes. Due to the ready to use reagents and simple protocol the kit is easy to use and easy to automate. As a linear volume to volume ratio is used between whole blood sample and reagents, it is possible to use the kit in any situation where genomic DNA out of blood is needed.
MagSi-gDNA blood kit is easy to automate. It is compatible with many different automated liquid handling systems (e.g KingFisher™, PrimaRWS®, PIPETMAX® and JANUS®). Furthermore, it is performed with short and easy protocols and suitable for small, medium and high-throughput automation using variable volume sample input.

This magnetic bead-based kit is a fast and economic purification system for extraction of genomic DNA from mammalian samples. The MagSi-gDNA blood kit includes magnetic beads, buffers and Proteinase K, and is easy to automate for high-throughput processing.
Bigger packages available on request.

The kit contains

Magnetic beads MagSi-DNA 3.0 COOH, Proteinase K, Lysis Buffer, Binding Buffer, Wash Buffer I, Wash Buffer II, Elution Buffer. Contents of this Kit may not be bought separately.

Storage temperature: +4 °C

MagSi-DNA saliva

Magnetic beads

- Fast and easy processing using magnetic beads
- Suitable for automated liquid handlers
- Yields high quality genomic DNA of excellent purity, $A_{260/280}$= 1,7–2,0
- Compatible with fresh saliva samples as well as sample collection and preservation kits
- Sample collection is non-invasive, risk free, and painless
- More affordable than blood testing

MagSi-DNA saliva

for molecular biology

magtivio.

Magnetic beads for isolation of genomic DNA from saliva or buccal swabs.

The MagSi-DNA saliva kit provides a fast and simple procedure for DNA extraction from saliva. The kit is compatible with fresh saliva samples as well as saliva preserved in standard saliva sample collection kits. Genomic DNA obtained with MagSi-DNA saliva is of the highest quality and is compatible with applications like PCR, Southern Blotting, genetic typing or mutation analysis.
MagSi-DNA saliva is based on magnetic bead technology, and is suitable for extraction of DNA from human saliva or buccal swabs. The kit includes magnetic beads, buffers and Proteinase K, and is easy to automate for high-throughput processing.

Saliva is rapidly becoming an attractive alternative source of DNA for genetics testing. Unlike blood or tissues, saliva can be collected non-invasive by individuals with little training, and without the need for expensive equipment. Saliva preserved in collection kits is stable for years at room temperature, facilitating easy transportation and storage. Bigger packages available on request.

The kit contains

Magnetic beads MagSi-DNA 3.0 COOH, Proteinase K, Lysis Buffer, Binding Buffer, Wash Buffer I, Wash Buffer II, Elution Buffer. Contents of this Kit may not be bought separately.

1648.2	960 unit(s)	cardboard	2.230,65

Specific Application of Silica- and of Carboxylated Beads

Bead surface	Silica beads	Carboxylated beads
Compatible Buffer Systems	Chaotropic buffers	PEG-based, low pH or chaotropic buffers
Binding Mechanism	Precipitation with chaotropic salts	Precipitation by polymers like PEG, divalent cations (e.g. Mg^{2+}) or chaotropic salts
Elution	Low salt conditions	Low salt conditions or pH shift from acidic to alkaline conditions
Recommended use	Recommended in case chaotropic conditions can be applied.	Recommended if flexibility in buffer systems is necessary or if non-chaotropic conditions have to be applied. Results in **higher purity and recovery rate** under **non-chaotropic conditions.**

MagSi-Wash Buffer III

for molecular biology

magtivio.

Solution for optimising DNA isolation using MagSi-DNA Kits.

Additional Washing Buffer which may be used with the kits MagSi-gDNA blood-, -saliva- or -Vegetal kit. It is not included in the three kits, but may be bought separately.
Wash Buffer III eliminates the need for a drying step to remove traces of ethanol, resulting in faster protocols and DNA with higher purity.

For use with MagSi-gDNA blood-, -saliva- or -Vegetal kit.

Storage temperature: +4 °C

allround COOH	variable	Medium magnetic separation	1558
3.0 COOH	variable	Ultra fast magnetic separation, for rapid preparations	1559

Bead Solutions for DNA Isolation

DNA yield (20 µl beads): >3 µg

MagSi-DNA

Magnetic beads

Magnetic beads can be used as solid support phase in DNA extraction and purification protocols by a simple bind/wash/elute principle. The products in this category are intended for own development of protocols and are suitable for various sample sources and buffer systems. MagSi-beads for genomic applications are available with a range of physical properties and a silica or carboxyl modified surface.

MagSi-DNA Trial kit

for molecular biology

magtivio.

Magnetic beads for covalent coupling of chosen ligands.

A complete set of the 8 types of MagSi beads for genomic applications, offered in a single kit for trial purposes in development of new assays. Intended for nucleic acid isolation from various sources (blood, cells, bacteria etc.) for manual and automated work-flow.

The kit contains

2 ml each of MagSi-DNA, MagSi-DNA COOH, MagSi-DNA allround, MagSi-DNA allround COOH, MagSi-DNA 600, MagSi-DNA 600 COOH, MagSi-DNA 3.0 and MagSi-DNA 3.0 COOH.

MagSi-Beads and Kits

Magnetic Beads for Isolation of Biotinylated Nucleic Acids

MagSi-STA

Magnetic beads

Magnetic silica particles with high quality streptavidin covalently bonded to the surface of the particle. Applications include immunoassays and capture or purification of biotinylated molecules.

Various types of this product are available, with different mean size, streptavidin coating chemistry, and binding capacity.
Bigger packages available on request.

MagSi-STA Trial kit

for protein biochemistry and molecular biology

magtivio.

Magnetic beads for capture or purification of biotinylated molecules.

The MagSi-STA Trial kit allows the screening of different types of streptavidin in parallel. The kit is especially useful when required specifications for magnetic beads are not known.

This kit includes 1 mL of the 8 different MagSi-STA products and is intended for evaluation purposes during trial phase of developing new assays, or bead replacement in existing assays.

Separators

MM Separator for automated processing

These MM-Separators are designed for fast and efficient collection of magnetic beads in a variety of microplates.
Their SBS footprint allows placement on standard automated liquid handling workstations. Small skirts on each side of the aluminium block ensure correct and stable placement of microplates onto the separators.

Directions for use

Compatible with 8- or 12-channel multipipettes.

Technical specifications:

Art. No.	2162.1	2166.1	2167.1	2169.1

MM Separator

Made from acrylic glas for optimal visual inspection needs, and from chemically resistant polyoxymethylene (POM) (versions “P”) for routine use of organic solvents.

Application examples

MM-Separators are designed for optimal magnetic bead separation in terms of speed and bead pellet positioning, as well as stability and user-friendliness.

magtivio’s MM-Separators are intended for magnetic separation of MagSi beads from liquid samples for isolation and purification of nucleic acids and proteins, immunoprecipitation, immunoassays (ELISA), cell sorting, and purification of biomolecules.

Technical specifications:

Art. No.	2138.1	2151.1	2141.1	2154.1	2155.1	2157.1

MM Separator M12 + 12

magtivio.

Directions for use

MM-Separators M12 + 12 enable easy separation of beads from liquids for processing low amounts of samples with working volumes from 10 µl to 2 ml. In the centre, 12 magnets allow accommodation of up to 24 centrifuge tubes.

Application area: manual use with 1.5 and 2 mL microtubes.

Pic.	Type	Art. No.	Pack Qty.	€
(1)	M12 + 12	**2138.1**	1 unit(s)	427,85

MM Separator M96

magtivio.

Directions for use

MM-Separators M96 enable easy separation of beads from liquids for multiple sample processing with 8- or 12-channel pipettes. The separators hold 24 magnets that are placed for magnetic separation of beads in 96 wells.
MM-Separators M96 allow magnetic particles to be pulled to the side of wells for optimal access to the bottom and easy supernatant removal. The product is suitable for U- and V-bottom shaped 96 well microplates and for most PCR plates, skirted or semi- and non-skirted.

Application area: anual use with 96 well microplates and PCR plates.

Compatible with 8- or 12-channel multi-pipettes.

Pic.	Type	Art. No.	Pack Qty.	€

FTA® Technology

Collect, transport, archive and isolate nucleic acids – all at room temperature.

FTA® Cards utilize patented Whatman FTA® Technology that simplifies the handling and processing of nucleic acids. The cards contain chemicals that lyse cells, denature proteins and protect nucleic acids from nucleases, oxidative and UV damage.

FTA® Cards rapidly inactivate organisms, including bloodborne pathogens, and prevent the growth of bacteria and other microorganisms. Capture of nucleic acid is a most simple and highly rapid process which can be performed quite easily also by untrained personal. The captured DNA is stable for years at room temperature.

Indicating FTA® Cards change colour upon sample application to facilitate handling of colourless samples.
Since FTA® Cards are suitable for virtually any cell type, this is a very versatile, ready-to-use and easy-to-handle tool for storage and isolation of genomic DNA.

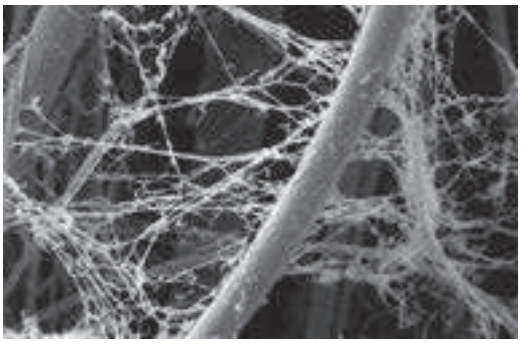

Figure: Electron micrograph showing DNA entrapped within the FTA Matrix (magnification x 10,000).

FTA® Cards

Speciality cards for space- and time-saving collection, archival storage, and isolation of genomic DNA from a variety of sample material. Originally Whatman®.

- Capture nucleic acid in one easy step – simply apply blood or tissue material to the FTA® Card
- Captured nucleic acid is ready for downstream applications in less than 30 mins.
- Genomic DNA collected on FTA® Cards is stable for years at room temperature
- Suitable for virtually any cell type
- Indicating FTA® Cards change colour upon sample application in order to facilitate handling of colourless samples

Simply apply your sample to the FTA® Card. Liquids are pipetted or trickled, tissue samples are pressed onto the surface. Cell membranes and organelles are automatically lysed and the released nucleic acids are entrapped in the fibres of the matrix. The nucleic acids remain immobilized and are stabilized for transport, immediate processing or long-term storage. Libraries and species DNA collections can be stored simply in a folder; single DNA samples can be filed in your lab manual. FTA® Cards facilitate sample collection in remote locations and simplify sample transport, thus, you can collect samples in the field without worrying about refrigeration.
Captured nucleic acids are used for downstream experiments by simply taking a small punch from the FTA® Card, wash with FTA® Purification Reagent and rinse with TE buffer (ROTI®Stock 100x TE Buffer, Art. No. 1052.1). DNA on the washed punch is ready for use in a variety of applications given below. Genomic DNA stored on FTA® Cards at room temperature for over 14 years (and counting) has been successfully amplified by PCR. For RNA, being more sensitive than DNA, we recommend rapid analysis after only few weeks' storage at room temperature.

FTA® Cards contain chemicals that lyse cells, denature proteins and protect nucleic acids from nucleases, oxidative and UV damage. FTA® Cards rapidly inactivate organisms, including blood borne pathogens, and prevent the growth of bacteria and other microorganisms. Each card can be used for archival storage or multiple downstream applications of 1–2 (MINI) and 1–4 (CLASSIC) independent samples.

Suitable for blood, cultivated cells, buccal cells, plant material, bacteria, microorganisms, tissue and tissue homogenisations, virions, M13 plaques and more.
Applications: storage of genomic DNA samples and libraries, collection of nucleic acid from animal tissue or cell cultures, or from plants or microorganisms during in-field-experiments.
Downstream-Experiments: e. g. PCR, real-time PCR, SNP and STR analysis, transgenetic identification, whole genome amplification, HLA typing, and genotyping **in** forensics, molecular biology, food and agriculture testing, drug discovery, genomics, species identification, and more.

FTA® CloneSaver Cards

Speciality cards for space- and time-saving archival storage and isolation of Plasmid and BAC DNA. Originally Whatman®.

- Capture DNA in one easy step by simply applying the samples (recombinant bacteria, glycerol stocks etc.) to the card
- Captured nucleic acid is easily accessible for downstream applications
- DNA collected on FTA® CloneSaver Cards is stable for years at room temperature
- Store up to 96 clones on each card
- Standard 96well plate format and compatible with multi-channel pipettors

Apply few µl bacterial culture, resuspended colony or glycerol stock. Cells are lysed and plasmid or BAC DNA is stabilized for long-term storage or immediate processing.
Captured nucleic acids are used for downstream experiments without the need for culture regrowth and plasmid purification. Simply take a small punch from the FTA® Card and wash with TE buffer (ROTI®Stock 100x TE Buffer, Art. No. 1052.1). DNA on the washed punch is ready for elution or for direct use in PCR, transformation, amplification by rolling circle followed by sequencing, and so on.

FTA® Foam Tip Applicator

For application of saliva and buccal cells to FTA® Cards. Originally Whatman®.

Non-abrasive foam head is same size as sample area on FTA® Cards and is, therefore, best suited for application of buccal samples. The oral mucosa is grazed with the foam head, which is then pressed onto the card field. We recommend the use of FTA® Cards with colour indicator (CLASSIC Art. No. CL 91.1 and MINI Art. No. CL94.1) for buccal and saliva samples.

Punches Harris Uni-Core

The disposable Uni-Core Punch addresses your laboratory's manual punching requirements. Designed for use with Whatman® FTA® Cards, FTA® Elute Cards, and EasiCollect device.
Uni-Core Punch is a disposable punch which has a polished steel tip that is case-hardened and can be sterilized. Each tip provides up to 500 punches before disposal. Uni-Core Punch is available in diameters from 1,0 to 6,0 mm for a variety of sampling needs. It is housed in a plastic handle and disposable for contamination control. Stainless steel cutting edges enable manual coring, retrieval, and controlled ejection of the FTA® punch. Manual punching is preferred for laboratories with low sample volumes punching 1 to 50 samples per day.

Directions for use

By pressing the Micro tip down a tiny slice is punched from the FTA® card. This DNA containing sample is then washed and directly applied to downstream experiments.

The set contains

Two cutting mats are included in the small packages (4 punches). Colour of the punches supplied may differ to that shown in the picture.

Enzymes

Ligase

DNAse-free

Ligase T4

5 U/µl, for molecular biology

ATP-dependent recombinant ligase for molecular cloning.

ATP-dependent recombinant ligase for molecular cloning, site-directed mutagenesis, pitch repair in duplex DNA, RNA or DNA/RNA hybrids and ligation-mediated PCR.

- Cloning of PCR and restriction fragments
- Self-circulation of linear DNA
- Site-directed mutagenesis

T4 DNA Ligase catalyses the formation of a phosphodiester bond between adjacent 5'-phosphate and 3'-hydroxyl end groups in duplex DNA or RNA.

The kit contains

T4 DNA Ligase
Ligation buffer (10x)
ATP solution (25 mM)
The individual components of this kit cannot be purchased separately.

The kit consists of color coded tubes for easier identification to avoid confusion of reagents.

Storage temperature: –20 °C
Transport temperature: cooled

DNAse-free

Ligase quick

5 U/µl, for molecular biology

ATP-dependent T4 DNA ligase for efficient ligation of sticky and or blunt ends.

ATP-dependent recombinant ligase for molecular cloning, site-directed mutagenesis, pitch repair in duplex DNA, RNA or DNA/RNA hybrids, ligation-mediated PCR.

- Ligation in 5 to 15 minutes
- Cloning of PCR products and restriction fragments
- Suitable for site-directed mutagenesis

Quick Ligase catalyses the formation of a phosphodiester bond between adjacent 5'-phosphate and 3'-hydroxyl end groups in duplex DNA or RNA.

The kit contains

Quick Ligase
Ligation buffer (2x)
ATP solution (25 mM)
The individual components of this kit cannot be purchased separately.

DNAse-free

Ligase Tth

5 U/µl, for molecular biology

NAD-dependent ligase for molecular cloning.

Tth DNA Ligase catalyzes the NAD-dependent formation of phosphodiester bonds between adjacent 3'-hydroxyl and 5'-phosphate termini in double-stranded DNA. This ligase is inactive against single-stranded DNA or RNA and blunting DNA.

- stable at high temperatures
- ligates double-stranded DNA
- Repairs single strand breaks in double stranded DNA

The Tth DNA ligase is stable and active at much higher temperatures than conventional DNA ligases. The optimal ligation temperature range is 7-10 °C higher than that of the T4 DNA ligase and is determined by the Tm of the substrates. High ligation temperature eliminates the nonspecific ligation.

The kit contains

Quick Ligase
Ligation buffer (10x)
The individual components of this kit cannot be purchased separately.

The kit consists of color coded tubes for easier identification to avoid confusion of reagents.

Storage temperature: –20 °C
Transport temperature: cooled

Proteinase K

Endopeptidase

Proteinase K (from *Tritirachium album*) is a non-specific protease of the serine protease family.
Proteinase K is used for the cleavage of proteins in nucleic acid preparations. It is mainly used in nucleic acid purification or for the removal of nucleases.
Proteinase K is active under a wide range of reaction conditions, including elevated temperatures and presence of SDS.

Directions for use

Activity: (Haemoglobin, pH 7.5; 25 °C) 30 mAnson-U/mg
Foreign activity: RNAse and DNAse not detectable
Optimum temperature: +65 °C.
Activity at +65 °C is ca. 12 x higher than at +25 °C. Over +65 °C, inactivation due to denaturation.
Activators: Denaturating agents like SDS (0,5-1 %), urea.
Inhibitors: Inhibition with Hg^{2+}-ions, DFP, PMSF and phenol. Not inhibited by EDTA, sulfhydryl reagents and trypsin or chymotryps ininhibitors.
Stability: pH 4.0-12.5. pH optimum: 8,0.
Also stable even when denaturing agents, e.g. SDS and urea are present.
Stabilisers: Ca^{2+}-ions (1-5 mM) prevent autolysis.

DNAse-free RNAse-free

Proteinase K

≥35 U/mg, BioScience Grade, lyophilised

High-quality endopeptidase for molecular biology. Isolated from fungi (*Tritirachium album*).

Endopeptidase for the degradation of proteins with very high solubility, specific activity and DNA purity. Extra high purified.

Advantages:

- High solubility
- High specific activity
- Extremely low DNA content

Activity: ≥ 35 U/mg lyophilizate
Specific activity: ≥ 45 U/mg protein
DNA content: ≤ 0.1 pg/mg

Directions for use

Working solution: 50 µg/ml
Reaction buffer: 50 mM Tris-HCl; pH 7.5; 5 mM $CaCl_2$; 0.5 % SDS

Stock solution: 20 mg/ml in water. Storage temperature (stock solution): -20 °C

Storage temperature: –20 °C
Transport temperature: ambient temp.

Ribonucleases

DNAse-free Protease-free

Ribonuclease

>70 U/mg (Kunitz), salt-free, protease-free

Purified by chromatography, for biochemistry.

Extracted from bovine pancreas; free from salt, without proteases and chromatographically cleaned with specific activity of 70 U/mg (Kunitz). RNAse mixture containing approx. 70–80 % RNAse A.

DNAse free RNAse ist prepared by cooking the solubilised ribonuclease aliquots for 15 min. Let cool to room temperature on bench top.

Stock solution: 10 mg/ml in water.
Working solution: 5–20 µg/ml in 10 mM Tris (pH 7,5), 15 mM NaCl.
Store solution in aliquots at –20 °C.

M ~13 700 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

7164.2	1 g	glass	327,90

DNAse-free Protease-free

Ribonuclease H

5 U/µl, for molecular biology

For hydrolytic cleavage of phosphodiester bonds between RNA and DNA.

Non-specific endoribonuclease that specifically cleaves RNA into RNA:DNA hybrids. At least four continuous base pairs (RNA:DNA) are required for activity. The RNAse H cleaves RNA to release 5' oligoribonucleotides.

RNAse H does not degrade single and double-stranded DNA or unhybridized RNA.

The kit contains

RNAse H
Reaction buffer (10x)
The individual components of this kit cannot be purchased separately.

The kit consists of colour coded tubes for easy identification of the reagents.

250 U correspond to 50 preparations with a volume of 20 µl.

M ~13 700 g/mol

Storage temperature: –20 °C
Transport temperature: cooled

3728.2	250 µl	plastic	886,90

DNAse-free RNAse-free

RNAse Inhibitor

40 U/µl, for biochemistry and molecular biology

Inhibitor of common enzymes such as RNAse A, B and C

The RNAse Inhibitor is a 50 kDa recombinant human placental protein expressed in *Escherichia coli*. It inhibits ribonuclease (RNAse) activity of common eukaryotic enzymes such as e.g. RNAse A, RNAse B, RNAse C.

- Inhibits eukaryotic type ribonucleases e.g. RNAses A, B and C
- For RNA isolation and purification
- Suitable for c-DNA synthesis, RT-PCR and RT-qPCR
- Wide pH range

Directions for use

The RNAse inhibitor is intended for use in applications where the presence of RNAses may pose a risk to RNA quality and experimental results, e.g. RNA isolation, cDNA synthesis, RT-PCR, *in vitro* transcription and translation or RNAse-free monoclonal antibody production.

Storage temperature: –20 °C
Transport temperature: cooled
WGK 1

3727.2	250 µl	plastic	579,45

DNAse-free Protease-free

Ribonuclease A

90 U/mg (Kunitz), BioScience Grade, salt-free

Acc. to Hirs, extracted from bovine pancreas.

Extracted from bovine pancreas for RNA separation, especially when isolating RNAfree DNA. The enzyme cleaves RNA and produces 3' terminal nucleoside phosphates.
This quality product for molecular biology is free from salt, without proteases and is chromatographically homogeneous. Unit definition acc. to Kunitz.

The DNAse content of the RNAse powder ist below detection limit. However, we nevertheless recommend pretreatment of the ribonuclease prior to using it for DNA isolation. DNAse free RNAse ist prepared by dissolution of the RNAse powder in water, followed by cooking of the solubilised ribonuclease aliquots for 15 min. Let cool to room temperature on bench top.

Directions for use

Working solution: 2–10 µg/ml in 10 mM Tris (pH 7,5), 15 mM NaCl.
Note: RNAse precipitates when concentrated solutions are heated/cooked at pH ≥7,0. Store solution in aliquots at –20 °C

Stock solution: 10 mg/ml in water (pH ≤6,0) or 0,01 M sodium acetate (pH 5,2). Do not heat RNAse prepared in sodium acetate.

M ~13 700 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

Zymolyase®

β-1,3-glucan laminaripentaohydrolase, Lyticase

Zymolyase®, produced by a submerged culture of *Arthrobacter luteus,* has strong lytic activity against living cell walls of various strains of yeast cells. Hence, it is frequently used in order to produce protoplasts or spheroplasts.
The essential enzyme for the lytic activity of Zymolyase® is β-1,3-glucan laminaripentaohydrolase. It hydrolyzes linear glucose polymers with β-1,3-linkages and releases specifically laminaripentaose as the main and minimum product unit.

Directions for use

Other enzymatic activities contained: β-1,3-glucanase, protease, mannanase. Trace amounts of amylase, xylanase, phosphatase.
Stability: At 30 °C 70 % of the lytic activity is lost after 3 months.
Optimum temperature and pH: at pH 7,5 – 35 °C for lysis of viable yeast cells, at pH 6,5 – 45 °C for hydrolysis of yeast glucan.
Specificity (lytic spectrum): *Ashbya, Candida, Debaryomyces, Eremothecium, Endomyces, Hansenula, Hanseniaspora, Kloeckera, Kluyveromyces, Lipomyces, Metschnikowia, Pichia, Pullularia, Torulopsis, Saccharomyces, Saccharomycopsis, Saccharomycodes, Schwanniomyces*, etc.
Stock solution: As stock solution, a 2 to 10 % (20 or 100 mg/ml) Zymolyase® solution may be prepared, solubilizing the enzyme in water, 10 mM sodiumphosphate buffer (pH 7,4) or 50 mM Tris-Cl (pH 7,5), respectively, according to the buffer system to be used downstream and containing 5 % glucose and 50 % glycerol each. The Zymolyase® tends to not dissolve completely. Do not heat for solubilization, but rather use the Zymolyase® as suspension. The suspension may be stored in aliquots at –20 °C.
Working solution: For use in the respective buffer system, dilute the stock solution to the working concentration of 2–5 mg/ml and optionally sterilize by filtration (0,2 µm). In most cases, however, Zymolyase® is solubilized in freshly prepared working buffer (for instance rescue buffer 50 mM Tris-Cl, pH 7,5, 10 mM EDTA, 0,3 % β-Mercaptoethanol) in the required working concentration directly prior to use.
Sterile filtration: Avoid using nitrocellulose filters when sterilizing – Zymolyase® may be adsorbed to nitrocellulose membranes.

Unit definition

One unit of lytic activity is defined as the enzyme amount causing a decrease of 30 % in absorbance at 800 nm using 6 mg Brewer's yeast as substrate in Phosphate buffer (pH 7,5) at 25 °C. Lytic activity varies depending on the particular yeast strain, the growth stage of the yeast, and cultural conditions.

Zymolyase® 20T

≥20 U/mg, for biochemistry and molecular biology

For lysis of yeast cells. Isolated from *Arthrobacter luteus*.
Zymolyase® 20T is prepared by ammonium sulfate precipitatation.

Please note: Zymolyase® does not dissolve completely in higher concentrations.

Storage temperature: +4 °C
Transport temperature: cooled

Precipitation & Concentration

DNA-free

Glycogen

lyophilized, made of oysters

For molecular biology and biochemistry.

Glycogen type 2.
Long-chain polysaccharide made of glucose. Most frequently used in biochemistry and as “carrier” during precipitation of nucleic acids. Recovery of precipitated DNA is significantly enhanced by addition of 50 µg/ml glycogen; even starting from solutions with very low DNA concentrations, efficient precipitation can be performed.
Contains no nucleic acid and doesn‘t hinder enzymatic downstream applications.

Glycogen contains a central protein and should not be applied if DNA is to be used in protein binding-assays following precipitation. In these cases we recommend to use our glycogen-free coprecipitants.

Stock solution: 5 mg/ml in distilled, sterile water
Working concentration: 50 µg/ml

WGK 1

► For further reagents for nucleic acid precipitation, e. g. ethanol, ammonium acetate, PEG etc., see chapter Chemicals A-Z.

Tips for Application of Precipitation Salts

Precipitation Salts	Stock solution	Amount applied	Recommended for	Not recommended for
Ammonium acetate	7.5 M	1/2 volume	Removal of nucleotides or other contaminants	Kinase downstream experiments (phosphorylation)
Lithium chloride	8.0 M	1/10 volume	RNA precipitation	Very small RNA
Sodium acetate	3.0 M (pH 5.2)	1/10 volume	Routine DNA precipitation	Removal of nucleotides or other contaminants
Sodium chloride	5.0 M	1/20 volume	SDS containing solutions	Routine precipitations

Centrifugation Units ROTI®Spin

For purification and concentration of biomolecules and for purification of solutions.

- Applicable for nucleic acids, proteins/peptides, other biomolecules >6 kDa and very small bioparticles
- Can be used to replace standard techniques like precipitation, dialysis, gel filtration, gel purification, column chromatography, gradient centrifugation etc.
- Gentle: No shearing of DNA of up to 100 kb, proteins remain native and enzymatically active
- Applicable for purification of all labelled probes (isotope-, fluorescent-, chromogenic labelling)
- Very high recovery rates of >90% (when using devices of appropriate MWCO)

Centrifugal devices for ultrafiltration of biomolecules. The membranes made of highly chemical-resistant polyethersulfone have been tightly sealed to prevent leakage and loss of samples. Furthermore, the membranes underwent special treatment minimising the binding of biomolecules, in order to optimise sample recovery rates.
ROTI®Spin Centrifugal Devices can be applied to a variety of applications and can be used to replace tedious and labour-intensive methods like gel filtration, gel purification or precipitation. Application is time-saving and very simple - only few centrifugal steps are necessary to concentrate and recover your sample. During this, the sample remains untouched in the upper reservoir, and cross-contamination is efficiently prevented even when large numbers of samples are handled. Centrifugation can easily be performed in the cold room or at specially designated benches like isotope laboratories or in laminar flow hoods.

Application examples

Desalting or buffer exchange following restriction digest, PCR or such; separation of free nucleotides and polymerised DNA; removal of contaminating compounds (like DNA) from stock solutions (e.g. PCR-buffers); concentration of DNA or proteins; separation of proteins of different size; sample preparation prior to HPLC.

Overview for selecting the appropriate pore size

MWCO	Molecule size	DNA size
3 kDa	10 – 20 kDa	<50 bp
10 kDa	30 – 90 kDa	50 – 200 bp
30 kDa	90 – 180 kDa	200 bp – 1 kb
100 kDa	>300 kDa	>1 kb

Centrifugation Units ROTI®Spin

Carl ROTH.

Directions for use

Sample volumes:
Maximum sample volume: ROTI®Spin MINI 50-500 µl
Final concentrate volume: ROTI®Spin MINI 15-20 µl

MWCO:
For convenient and successful application, centrifugal devices with membranes in 4 colour-coded molecular weight cut-offs (MWCO) are available. In order to choose the appropriate MWCO please use the following thumb-rule:
Centrifugation of proteins/peptides: MWCO ≤1/3 of sample molecule size.
Centrifugation of nucleic acids: MWCO ≤½ sample molecule size.

Type	MWCO (kDa)	Colour	Art. No.	Pack Qty.	€

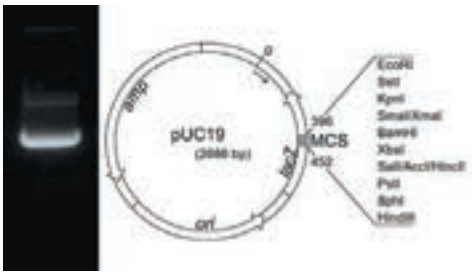
MINI-30	30	red	**CL14.1**	25 unit(s)	129,15
MINI-100	100	colourless	**CL15.1**	25 unit(s)	129,15



DNA-/RNA Analysis

Plasmid DNA

Plasmides

The following plasmid DNA was prepared in low nuclease host bacteria and isolated through ion exchange chromatography. It is available in supercoiled form (ccc-form >95%) and, as a high-purity DNA ($OD_{260/280}$ > 1,70), it is ideal for different applications:

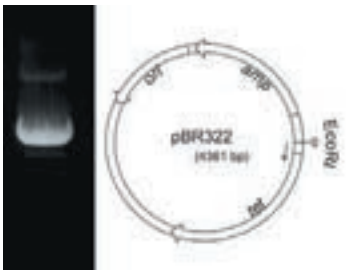
- Controlling transformation efficiency
- Comparison with plasmid ccc-forms of unknown size
- Cloning DNA-fragments
- Restriction (Preparing DNA-length markers)
- Calibrating DNA-separating or DNA-preparing processes or equipment
- Blocking DNA-chips with plasmid DNA of a defined sequence

Plasmid DNA pUC19

lyophilized

High-purity plasmid-DNA of pUC19 for genetic engineering

$OD_{260/280}$: >1.70
Genomic DNA: <2 %
oc form: <3 %
ccc form: >95 %
Base pairs: 2686



pUC19 is a standard high-copy cloning vector for *E. coli* recombinants. The position of the Multi Cloning Site (MCS), which is inserted in frame into the LacZ-gene, enables a blue-white selection of insert containing plasmid DNA by α-complementation. The copy number of plasmids per cell depends on the temperature and is approx. 70–80 at 37 °C and over 200 at 42 °C.

pUC19c, Acc. No. L09137
full llength: 2686 bp

Storage temperature: –20 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€

Plasmid DNA pBR322

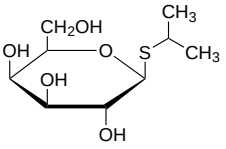
lyophilized

High-purity plasmid-DNA of pBR322 for genetic engineering

$OD_{260/280}$: >1.70
Genomic DNA: <2 %
oc form: <3 %
ccc form: >95 %
Base pairs: 4361

The circular sequence was numbered in such a way that 0 lies in the middle of the singular *EcoR* I restriction site. The copy number of pBR322 is limited by the gene product of *rop* to 20 copies per cell. However, by adding chloroamphenicol (final concentration 170 µg/ml) to log-phase cultures and then incubating for 8 hours, the copy number can be increased considerably.

pBR322, Acc. No. V01119
full lenght: 4361 bp



Storage temperature: –20 °C
Transport temperature: ambient temp.

Blue-/White Selection

IPTG

≥99 %, BioScience Grade, dioxane-free, animal-free

For molecular biology.

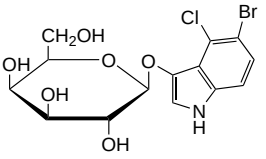
Lactose analogon. Glucose-galactose-disaccharide. *lac*-promotor is induced by IPTG via inhibition of *lac*-repressor. Recommended for induction of *lac*-regulated vectors in expression assays, for instance blue-/white selection of recombinant *E. coli*, in bench-top as well as in production scale.

Mechanism

Being a galacto pyranoside, IPTG inhibits the lac repressor, therefore leading to the induction the lac promotor. Subsequently, using the plasmid as matrix the C-terminal 146 amino acid fragment of the bacterial β-galactosidase is expressed, which functions as so called □-donor and complements the C-terminally deleted bacterial β-galactosidase. The then functional β-galactosidase restricts the galactoside X-Gal, resulting in a blue-coloured dye – therefore, these lac+ clones are coloured dark blue. Since the C-terminal part of the □-donor is located **upstream** and the N-terminal part is located **downstream** of the multi cloning site of the plasmid, inserted DNA normally leads to frame shift or at least to major chain elongation, resulting in an unfunctional □-donor and no functional galactosidase – recombinant clones are white. The appearance of light blue clones either results form very short insertions or from the fact that in some plasmids the C-terminal fragment cloned upstream of the MCS is sufficient for □-complementation and restriction of a small amount of X-Gal.

Directions for use

Stock solution: 0,5 M (1 g / 8,4 ml) in water (sterilise through 0,2 µm filter).
Final concentration in agar plates: 0,2 mM (add after autoclaving and cooling medium).
Final concentration in induction medium: 2 mM.



Stock solution: 0,5 M (1 g / 8,4 ml) in water (sterilise through 0,2 µm filter)

DNAse-free **RNAse-free** **Protease-free**

X-β-Gal

≥99 %, BioScience Grade

Colorimetric substrate of β-galactosidase. For biochemistry and molecular biology.

Ideal for colorimetric detection of β-galactosidase activity, for instance during blue-/white selection.

Mechanism

Being a galacto pyranoside, IPTG inhibits the lac repressor, therefore leading to the induction the lac promotor. Subsequently, using the plasmid as matrix the C-terminal 146 amino acid fragment of the bacterial β-galactosidase is expressed, which functions as so called α-donor and complements the C-terminally deleted bacterial β-galactosidase. The then functional β-galactosidase restricts the galactoside X-Gal, resulting in a blue-coloured dye - therefore, these lac+ clones are coloured dark blue.
Since the C-terminal part of the α-donor is located **upstream** and the N-terminal part is located **downstream** of the multi cloning site of the plasmid, inserted DNA normally leads to frame shift or at least to major chain elongation, resulting in an unfunctional α-donor and no functional galactosidase – recombinant clones are white. The appearance of light blue clones either results form very short insertions or from the fact that in some plasmids the C-terminal fragment cloned upstream of the MCS is sufficient for α-complementation and restriction of a small amount of X-Gal.

Directions for use

Working solution: for blue/white selection of recombinant clones on agar plates use 0.3 µl stock solution per ml broth/agar.

Stock solution: 100 mg/ml (240 mM) in DMF, store at –20 °C in the dark

$C_{14}H_{15}BrClNO_6$ · M 408,6 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

α-Complementation (Blue-White Selection)

Being a galacto pyranoside, IPTG inhibits the *lac* repressor, therefore leading to the induction the lac promotor. Subsequently, using the plasmid as matrix the C-terminal 146 amino acid fragment of the bacterial β-galactosidase is expressed, which functions as so called α-donor and complements the C-terminally deleted bacterial β-galactosidase. The then functional β-galactosidase restricts the galactoside X-Gal, resulting in a blue-coloured dye – therefore, these *lac*+ clones are coloured dark blue. Since the C-terminal part of the α-donor is located **upstream** and the N-terminal part is located **downstream** of the multi cloning site of the plasmid, inserted DNA normally leads to frame shift or at least to major chain elongation, resulting in an unfunctional α-donor and no functional galactosidase – recombinant clones are white. The appearance of light blue clones either results form very short insertions or from the fact that in some plasmids the C-terminal fragment cloned upstream of the MCS is sufficient for α-complementation and restriction of a small amount of X-Gal.

α-Complementation – Protocol

Stock solution
IPTG: 0.5 M (1 g /8.4 ml) in water, freeze sterile filtered and aliquoted
X-β-Gal: 100 mg/ml (240 mM) in DMF, store aliquoted and in the dark at –20 °C

Approach
Add 10 µl IPTG solution + 10 µl X-β-Gal solution per 25 ml autoclaved, cooled Agar and pour plates.
Alternatively, mix 10 µl IPTG and X-β-Gal solution with approx.100 µll sterile water and plate onto a hardened 9 cm agar petri dish.

Hybridisation

Ready-Made Buffers & Supplements

ready-to-use

ROTI®Hybri-Quick

BioScience Grade, ready-to-use, for molecular biology

Ready-made buffer for DNA- and RNA hybridisation.

Roti®-Hybri-Quick ready-to-use solution is an all-purpose solution for DNA-hybridisation experiments.

Optimised sodiumphosphate buffer with superior signal-to-noise ratio. Compatible with all Southern- and Northern-hybridisations, all labelling and detection methods, and all types of membranes. Improved buffer formulation based on the hybridisation solution published by Church & Gilbert (*PNAS USA*, 81:1991-95).

- Suitable for prehybridisation, hybridisation and washing
- For Southern- and Northern-hybridisations
- Suitable for all membrane types

WGK 2

Remark: Contains SDS. Can be redissolved by heating (max. 45 °C).

Denhardt's solution, lyophilised powder

50x, BioScience Grade, for molecular biology

Blocking reagent for hybridisation and stripping.

Denhardt's lyophilised powder contains a mixture of different blocking agents that is used for nuclear acid hybridisation (Northern and Southern Blot) as well as for stripping of hybridised membranes. By prehybridisation the filter membranes with Denhardt's solution unspecific binding of DNA to the membrane is avoided.

Directions for use

For hybridisation use 10x Denhardt's solution with 6x SSC (ROTI®Stock 20x SSC, Art. No. 1054.1) supplemented with 100 µg/ml denatured salmon sperm DNA and 1 % SDS (ROTI®Stock 20 % SDS, Art. No. 1057.1).

The bottle contains powder mix for 50 ml 50x stock solution. Add 48,8 ml water to gain exactly 50 ml stock solution. Sterilise stock solution by filtration (0,2 µm) and store in aliquots of 10 ml at –20 °C .

Storage temperature: +4 °C

Tris Buffers

Tris (hydroxymethyl) aminomethane (or "Tris" for short) was first described[1] in 1897 and then proposed as a pH-stabilising reagent for biological systems[2] in 1946. On account of its high water solubility, its very large buffering capacity and the fact that it behaves inertly in a large number of enzymatic reactions, it has been used for many years as a base reagent for standard buffers in all fields of molecular biology.

[1]Piloty *et* Ruff (1897) *Proc. Soc. Exp. Biol. Med.* 6:233-234.

[2]Gomori (1946) *Ber. Dtsch. Chem. Ges.* 30:1656-1665.

In addition to the original, alkaline Tris, the pre-buffered Tris hydrochloride (Tris-HCl) is also available today. 1 M Tris buffer can be manufactured directly with a defined pH buffering range through skilful mixing of Tris (alkaline) and Tris-HCl. The following table specifies the mixing ratio for each Tris.
Please note: the pH buffered by the Tris mixture depends heavily on the temperature. The values found is the literature always refer to a temperature of 25 °C (unless specified otherwise).

S ready-to-use

ROTI®Stock 100x TE

100x conc., BioScience Grade, ready-to-use, steam sterilized

For molecular biology.

100fold stock solution Tris/EDTA.

The most popular solution and storage buffer for DNA can be obtained by diluting 1:100 with sterile water.
The accompanying EDTA inhibits traces of DNAses and therefore protects your valuable nucleic acids from degradation. However, many other enyzmes such as ligases will also be inhibited through the complexation of bivalent cations, therefore TE-buffer should not be used as a solution buffer for cloning.

With original seal.

Good's Buffer Reagents for Application in Molecular Biology

In order to compensate for the low Tris buffering capacity at pH levels below 7,5, Good and colleagues 1966 developed a new reagent group as a buffer for this range: N-substituted amino sulphonic acids[1]. Amino sulphonic acids behave like strong hybrid ions at physiological pH levels (approx. 7,0) and facilitate a large spectrum of molecular biological processes by virtue of their high buffering capacity.
The group of "Good's buffers" also includes sulphonic acids and reagents such as bicine, tricine and AMP with higher pK_a values, thus providing buffer substances for the entire pH range between 5,5 and 11.

[1]Good *et al.* (1966) *Biochemistry* 5:467–477.

S ready-to-use DNAse-free RNAse-free

Water

sterile, ready-to-use, nuclease-free, autoclaved, DEPC-treated water

For molecular biology.

Distilled water mixed with DEPC and steam sterilised. By DEPC Histidin residues in proteins are modified to *N*-carbethoxy histidin, resulting in inhibition of RNases and DNases. DEPC decomposes to CO_2 and ethanol during sterilisation.

Also available as 50 reaction tubes or as 50 glass ampoules with 1 ml each nuclease free water in a tube rack.
To prevent loss of volume in the 1 mltubes (T143.4), we recommend freezing the product at -20°C after receipt.

After autoclaving, each lot is photometrically tested for optimal purity in the wave length range relevant for nucleic acid research.

Decontamination & Purification

ROTI®Nucleic Acid-free

Decontamination solution, Purification solution for surfaces

The ROTI®Nucleic Acid-free products are **not** suitable for the removal of virus contamination.

ready-to-use

ROTI®Nucleic Acid-free

ready-to-use

for removal of nucleic acid contaminations from surfaces

Decontamination solution · Nuclease Removal · Purification solution for surfaces

ROTI®Nucleic Acid-free was specifically designed for extensive removal of nucleic acid contaminations.
Being a mild reagent, ROTI®Nucleic Acid-free may be used on tables, laboratory devices, as well as on glass and plastic wares. By incubation or by wiping, laboratory benches, heating blocks, thermocyclers, pipettor shafts, reaction tubes a.s.o. can easily be cleaned.
Contamination with foreign DNA or RNA, which may heavily interfere with sensitive assays like PCR, reverse transcription or sequencing, is hence efficiently eliminated.

ROTI®Nucleic Acid-free eXtra

ready-to-use

Gentle solution for removal of nucleic acid contaminations from surfaces

Decontamination solution · Purification solution for surfaces

ROTI®Nucleic Acid-free eXtra is a very gently and highly efficient solution that has been designed as nonhazardous alternative to our top-selling ROTI®Nucleic Acid-free.

The ready-to-use solution or spray may be used for fast elimination of all kinds of contaminating nucleic acids (e.g. gDNA, amplicons, plasmids, RNA) from surfaces without the need to handle dangerous liquids. Contamination with foreign DNA or RNA, which may heavily interfere with sensitive assays like PCR, reverse transcription or sequencing, is hence efficiently eliminated.

Application examples

ROTI®Nucleic Acid-free eXtra is suitable for use on a broad variety of materials for instance glass, ceramic, plastic, rubber, high quality steel and precious metal, with the exception of light or non-ferrous metals. By incubation or by wiping, laboratory benches, heating blocks, thermal cyclers, pipettor shafts, reaction tubes etc. can easily be cleaned.
We recommend to test the reagent in an inconspicuous place before using it over a large area.

ready-to-use

RNase AWAY®

ready-to-use

for removal of RNase-contaminations from surfaces

RNase AWAY® allows quick and safe removal of RNases from labware made of plastic or glass, e.g. pipettes, gel chambers, glass discs, etc.

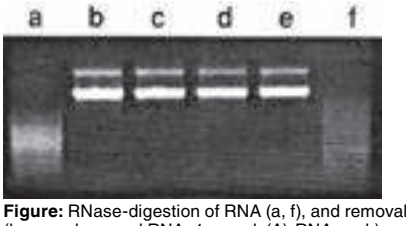

Figure: RNase-digestion of RNA (a, f), and removal of RNase by RNase AWAY® (b–e: undamaged RNA, 1 µg poly(A)-RNA each).

A safe alternative to DEPC. Reduces the use of carcinogenic DEPC in the laboratory considerably. RNase AWAY® does not corrode the surface and is not carcinogenic. Creates and preserves RNase-free surfaces. No mixing, baking or time-consuming waiting. RNase AWAY® is chemically stable and requires no special storing.

Apply RNase AWAY® directly to surface, allow to work in, then rinse with water or dry with an RNase-free tissue cloth. For effective removing of RNases without influencing your DNA samples

PCR

ROTI®Pol DNA Polymerases and Master Mixes

For PCR. Recombinant, heat stable DNA polymerases from the thermophilic bacteria *Thermus aquaticus* or *Pyrococcus furiosus*.

ROTI®Pol, the series of DNA polymerases is the optimal choice for all PCR cycling protocols, as being performed in, for instance, analysis of cloning efficiency, for gene fishing, in routine screening processes, educational assays and much more. In combination with our specially designed buffers, the ROTI®Pol DNA polymerases deliver specific and reproducible PCR amplification with a wide range of PCR templates.

In addition to the **standard Taq** polymerase for PCR assays in general, the range also includes the antibody blocked **hot-start** version of the enzyme, which is recommended for particularly sequence specific approaches. This inhibited Taq polymerase is getting active only after the initial denaturation step, resulting in amplification of the target sequence without production of unwanted side products. Both Taq polymerases are available as **set of enzyme and buffer solutions** as well as premixed, 2x concentrated **master mixes**. The sets contain the DNA polymerase plus two 10x concentrated reaction buffers with $MgCl_2$, one of which has been specially designed for direct gel loading following the PCR reaction. Besides the DNA polymerase, the master mixes include dNTPs, $MgCl_2$, and all other components required for PCR except primers and template DNA, and are available in a colourless version for PCR only, plus a red ready-to-load version for subsequent direct gel electrophoresis.
With the **TaqHY** DNA polymerase we provide a modified Taq polymerase outstanding in robust performance, fast polymerisation rate and high yield of amplicons. Combining the benefits of both techniques, the **Hot-TaqHY** DNA polymerase has been designed by increasing the PCR sequence specificity of a quick and high yield modified Taq polymerase by antibody mediated inhibition.
In combination with the attached specially adjusted high fidelity buffer, the **ProofRead** polymerase delivers highly sequence-true PCR amplicons and is recommended for amplification of target sequences of high GC content, or with complex secondary structures.
All **TaqUltra** DNA polymerase are being tested on absence of DNA (bacterial genomic DNA) which makes them particularly suitable for amplification of bacterial DNA. This polymerase is also available in standard version as well as the hot-start type **Hot-TaqUltra**.

ROTI®Pol DNA polymerases are able to amplify PCR products up to 5 kb with genomic, viral, cDNA and plasmid DNA as template. The Taq DNA polymerases possess a 5' → 3' polymerase- as well as a 5'-flap endonuclease activity, generating amplicons with a 3'dA (adenine)-overhang which may well be used for TA-cloning purposes. In addition to the 5' → 3' polymerase activity, the Pfu DNA polymerase possesses a 3' → 5' (proof reading) exonuclease activity, rapidly substituting misincorporated bases during polymerization. These DNA fragments are blunt-ended.
For easy handling, all solutions are filled in tubes with **colour coded lids**. The red dye for direct gel loading, included in buffers and master mixes, migrates approx. as fast as a 1 kb DNA fragment in 1 % agarose gels.

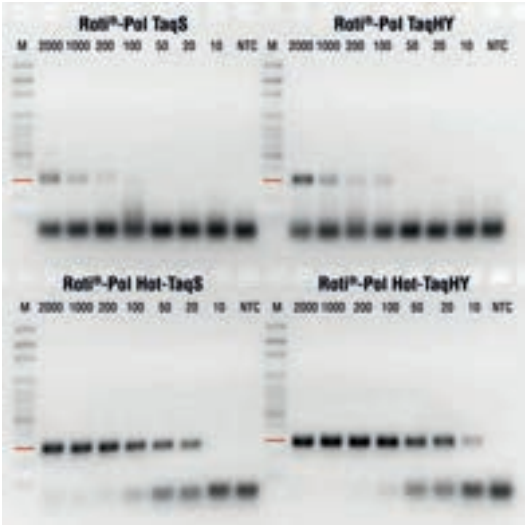

Figure: Sensitivity assay using ROTI®Pol TaqS, TaqHY, Hot-TaqS and Hot-TaqHY, 1 U/reaction each (20 µl). 300 bp β-Actin fragment, 40 cycles.
Template: 10 to 2000 pg human gDNA. Gel loading 10 µl each.
M: 100 bp-DNA Ladder extended. NTC: no template control.

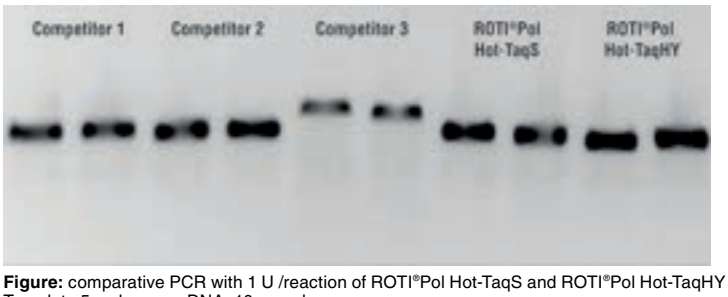

Figure: comparative PCR with 1 U /reaction of ROTI®Pol Hot-TaqS and ROTI®Pol Hot-TaqHY with various competitor Taq polymerases. 1 kb α1-AT fragment, 30 cycles.
Template 5 ng human gDNA, 10 µ per lane.

Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**

Additional costs resulting from such, **will be invoiced** (further information on request).

Please note: In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

Thermal Cycler ³PRIME

Compact, easy-to-handle thermal cyclers for each work bench.

- Licensed for PCR
- New, upgraded generation
- Fast heating and cooling rates
- High temperature homogeneity
- Simple, intuitive programming
- 3.5″ colour touch screen
- USB port
- Cost-efficient
- 4 years or 80.000 cycles warranty on cyclers and blocks

New generation of reliable, inexpensive thermal cyclers specially developed for use on the individual bench, for student's courses and schools.
In order to enable very rapid heating and cooling rates at extremely low temperature variations in the block, an advanced block algorithm has been implemented, regulating the modern Peltier technology. The mono-tube blocks were specially designed to provide optimal contact between the PCR-vials and the block bore hole and are cut, with the most modern of technologies, out of high-grade material. In most ³PRIME instruments, the heated lid can be adjusted to the height of the PCR-vials, thus optimising the temperature and volume constancy in the sample.
Intuitive programming and the newly designed colour touch screen with very easy handling, enable both simple as well as complex cycle protocols to be entered very easily and quickly. All thermal cycler models have 1000 program slots available. With Gradient Thermal Cycler a temperature gradient may be added freely to every temperature step of the program.
Further data may be found online in our detailed product instruction manual or by calling one of our staff on the service hotline.

Purchase of this instrument conveys a limited non-transferable immunity from suit for the purchaser's own internal research and development and applied fields other than human *in vitro* diagnostics under non-real-time thermal cycler patents of Applied Biosystems LLC.

Thermal Cycler PRIME

Versatile, easy-to-handle thermal cyclers for each laboratory.

- Licensed for PCR
- New, upgraded generation
- Fast heating and cooling rates
- High temperature homogeneity
- Simple, intuitive programming
- 5,7″ colour touch screen
- 8 Peltier elements per block
- USB port
- Cost-efficient
- 4 years or 80.000 cycles warranty on cyclers and blocks

New generation of versatile, inexpensive thermal cyclers for use in the laboratory.
In order to enable very rapid heating and cooling rates at extremely low temperature variations in the block, an advanced block algorithm has been implemented, regulating the modern Peltier technology. The mono-tube blocks were specially designed to provide optimal contact between the PCR-vials and can be exchanged in a matter of seconds without the need of tools. The heated lid can be adjusted to the height of the PCR-vials, thus optimising the temperature and volume constancy in the sample.
The modern, intuitive programming, and the newly designed colour touch screen with very easy handling, enable both simple as well as complex cycle protocols to be entered very easily and quickly. All thermal cycler models have 1000 program slots available. With Thermal Cycler Gradient a temperature gradient may be added freely to every temperature step of the program.

Nucleotides

Applicable to

PCR, light-cycling, cDNA synthesis, labelling and primer-extension, mutagenesis-assays, sequencing reactions and *in vitro* transcription.

- Available as ready-to-use set or mix, for contamination-free applications
- Purity ≥98 % (HPLC-tested)
- Tested for “long-run-PCR” of up to 30 kb
- DNAse-, RNAse-, Protease- and Phosphatase-free
- Free of PCR inhibitors like modified bases and tetra-pyrophosphate
- Adjusted to pH 8,5 for superior stability even during larger numbers of freeze-and-thaw cycles
- Also available adjusted to pH 7,0 for special applications (see below)
- Highly efficient enzymatic fabrication
  of dATP, dGTP, dCTP and dUTP. dTTP ist synthesized chemically.

All Carl ROTH nucleotides are manufactured from highest-quality reagents and are most thoroughly tested for quality. This testing procedure not only includes standard-PCR (fig. 1) but also “long-range-PCR” of up to 30 kb, repeated quantitative light-cycling reactions (fig. 2), and tests for physical stability (fig. 3).

► Modified nucleotides for DNA synthesis, see www.carlroth.com

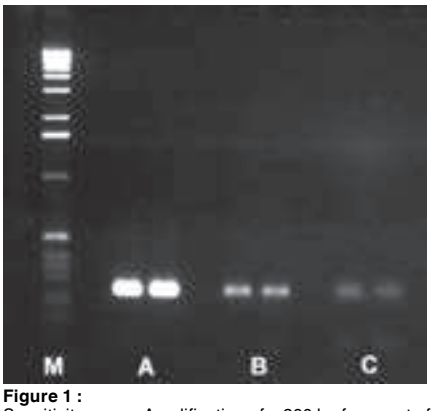

Figure 1 :
Sensitivity assay. Amplification of a 260 bp fragment of human genomic DNA with (left to right) 250 ng (A), 25 ng (B) and 2,5 ng (C) DNA as template (two replicates).

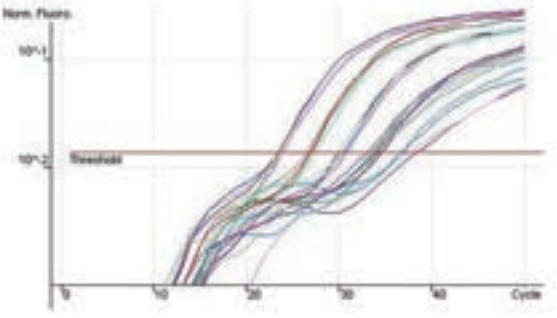

Figure 2:
Sensitivity assay II: Quantitative light-cycling-PCR on recombinant DNA with (left to right) 10 ng, 1 ng, 100 pg, 10 pg, 1 pg DNA as template (six replicates).

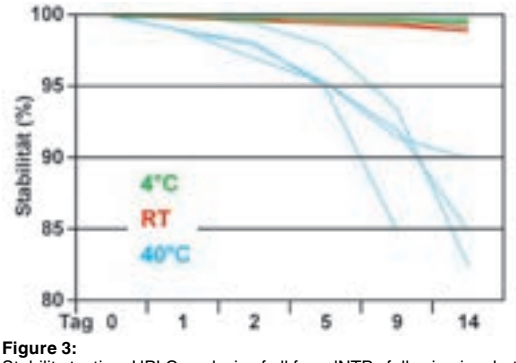

Figure 3:
Stability testing: HPLC analysis of all four dNTPs following incubation periodes of 1–14 days at different temperatures (4 °C – green; room temperature – red; 40 °C – blue). Stability of nucleotides is >99 % even after 14 days incubation at room temperature. Even after an incubation period of 9 days at 40 °C, 85 % of all nucleotide molecules are still intact.

dNTP Sets and dNTP Mixtures

Applicable to
PCR, light-cycling, cDNA synthesis, labelling and primer-extension, mutagenesis-assays, sequencing reactions and *in vitro* transcription. All Carl ROTH nucleotides are produced from high-quality starting reagents and carefully checked for quality. The quality check always includes a “long-run-PCR”, repeated quantitative runs in the light cycler and physical stability tests.

- Available as ready-to-use set or mix, for contamination-free applications
- Can be optimally combined with ROTI®Pol DNA polymerases from Carl ROTH
- Tested for “long range PCR”
- DNAse-, RNAse-, Protease- and Phosphatase-free
- Free of PCR inhibitors like modified bases and tetra-pyrophosphate
- Adjusted to pH 8,5 for superior stability even during larger numbers of freeze-and-thaw cycles
- Also available adjusted to pH 7,0 for special applications
- Highly efficient enzymatic fabrication of dATP, dGTP, dCTP and dUTP. dTTP ist synthesized chemically.

Storage temperature: –20 °C
Transport temperature: cooled (freezer packs)

Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**

Additional costs resulting from such, **will be invoiced** (further information on request).

Please note: In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

Labelled dNTPs

- Ultra pure
- Stabile
- pH 7.5
- Tested for the lack of endo- and exonucleases, ribonucleases, and phosphatases

Applications:
Non-radioactive labelling of DNA via enzymatic reactions like e.g. PCR, reverse transcription, nick-end-translation, end-labelling, or random-priming. Can be incorporated by all standard DNA-polymerases (Taq-polymerase, T4 DNA-polymerase, Klenow fragment and so on).

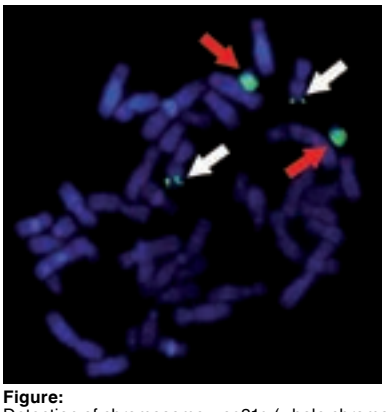

Figure:
Detection of chromosome wcp21q (whole chromosome paint, red arrows) and band 11q23 (BAC, bacterial artificial chromosome, white arrows) by FISH, labelling with fluorescein-12-dUTP.
With kind permission of PD Dr. Thomas Liehr, Institute of Human Genetics and Anthropology, Friedrich-Schiller University, Jena.

ready-to-use | DNAse-free | RNAse-free | PCR inhibitor-free | Protease-free

Rhodamine-12-dUTP

≥95 %, 1 mM solution

For non-radioactive, enzymatic labelling of DNA.

Rhodamine-12-dUTP is able to replace dTTP in growing DNA-strands and is used for efficient non-radioactive DNA-labelling. Detection of labelled nucleic acids can easily be done by direct analysis of fluorescent signals (e. g. by fluorescence microscopy).
Rhodamine-12-dUTP can also be used for double staining techniques in combination with fluorescein-12-dUTP or biotin-11-dUTP and corresponding antibodies or streptavidin-complexes, respectively.

Excitation: 505 nm
Emission: 530 nm (red)

Application examples

Non-radioactive labelling of DNA by enzymatic reactions, e.g. PCR, reverse transcription, nick-end-translation, end-labelling or random-primed DNA-labelling. Incorporation can be done with all established DNA-polymerases (e.g. Taq-polymerase, T4 DNA-polymerase, Klenow fragment).
Tested for the lack of endo-, exodeoxyribonuclease, ribonuclease and phosphatase.

Reagents for PCR

NEW / + | ready-to-use | DNA-free | DNAse-free | RNAse-free | Protease-free

Magnesium chloride solution

25 mM, for PCR, for molecular biology

For optimisation of PCR reaction conditions.
In a PCR reaction, cofactors such as divalent cations ($MgCl_2$) are needed for an optimal process. Magnesium interacts with the DNA template, dNTPs and the polymerase in a PCR reaction. The $MgCl_2$ concentration influences the productivity and accuracy of the polymerase. It also influences the binding of the primers to the template.

Application:

- Too high magnesium concentration can lead to reduced specificity and undesired PCR products
- Too low a magnesium concentration can lead to no PCR product at all
- Magnesium influences the melting point of double-stranded DNA

$MgCl_2$ · M 95,22 g/mol

PCR water

for molecular biology, sterile, ready-to-use

Ultrapure water, free of nucleases, DNA and RNA for use in sensitive molecular biological applications.

PCR water is ultrapure water that is proven to be free of nucleases, DNA and RNA. The difference to the quality of distilled or demineralised water can be seen in the electrical conductivity of ≤0.075 µS/cm. Since the water molecule is an ampholyte that can react with itself, even ultrapure water has a low electrical conductivity.

PCR water is suitable for use in sensitive molecular biology applications such as PCR, RT-PCR, cDNA synthesis or sequencing.

Each batch is tested by PCR to exclude contamination by DNA and nucleases.

H_2O · M 18,02 g/mol

HP25.1	1 set	40 tubes	box	246,20

1 OD DNA is defined as the amount of DNA recieved by lyophilisation of 1 ml solution containing DNA-concentrations of 1 OD.

ROTH poly d(T)$_{12-18}$ Primer

HPLC-purified, lyophilized

For sequence unspecific priming during reverse transcription.

Delivery includes 5 x 1 OD_{260} units (31.2 µg or 7.3 nmol DNA each) poly d(T)$_{12-18}$ Primer in one vial each and 1 ml DEPC-treated water for molecular biology (DNAse-free, RNAse-free).

- Superior purity
- Standardised quality
- Immediately available

Mix of d(T) 12 to 18mers.
5 OD_{260} units.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Art. No.	Pack Qty.	Packaging	Pack.	€
HP27.1	1 set	5 tubes, 1 OD each	plastic	64,40

ROTH Hexanucleotide Random-Primer Mix

HPLC-purified, lyophilized

For random priming during probe generation or during total genome-amplification.

Delivery includes 10 x 1 OD_{260} units (27.4 µg or 15.3 nmol DNA each) of hexanucleotide mixture in one vial each and 1 ml DEPC-treated water for molecularbiology (DNAse-free, RNAse-free).

- Superior purity
- Standardised quality
- Immediately available

N_6 mix (N for A, G, C, T).
10 OD_{260} units.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Art. No.	Pack Qty.	Packaging	Pack.	€
HP28.1	1 set	10 tubes, 1 OD each	plastic	87,65

ROTI®Fair Reagents

Highly pure reagents and buffer mixes in pouches or as tablets.

A tablet or the contents of a sachet is simply dissolved in the appropriate amount of water – and the desired solution is ready. By adjusting the amount of water, the concentration can easily be varied and a higher concentrated stock solution, for example, can be prepared.

- **Easy to use** – simply dissolve the contents of a bag or tablet in water.
- **Time saving** – no need to weigh reagents or adjust pH.
- **Practical** – dry reagents for direct use eliminate the need to prepare stock solutions that have been stored for long periods.
- **Reliable** – our stringent quality control ensures high batch consistency.

ROTI®Fair

Product name	Buffer/solution	Use	Batch quantity	End concentration	pH value	Art. No.	Pack Qty.	€

For additional product data and safety information, see chapter Chemicals A–Z.

Biological Buffer Reagents

PUFFERAN® – for biochemistry, bioinorganic chemistry and molecular genetics
CELLPURE® – especially for cell culture

- Very high purity
- Dissolve easily in water and aqueous media
- No penetration or dissolution of membranes
- Low UV absorption
- No or only very weak complexing with cations
- Chemically stable
- No inhibition or activation of biological or biochemical reactions
- Minimal alteration of pH-value by temperature changes

Application Range of Biological Buffer Reagents

Buffer reagents (alphabetical))	pH range	pK_a (25 °C)
ACES	6,1–7,5	6,78

Biological Buffers

Detergents

The dissolving power of detergents is utilised to deal with a number of molecular-biological and biochemical problems.

Brij® 35

for biochemistry

Non-ionic detergent.

Copolymer and non-ionoic detergent with polyoxyethylen group. Highly resistant against acids and bases. Particularly suited for emulgation of fats at high or low pH values. Also well suited for protein analysis, since Brij® 35 does neither denature nor dissociate proteins.

Application: 0.5 % solution: Dissolve 0.5 g Brij® 35 in 100 ml hot water. Tip: In case some detergent precipitates during cooling, dilute to 150 ml (0.34 % solution) and use 1.5 vol. in the assay.

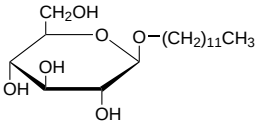
Digitonin

Ultra Quality

Water soluble quality, for biochemistry. Non-ionic detergent.

Steroid glycoside and non–onic detergent with high binding capacity for cholesterol. Digitonin is used for permeabilisation of plasma membranes as well as for mild solubilisation of membrane–bound proteins.



Application: Use 10–100 µg/ml for selective permeabilisation of plasma membranes via binding of cholesterol (Mooney, R.A. (1988). *Methods Enzymol.* 159:193–2).

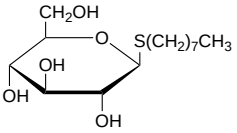
n-Octyl-β-D-glucopyranoside (OGP)

≥98 %, for biochemistry

Non-ionic detergent.



Non–ionic, non–denaturing, water–soluble detergent, mainly used for isolation of membrane proteins. Easily removable by dialysis. No photometric absorption at 280 nm.
Recommended working solution: 30 mM.
Always prepare working solutions freshly.

$C_{14}H_{28}O_6$ · M 292,38 g/mol

S ready-to-use

ROTI®Stock 20 % SDS

20 % SDS, BioScience Grade, ready-to-use, sterile filtered

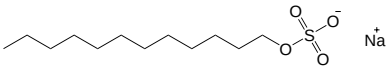
For molecular biology and electrophoresis.

20 % stock solution sodium dodecyl sulphate.

Store the solution away from light in a dry place. SDS stock solution and other solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.

With original seal.

WGK 2



Danger H315-H318-H335

20 % SDS in deionised water, 0.2 µm filtered.
Remark: Contains SDS. Can be redissolved by heating (max. 45 °C).

Bromelain

~1200 GDU/g, for biochemistry

Made from stems of young pineapple *(Bromeliaceae)*.

Highly active thiol proteinase (non-specific cystein protease), glycoprotein. Enzyme from *Bromeliaceae*, used in biochemistry and for meat tenderising. Preferable digestion at lysin, alanin, tyrosin and glycin. Degrades hemoglobin, gluten, collagen, globulin, casein and gelatin at pH 4-9. Cream-coloured, hygroscopic powder.
Bromelain is activated by cystein, bisufite salts, NaCN, Na_2S, H_2S and benzoate. The definite pH optimum depends on substrate and reaction parameters. pH stability of bromelain increases drastically after binding to the substrate.

Unit definition

One GDU (gelatin digestion unit) will hydrolyse 1.0 mg of amino nitrogen from gelatin in 20 minutes at pH 4.5 at 45 °C. One bromelain tyrosine unit (BTU) corresponds to 1.1 GDU. 1200 GDU/g correspond to approx. 2.4 FIP-units/mg.

Directions for use

Working concentration: substrate dependent.
pH working range: 4.0–8.0, pH optimum: 5–6, stabile at pH 3.0–6.5
Temperature optimum: 50–65 °C
Inhibitors: Hg^{2+}, Ag^{+}, Cu^{2+}, antitrypsin, estatin, iodacetate, TLCK, TPCK, and temperatures of over 70 °C

Stock solution: 10 mg/ml in H_2O. Unsoluble in organic solvents (acetone, ethanol, methanol etc.)

Storage temperature: +4 °C

Lipoxygenase

≥100 000 U/mg, for biochemistry

Made from soybeans. For oxidation of arachidonic acid.

Lipoxygenase stereo-specifically catalyses the oxidation of arachidonic acid, initiating the formation of leukotrienes in eicosanoid metabolism.

Unit definition

One unit will cause an increase in absorption (234 nm) of 0.001 per minute at 25 °C and pH 9 by oxidation of linoleic acid.

Directions for use

Well soluble in H_2O or buffer.
Recommended storage of stock solution in aliquots at –20 °C.

M ~108 000 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

Lysozyme

≥45 000 FIP U/mg, lyophilized

From chicken egg white, free from albumin.

Salt and albumin free lyophilised powder. Quality product for molecular biology. Ideal for lysis of bacteria for preparing DNA.

Lysozyme preferentially hydrolyses the β-1,4-glycosidic bond between N-acetylmuraminic acid and N-acetylglucosamine. Muramic acid and acetylglucosamine are components of the proteoglycan cell wall of many microorganisms. The enzyme is mostly derived from chicken egg white and may efficiently be used for lysis of Gram+ bacteria. In genetic engineering, it is very often used during isolation of plasmid DNA or cellular RNA for the lysis of *E. coli* or eukaryotic cells.

Unit definition

1 FIP-Unit equals the amount of enzyme which reduces the absorbance by 0.001 per min. at 450 nm, 25 °C, pH 7.00 using a suspension of FIP *Micrococcus luteus* as substrate (acc. to *Pharmaceutical Enzymes* 1997). 1 FIP-Unit resembles approximately 1 Shugar-Unit.

Directions for use

Working solution: 5-10 mg/ml (bacteria), 1-2 mg/ml (eukaryotic cells)
Buffer: salt solution without detegents (0.1 M potassium phosphate buffer, 50 mM Tris buffer, 1x PBS, 1x TBS or similar)
pH optimum: 6.0-7.0
Inhibitors: imidazole, indole, N-acetyl glucosamine
Temperature optimum: 37 °C
Stability: The lyophilisate is stable at +4 °C and -20 °C for several years. The stability of the solution at pH 4-5 is several weeks at +4 °C and several days at room temperature.
Isoelectric point: approx. 11
Lysozyme solution should be frozen only once.

Stock solution: 10–50 mg/ml in 10 mM Tris (pH 8,0), prepare directly before use

M ~14000 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

Papain

>30 000 USP-U/mg, for biochemistry

Made from *Carica papaya*.

A non-specific endopeptidase from Papaya latex. Has a very wide substrate range and cleaves proteins more efficiently than trypsin, for example. Is capable of not only hydrolysing peptide bonds, but also acts effectively as an esterase and thiol-esterase.

Unit definition

30.000 USP (Casein) Units is approx. 2 FIP-Units (BAEE-Units). One USP Unit of Papain activity releases the equivalent of 1 µg tyrosine form a specified casein substrate under assay conditions specified by the USP.

Directions for use

Working concentration: Dilution immediately before application in a buffer with approx. 5 mM L-Cysteine
pH optimum: 6.0
Temperature optimum: 65 °C
Activation and stabilization: EDTA, Cysteine and Dimercaptopropanol. DTT may be added in orderto increase activity.

Stock solution: 10 mg/ml in water

Storage temperature: +4 °C

Pepsin

≥2 000 FIP-U/g, for biochemistry

From porcine gastric mucosa. For detection of trichina in meat.

Acidic endopeptidase, the inactive precursor of which, pepsinogen, is produced in the stomach mucosa. Pepsin cleaves proteins preferentially at carboxylic groups of aromatic amino acids such as phenylalanine and tyrosine. Highly active pepsine is preferably used for detection of trichina in pre-digested muscle meat of animals.

Unit definition

1 FIP unit (≈ Ph. Eur. unit) of Pepsin activity will, during incubation at 25 ±0.1 °C for one minute, cause decomposition of haemoglobin to an extent comparable with the colour caused by reaction of 1 micromole of tyrosine with the same dye. 2 000 FIP-Units correspond to 1: 10 000 NF-U and 1: 12 500 BP-U.

Directions for use

Irreversible inactivated in alkaline medium.
Solution is stable in temperatures of up to 60 °C, and also in higher concentrations of urea and guanidine.
pH optimum: 1–2.
Isoelectric point: 1.0

Well soluble in water, stable in aqueous solutions of pH up to 5.5, unstable above pH 6.0

► Polymerases see chapter Molecular Biology page 149

Enzyme: a neoclassical, Greek artificial word ενζυμου, *énzymon*, derived from εν-, en- (in-) and ζυμη, *zýmé* (yeast, sourdough, archaic)
Ferments: comes from the Latin *fermentum* (ferments, sourdough)

There are six **classes** in which all enzymes are classified according to the particular reaction they catalyse:

- *Oxidoreductases* (catalyse redox reactions)
- *Transferases* (transfer functional groups among substrates)
- *Hydrolases* (cleave bonds via addition of water)
- *Lyases/Synthases* (cleave or synthesise complex products out of basic substrates without cleavage of ATP)
- *Isomerases* (transform chemical isomers)
- *Ligases/Synthetases* (cleave or synthesise complex products out of basic substrates via cleavage of ATP)

Proteinase K

Endopeptidase

Proteinase K (from *Tritirachium album*) is a non-specific protease of the serine protease family.
Proteinase K is used for the cleavage of proteins in nucleic acid preparations. It is mainly used in nucleic acid purification or for the removal of nucleases.
Proteinase K is active under a wide range of reaction conditions, including elevated temperatures and presence of SDS.

Directions for use

Activity: (Haemoglobin, pH 7.5; 25 °C) 30 mAnson-U/mg
Foreign activity: RNAse and DNAse not detectable
Optimum temperature: +65 °C.
Activity at +65 °C is ca. 12 x higher than at +25 °C. Over +65 °C, inactivation due to denaturation.
Activators: Denaturating agents like SDS (0,5-1 %), urea.
Inhibitors: Inhibition with Hg^{2+}-ions, DFP, PMSF and phenol. Not inhibited by EDTA, sulfhydryl reagents and trypsin or chymotryps ininhibitors.
Stability: pH 4.0-12.5. pH optimum: 8,0.
Also stable even when denaturing agents, e.g. SDS and urea are present.
Stabilisers: Ca^{2+}-ions (1-5 mM) prevent autolysis.

DNAse-free RNAse-free

Proteinase K

≥30 mAnson U/mg, lyophilized

Non-specific protease for degrading proteins in biological samples. Isolated from fungi (*Tritirachium album)*.

A non-specific endopeptidase with strong proteolytic activity for degrading proteins in biological samples. A quality product for molecular biology with a broad scope of application.

Directions for use

Working solution: 50 µg/ml
Reaction buffer: 50 mM Tris-HCl; pH 7.5; 5 mM $CaCl_2$; 0.5 % SDS

Stock solution: 20 mg/ml in water. Storage temperature (stock solution): -20 °C.
Art. No. 7528.3: A The stock solution (20 mg/ml) can be prepared directly in the bottle.

Storage temperature: +4 °C

Trypsin

A pancreatic serine protease with a specificity for peptide bonds between basic amino acids arginine or lysine and another non-specific amino acid.
Trypsin is frequently used to suspend cells which grow as monolayers on surfaces. Longer exposure to trypsin can damage cells, so that an inhibitor (serum or trypsin inhibitor from soya beans) should be added upon completion.

Unit definition

One USP Unit will cause an increase in absorption (253 nm) per minute of 0.003 at 25 °C and pH 7.6 using BAEE as substrate.
One (international) Unit (U, 255 nm, BAEE, pH 8) is approx. 90 USP U.
One TAME Unit is approx. 20 USP Units.
One NF Unit is one USP Unit.
Ten „BAEE Units“ are approx. 3.3 USP Units.

Directions for use

pH optimum 7.2-8.5

TSE-/BSE-free

Urease

Hydrolase belonging to the Amidases. Metallo-enzyme. Urease hydrolasis urea, resulting in ammonia and carbon dioxide, or in ammonia- and carbonate ions, respectively. The molecule isolated from Jack beans is composed of 6 subunits of approx. 91 kDa each with an overall size of approx. 544 kDa. Nickel is the cofactor.
Using high amounts of urea as substrate (200 mM), urease is applied for visualisation of the connection between reaction rate and time. Detection is carried out via measurement of conductivity, or, photometrically, via colour change of bromothymol blue. Furthermore, model system for catalytic activation of carbon dioxide in metallo-organic chemistry.

Directions for use

pH optimum: 7.4.
Recommended reaction buffer system is 40 mM potassium phosphate buffer, pH 7.4. Heavy metals (e. g. lead) are inhibitory.

Urease

≥220 Nessler U/mg material

From jack beans, freeze-dried

Unit definition

One unit (U) is defined as the amount of enzyme that catalyzes the liberation of 1 µmole of NH_3 per min at pH 7.0 and 25 °C.

Packaging: 0,25 Mega Unit

M ~480000 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

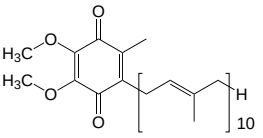
► Zymolyase® see page 137

Coenzymes

Adenosin-5'-triphosphate disodium salt (ATP)

≥98 %, for biochemistry



Coenzyme of kinases.

Discovered in 1929 by Karl Lohmann. Main molecular currency of energy in all cells and highly important regulator of energy providing processes. During hydrolysis of phospho-anhydride bonds, energy of 30.5 kJ/mol (ADP) or 45.6 kJ/Mol (AMP), respectively, is released. Ligand of purinergic receptors and intercellular signalling molecule. Additionally, ATP is coenzyme of phosphate-transferring kinases like proteine kinases A, proteine kinases C, calmodulin-dependent kinases, and substrate of adenylate cyclases, which synthesize the second-messenger molecule cAMP.

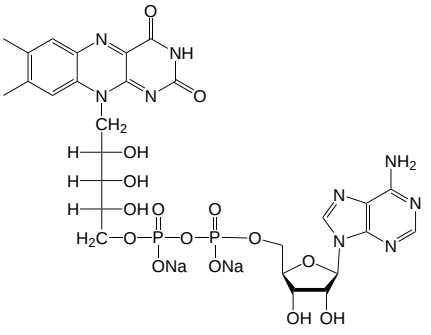
Coenzyme Q 10



≥98 %, for biochemistry

Ubiquinones represent a vital component in electron transport of the mitochondrial respiratory chain (hydrogen, electron and oxygen carriers). They, therefore, are almost ubiquitously distributed through the species, with the only exclusion of gram positive bacteria and cyanobacteria. Coenzyme Q functions as electron carrier between flavoproteins and cytochrome molecules of the respiratory chain. Well soluble in organic solvents (e. g. acetone, diethyl ether, chloroform) and fats. Virtually insoluble in water.

Inhibitors

Enzyme inhibitors are molecules that bind to enzymes and decrease their activity. The classification of inhibitors, which can stem from various substance classes, results from the type of inhibition (reversible with subclasses, or irreversible) or the target molecule (e. g. serine protease inhibitors). Generally, for inhibition of specific proteins in biochemical assays single specific inhibitors are used, while a suitable inhibitor cocktail is recommended for work on protein mixtures such as cellular or tissue extracts. At Carl ROTH you will find both inhibitor cocktails for all common extracts, as well as the most important individual inhibitors.

The Mechanisms of Enzyme Inhibition

Depending on the binding of the inhibitor, you may find both *reversible* and *irreversible inhibition*.

In **reversible enzyme inhibition** the inhibitor doesn't bind closely to the enzyme and can be separated or displaced in succession. It lowers its activity and/or the speed constant of the reaction of the substrate to the product. It also establishes a balance between the enzyme-inhibitor complexes with or without substrate. Metabolic processes are typical examples of this, which, depending on the physiological state of the cells, either are enhanced or inhibited.
Competitive inhibitors are reagents which compete with substrate (A) for the binding site in the enzyme's active center and increase the Michaelis Menten constant of the enzyme. They are either extremely similar to the substrate (but are not converted and can be displaced again by the substrate) or even represent a second substrate and thereby competitively inhibit the conversion of substrate A.
In *non-competitive inhibition* the inhibitor does not bind in the active center but through binding, it changes the enzyme's tertiary structure to such an extent that a product can no longer be produced/set free.
Uncompetitive inhibition is a special case where the inhibitor can only interact with the enzyme-substrate complex and it changes both the MM-constant as well as the maximum reaction speed.
In *partial-competitive inhibition*, binding of the inhibitor lowers the affinity of the enzyme to the substrate without influencing the speed constants.

In **irreversible inhibition**, the inhibitor binds so closely that it can no longer be separated from the enzyme and thus the activity of the enzyme is permanently reduced or destroyed. Typical examples of this are protein-synthesis inhibitive antibiotics or "suicide substrates" which bind covalently to the active center.

Inhibitor Cocktail Standard

for biochemistry

General cocktail of protease inhibitors.

Inhibitor cocktail for inhibition of standard proteases. Inhibits serine proteases, metalloproteases, cysteine proteases, trypsin-like proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition during standard extraction without presence of special proteases, or as basic solution for supplementation with own inhibitors.

Directions for use

Well water-soluble. The premixed powder may easily be reconstituted in 100 ml distilled water or extraction buffer to form a 1x inhibitor solution.

End concentrations in 1x solution are:
AEBSF: 1.67 mM
EDTA: 13.44 mM
Leupeptin: 2.1 µM
Pepstatin A: 1.46 µMM

Storage of inhibitor solution: 4 °C max. 90 days.
Do not freeze!

For 100 ml 1x solution.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Inhibitor Cocktail BroadRange

for biochemistry

Broad range cocktail of protease inhibitors.

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, esterases, metalloproteases, cysteine proteases, and trypsin-like proteases.
Recommended as cocktail for protease inhibition during tissue extraction.

Directions for use

Well water-soluble. The premixed powder may easily be reconstituted in 1 ml distilled water to form a approx. 100x inhibitor stock-solution.

Concentrations in stock-solution are:
AEBSF: 50 mM
Aprotinin: 15 µM
E-64: 100 µM
EDTA: 50 mM
Leupeptin: 100 µM

Storage of aliquoted inhibitor solution: –20 °C max. 1 month.

1 vial is sufficient for inhibition of proteases from 1–2 g material.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Protease Inhibitor Cocktails
Overview and recommendations for application

Inhibitor Cocktail Tissue

for biochemistry, EDTA free

Cocktail of protease inhibitors for extracts of mammalian cells or tissue. Without EDTA.

Inhibitor cocktail. Inhibits serine proteases, esterases, cysteine proteases, and trypsin-like proteases.
Recommended as cocktail for protease inhibition particularly in extracts from mammalian cells or tissue.

Directions for use

Well water-soluble and hygroscopic. The premixed powder may easily be reconstituted in 1 ml distilled water to form an inhibitor stock-solution.

Recommended dilution is 1:100. End concentration for the respective extract has to be optimized.

Concentrations in stock-solution are:
AEBSF: 50 mM
Aprotinin: 15 µM
E-64: 100 µM
Leupeptin: 100 µM

Storage of aliquoted inhibitor solution: –20 °C max. 6 months.

1 vial is sufficient for inhibition of proteases from approx. 2 g cells or tissue.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Inhibitor Cocktail Bacteria

for biochemistry

Broad range cocktail of protease inhibitors for extracts from bacteria.

Inhibitor cocktail for inhibition of standard proteases. Inhibits serine proteases, aminopeptidase B, leucine-aminopeptidases, metallo-proteases, cysteine proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition in extracts from bacteria.

Directions for use

Well soluble in DMSO and hygroscopic. The premixed powder (Art. No. 3947) may easily be reconstituted in 1 ml DMSO and may then be diluted with 4 ml distilled water to form a slightly opaque inhibitor stock-solution.

Recommended dilution approx. 1:40.

Concentrations in stock-solution are:
AEBSF: 20 mM
Bestatin: 1.7 mM
E-64: 200 µM
EDTA: 85 mM
Pepstatin A: 2 mM

The kit contains

DMSO (1 ml) for reconstitution of the lyophilized inhibitor mix is included (Art. No. 3949).
Contents of this Kit may not be bought separately.

Storage of aliquoted inhibitor solution: –20 °C max. 6 months.

1 vial is sufficient for inhibition of proteases from approx. 20 g *E. coli.*

Storage temperature: –20 °C
Transport temperature: ambient temp.

ready-to-use

Inhibitor Cocktail Plus

ready-to-use, for biochemistry, EDTA free

Broad range cocktail of protease inhibitors for extracts of mammalian cells or tissue. Without EDTA.

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, esterases, aminopeptidase B, leucine-amino-peptidases, cysteine proteases, trypsin-like proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition particularly in extracts from mammalian cells or tissue.

Provided as stock-solution in DMSO.

Directions for use

Concentrations per vial are:
AEBSF: 100 mM
Aprotinin: 80 µM
Bestatin: 5 mM
E-64: 1.5 mM
Leupeptin: 2 mM
Pepstatin A: 1 mM

Storage of inhibitor solution: –20 °C max. 6 months.

1 ml is sufficient for inhibition of proteases from approx. 20 g cells or tissue.

ready-to-use

Inhibitor Cocktail His-tag

ready-to-use, for biochemistry, EDTA free

Broad range cocktail of protease inhibitors for extraction of His-tagged proteins. Without EDTA.

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, aminopeptidase B, leucine-aminopeptidases, cysteine proteases, aspartic proteases, and metalloendopeptidases.
Recommended as cocktail for protease inhibition particularly for extraction of His-tagged proteins from bacterial extracts. EDTA-free to allow optimal Ni^{++}- or Co^{++}-his binding in affinity chromatography.

Directions for use

Recommended dilution approx. 1:100.
Provided as stock-solution in DMSO.

Concentrations per vial are:
AEBSF: 100 mM
Bestatin: 5 mM
-64: 1.5 mM
Pepstatin A: 0.2 mM
Phosphoamidon: 2 mM

Storage of inhibitor solution: –20 °C max. 6 months.

1 ml is sufficient for inhibition of proteases from 10 g bacterial cells.

Storage temperature: –20 °C
Transport temperature: cooled

Individual Inhibitors

► Structural formulae see chapter Chemicals A-Z

AEBSF hydrochloride

≥98 %, for biochemistry

Inhibitor of serine proteases

Irreversible inhibition. Inhibits trypsin, chymotrypsin, plasmin, kallikrein and thrombin by sulphurizing a functional group in the active centre of an enzyme. Due to its low toxicity, AEBSF is a good alternative to PMSF.

Directions for use

Working concentration: 0.1–5 mM.
Optimal at pH 6.5, alkali-labile. Avoid pH-value 7 and do not exceed pH-value 9.

Easily water-soluble, resulting in an acidic pH-value.
Stock solution: 5–50 mg/ml (20–200 mM) in H_2O.
Storage of stock solution: at –20 °C max. 6 months

$C_8H_{10}FNO_2S \cdot HCl \cdot M$ 239,69 g/mol

Storage temperature: –20 °C

Antipain dihydrochloride

≥30 U/mg, for biochemistry

Serine/cysteine protease inhibitor and in general of proteases similar to trypsin.
Isolated from *Streptomyces.*

Antipain was isolated from streptomycin (actinomycetes). Reversible inhibition of papain (derivation of the name: anti-papain), trypsin, cathepsin A, B, D, plasmin, chymotrypsin, pepsin and calpain I.

Antipain has a similar spectrum of activity to leupeptin.

Directions for use

Working concentration: 10–50 µg/ml (15–75 µM).

Stock solution: 50 mg/ml (75 mM) in H_2O, DMSO or ethanol. Storage of stock solution: at –20 °C max. 1 month.

Aprotinin

3,0 PEU/mg, for biochemistry

Inhibitor for inhibition of serin proteases, lyophilized and made of beef lung.

Aprotinin inhibits trypsin, chymotrypsin, plasmin and kallikrein with high activity.

Kininogens are cysteine proteases from the cystatin superfamily. Kininogenases split kininogens into kinins (inflammation mediators).

Unit definition

Activity: 1 PEU (Ph. Eur. Unit) corresponds to 1950 KIU (Kallikrein Inhibitory Units). 1 PEU corresponds to approx. 1.5 TIU (Trypsin Inhibitory Units). 1 TIU corresponds to approx. 1300 KIU.
Specific Activity: ≥3.0 PEU/mg corresponding to ≥5850 KIU/mg

Directions for use

Recommended end concentration: 1.54 µM (10 µg/ml).
pH-optimum: 7.0-8.0.

Dissolves easily in water. Stock solution: 1.54 mM (10 mg/ml) in H_2O or buffer. Storage of stock solution: in aliquots at –20 °C.

M 6500 g/mol

E-64

≥99 %, for biochemistry

Inhibitor of cysteine proteases.

Irreversible, strong and highly selective inhibition of cysteine protease (e. g. papain, bromelain, ficin, cathepsin B, H and L, tumor-cathepsin, calpain etc.). Does not inhibit serine proteases except trypsin.

Low toxicity, high cell permeability and stability against reducing reagents makes E-64 an excellent alternative to leupeptin or antipain.

Directions for use

Working concentration: 1–10 µM.

Stock solution: 1 mM (360 µg/ml) in H_2O, DMSO or ethanol. Storage of stock solution: at –20 °C max. 3 months.

$C_{15}H_{27}N_5O_5 \cdot 0{,}5\ H_2O$ · M 357,41 g/mol

► EDTA and EGTA see chapter Chemicals A-Z

Geldanamycin

≥98 %, for biochemistry

HSP90 inhibitor, tyrosine kinase inhibitor. Benzoquinone ansamycin antibiotic.

Geldanamycin arrests cells in G_2 phase, thus interfering with angiogenesis and oncogenesis. The specific binding of geldanamycin to heat shock protein 90 (HSP90) and its ER homologue GP96 leads to inhibition of the chaperone, results in degradation of HSP90 substrates and, subsequently, to deregulation of central cell mechanisms – cell cycle, cell proliferation, apoptosis/cell vitality.

Due to its antitumor potential it may be used as antibiotic against several eucaryotic carcinogenic cell lines. Additionally, geldanamycin is used as inhibitor of tyrosin-kinase and during analysis of several other physiological regulatory mechanisms.

Directions for use

Working concentration: 1–10 µg/ml.
Photo sensitive! Store protected from light.

Stock solution: 1000x in DMSO or methanol. Storage of stock solution at –20 °C, max. 2 weeks at 4 °C.
Photo sensitive! Store protected from light.

Genistein

≥98 %, for biochemistry

Inhibitor of tyrosine specific protein kinases.

Competitive inhibitor of ATP binding to the catalytic domain of tyrosin kinases. Exceptional are the insulin receptor tyrosin kinase and the serin-/threonin specific proteases, which will not be inhibited by genistein. An additional, tyrosin kinase independent, effect of genistein is the inhibition of topoisomerases I and II.

Directions for use

Working concentration: 10–100 µM

Stock solution: 100 mg/ml (370 mM) in DMSO. Storage of stock solution: +4 °C or –20 °C.

► Phosphatase inhibitor glycerophosphate disodium pentahydrate see chapter Chemicals A-Z

Leupeptin hemisulphate

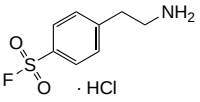
≥96,5 %, for biochemistry

Reversible inhibitor of serine- and cysteine proteases.

Leupeptin competitively inhibits calpain, cathepsin B, kallikrein, papain, plasmin and trypsin. Inhibition of thrombin is controversely discussed. Little or non-inhibiting for pepsin, cathepsin A and D and chymotrypsin.

Directions for use

Working concentration: 0.5–50 µg/ml (1–100 µM). Working solutions are stabile only for few hours.
Due to its aldehyde groups, leupeptin may interfere with protein detection assays (e.g. Bradford).



Stock solution: 5 mg/ml (10 mM) in H_2O, ethanol, acetic acid and DMF. Stock solution is stabile at +4 °C for approx. 7 days. Recommended storage of stock solution at –20 °C (6 months).

► HSP90 Inhibitor Novobiocin sodium salt see page 369

Pefabloc® SC-Protease Inhibitor

Pefabloc® ≥95 %, for biochemistry

Irreversible inhibitor of serine proteases.

Broadband inhibitor for serine proteases. Reacts covalently with the serin of the active center. Alternative to PMSF and DFP with a great number of advantages to standard inhibitors.

- Extremely low toxicity (LD_{50} >2800 mg/kg)
- Stability in neutral range
- High solubility in aqueous buffers
- Wide spectrum of specifity for serin protease
- Minimal reaction to cell growth

Directions for use

Working concentration: 1–5 mM.
Pefabloc® reacts with thiols. DTT and β-mercaptoethanol reduce the inhibitory effect.

Stock solution 5–50 mg/ml in H_2O; stable with neutral pH.

$C_8H_{10}NSO_2F \cdot HCl$ · M 239,7 g/mol

Storage temperature: +4 °C

Pepstatin A

≥98 %, for biochemistry

Inhibitor of acidic / aspartic proteases

Isolated from streptomoycin and other actinomycetes.

Strong, highly selective inhibition. Inhibits pepsin, renin, cathepsin D, chymosin, protease B and also retroviral proteases. No inhibitive effect on thiolproteases, neutral proteases and serine proteases.
Hardly toxic.

Directions for use

Working concentration: 0.5–1 µM.
It may be necessary to add 10-50 % acetic acid to completely dissolve pepstatin A.

Stock solution: 1 mM (685 µg/ml) in DMSO or methanol.
Storage of stock solution: at –20 °C max. 1 month, at +4 °C max. 1 week.

$C_{34}H_{63}N_5O_9$ · M 685,91 g/mol

Storage temperature: –20 °C
Transport temperature: ambient temp.

2936.2	25 mg	plastic	120,95
2936.3	100 mg	plastic	392,40

Phenylmethyl sulphonyl fluoride

≥98 %, for biochemistry

Irreversible inhibitor of serine- and thiol proteases. Reversible effect on cysteine proteases.

General, irreversible inhibitor of serin proteases (chymotrypsin, trypsin and thrombin) and for the dystin-protease papain. Inhibiton by sulphonation of the serine localised in the enzymatic active site.

Reversible inhibitor of cysteine-proteases. K_i = 0.91 ±0.01 mM

Directions for use

Working concentration: 17–174 µg/ml (0,1–1 mM).
Dissolves easily in isopropanol, ethanol and methanol. Not stable in aqueous solutions (half-life value of 1 h at pH 7.5/RT).
For stock solutions of 200-250 mM heat shortly (approx. 30 mins) to 30 °C.
Stock solutions should be stored at -20 °C. Short term storage of few weeks may be done at +4 °C in the dark.
PMSF reacts with thiols. DTT and β-mercaptoethanol reduce the inhibitory effect.
At every stage of isolating or purifying the proteins, PMSF should be added fresh from the stock solution. PMSF is often not sufficient as the only protease inhibitor in the preparation to protect against decomposition processes, as for example high salt concentration (3.0 M) impairs the inhibitory effect of PMSF.

Stock solution: 17.4 mg/ml (100 mM) in isopropanol, ethanol or methanol.
Storage of stock solution protected from light at –20 °C.

For your convenience, **Art. No. 6367.4** comes packed in a 30 ml brown glass bottle. Addition of 20 ml 2-propanol results in a 100 mM stock solution.

Radicicol

≥98 %, for biochemistry

Strong HSP90 inhibitor, macrolactone antibiotic. Binds specifically to the heat shock protein HSP90.

The strong specific binding of radicicol to heat shock protein 90 (HSP90) leads to deregulation of its target mechanisms: cell cycle, cell proliferation, apoptosis/cell vitality. Also binds to yeast HSP90, *E.coli* HtpG and TRAP-1. Antifungal effects are probably caused by inactivation of chitin synthase in fungal cells.

Directions for use

Working concentration: 5–300 µM

Stock solution: 10 mg/ml (27 mM) in ethanol or DMSO
Storage of stock solution at –20 °C, max. 2 weeks at 4 °C
Photo sensitive! Store protected from light.

Trypsin inhibitor

Trypsin inhibitor inhibits Trypsin with high effiency, and, to a lesser extent, chymotrypsin. Additionally, there is a light inhibiting effect on plasmin, kallikrein, thrombin and a few other proteolytic enzymes.

Directions for use

Recommended final concentration: 1–100 µg/ml

Solutions of higher concentration may be hazy and slightly yellow-coloured.
pH optimum: pH 7.6–8.0.

Trypsin inhibitor

≥10 000 BAEE U/mg

Made from soybeans. Highly active inhibitor for trypsin, weakly inhibitory for chymotrypsin, plasmin, kallikrein, thrombin.

1 mg of lyophilisate inhibits at minimum 10.000 BAEE Units of trypsin.

Directions for use

Application in cell culture (stock solution 1 mg/ml): Following trypsination, add the same volume inhibitor solution as was used for trypsin. Zentrifuge cells (5 mins, 1000 rpm), and remove supernatant. Resuspend cells in medium and cultivate further.

Stock solution: 1–10 mg/ml in H_2O, PBS or other phosphate buffer.
Storage of stock solution in aliquots at –20 °C

Storage temperature: +4 °C

5-Bromo-4-chloro-3-indolyl phosphate *p*-toluidine salt

≥99 %, BioScience Grade

Histochemical substrate for phosphatase.

In combination with NBT ideal for colorimetric detection of alkaline phosphatase activity, in immunohistochemical procedures.

Mechanism

By enzymatic dephosphorylation BCIP is converted to indoxyl which subsequently tautomerizes to the ketone. In basic pH values, this ketone dimerizes and, in doing so, releases H^+ ions. The dye precipitates in the direct vicinity of the phosphatase, hence staining this site in a weak blue colour. Enhencement and darkening of this colour is achieved by adding NBT (Art. No. 4421).

Highly soluble in DMF (20 mg/ml), poorly soluble in water.

Protect from light and humidity.

3,3'-Diaminobenzidine tetrahydrochloride

≥98 %, p.a.

Substrate of horseradish peroxidase. For detection of endogenous peroxidase and for immunohistochemical stainings.

Popular substrate of peroxidases. DAB is used for biochemical and histological detection of endogenous peroxidases like catalase and cytochome oxidase. Additionally, it is the most common substrate for horseradish peroxidase (HRP) in histochemical and cytological assays. DAB is oxidised by HRP, forming a brown precipitate, which is unsoluble in aqueous and organic solvents. This precipitate can be detected in visible light and does not bleach during long-term storage.

Directions for use

Working concentration: 0.05–0.1 % (0.5–1 mg/ml) DAB in buffer (PBS, TBS, pH 7.0–7.6) containing 0.01 % hydrogen peroxide. Always use freshly prepared working solution. For oxidation high concentrations of fresh hydrogen peroxide are needed.

Stock solution: 1–2 % (10–20 mg/ml) in 50 mM Tris buffer, pH 7.3. Storage of stock solution in aliquots at –20 °C

≥98 %, p.a.

Substrate for alkaline phosphatase

Used in combination with BCIP-toluidine salt (X-phosphate) for detection of alkaline phosphatase activity by producing an indigo dye precipitate. Colour enhancer for staining with alkalic phosphatase.

Mechanism

During dimerisation of ketonized X-Phos, H^+ ions are set free which reduce NBT to purple-coloured diformazan. Both dyes precipitate in the direct vicinity of the phosphatase, hence staining this site in a dark violet. Store at +4 °C. Please also see assay protocol for use of BCIP/NBT in immunoblot procedures.

Stock solution: 0.5 g NBT in 10 ml 70 % dimethylformamide. Protect from light and humidity.

ROTI®DAB Kit

for immunochemistry

Substrate kit for detection of HRP activity on blot membranes and slides.

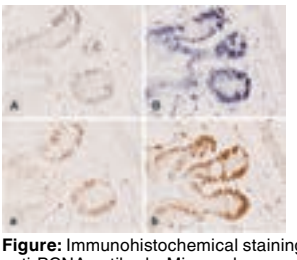

Figure: Immunohistochemical staining of mouse small intestines with an anti-PCNA antibody. Minuscules: pure DAB substrate, capitals: detection supplemented by DAB enhancer (A: $NiCl_2$, B: DAB Metal Enhancer, Art. No. 9204).
A/a: Basic method using 0.6 mg/ml DAB in Tris-buffer.
B/b: Detection performed with the ROTI®DAB Kit.

Mechanism

DAB is oxidized by HRP, forming a brown precipitate, which is insoluble in aqueous and organic solvents. This precipitate can be detected in visible light and does not bleach during long-term storage.

Directions for use

Addition of the DAB Metal Enhancer (Art. No. 9204) doubles the signal strength. Slides may be permanently mounted in hydrophilic, or, after dehydration, in hydrophobic mounting medium.

The kit contains

DAB solution (Art. No. 9869), DAB buffer (Art. No. 9870), and Activation reagent (Art. No. 9871) in dropper bottles. Contents of this Kit may not be bought separately.

One kit is sufficient for staining of approx. 44 minigel blot membranes or 500 slides.

Storage temperature: +4 °C
Transport temperature: cooled

ROTI®Lumin

HRP substrate

- Sensitive and reliable
- For all standard membrane types
- Low background
- No cumbersome preparation of peroxidase buffers
- Suitable for multiple stripping and hybridisation

ROTI®Lumin is a kit for chemoluminescent detection of peroxidase-linked reporters (e.g. HRP-antibodies), as can be found in Western-Blot assays. In comparison to chromogen substrates, ROTI®Lumin displays increased sensitivity and reduced background reaction.

Mechanism

ROTI®Lumin is transformed by the HRP into an excited dianion in the presence of hydrogen peroxide. When the dianion is reversed back to its normal state, light is emitted. The light emission of ROTI®Lumin reaches its maximum within 5 minutes and remains at the maximum level for approx. 1–2 hours.

ready-to-use

ROTI®Lumin

10x conc., fluorescence-free, for protein and cytoimmunochemistry

Chemoluminescence substrate for peroxidase mediated detection systems.

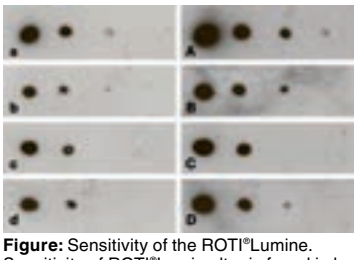

Figure: Sensitivity of the ROTI®Lumine.
Sensitivity of ROTI®Lumin ultra is found in low femtogram range. Detection of a polyclonal antibody (left to right 4 pg, 400 fg, 40 fg, 4 fg) on ROTI®PVDF (Art. No. T830.1). Staining in PBST via a HRP-conjugated anti-rabbit antibody (1:2000).
a/A: ROTI®Lumin ultra; b/B: ROTI®Lumin plus; c/C: ROTI®Lumin; d/D: Product of a competitor, recommended for femtogram range. a/b/c/d: 10 sec. exposition, A/B/C/D: 1 min. exposition.

Directions for use

ROTI®Lumin consists of two solutions, which should be mixed at a 1:1 ratio before use. It can be used with nitrocellulose, nylon and PVDF membranes. Optimal results can be achieved with Immobilon-P® PVDF or ROTI®PVDF.
Can be used for Western-Blotting, ELISA, Southern- Blotting, Dot-Blotting and colony hybridisation. Membranes may be stripped from bound probes using ROTI®Free stripping buffer, and may thus undergo multiple reprobing.

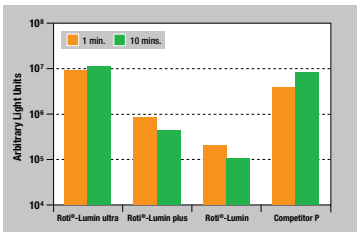

Figure:
Relative sensitivity of ROTI®Lumins. Measurement of the relative light emission following ECL reaction with solubilised HRP.
Competitor P: Product of a competitor, recommended for femtogram range.

The kit contains

120 ml (25 ml) ROTI®Lumin 1 (Art. No. P079) and 120 ml (25 ml) ROTI®Lumin 2 (Art. No. P080).
Contents of this Kit may not be bought separately.

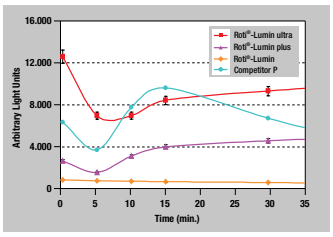

Figure:
Typical course of light emission of the ROTI®Lumins: 0–30 mins., post mixing/ spraying. Competitor P: Product of a competitor, recommended for femtogram range.

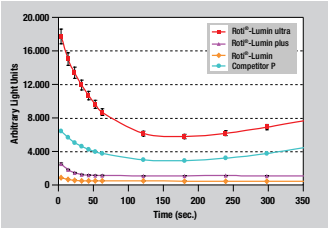

Figure:
Typical course of light emission of the ROTI®Lumins: 0–5 mins., post mixing/ spraying. Competitor P: Product of a competitor, recommended for femtogram range.

2 x 120 ml is sufficient for approx. 3,500 cm^2 membrane (approx. 50 mini gel blots) or 2,400 wells in the ELISA.

3,3',5,5'-Tetramethylbenzidine dihydrochloride

≥99 %, for biochemistry

Water-soluble peroxidase substrate

Tetramethylbenzidine dihydrochloride is used as highly sensitive substrate for detection of horseradish peroxidase labelled probes, particularly in solution-based assays like ELISA techniques. It produces a soluble, blue-coloured end product, which can be read spectrophotometrically.

The dihydrochloride form is well water-soluble, making it a versatile tool in laborartory science.

Directions for use

Working solution: Immediately prior to use add 2 µl / 10 ml of 30 % hydrogen peroxide (Liem *et al.* (1979) *Anal Biochem*, 98:388-93).

Stock solution: 0.1 mg/ml in 50 % acetic acid or phosphate citrate buffer (50 mM NaH_2PO_4, 25 mM citric acid, pH 5.0). For solubilisation, heat to 45 °C and sonicate.

Storage of stock sol.: At +4 °C if tightly sealed. Oxidation can be seen by colour-shift to a faint blue.

X-β-Gal

≥99 %, BioScience Grade

Colorimetric substrate of β-galactosidase. For biochemistry and molecular biology.

Ideal for colorimetric detection of β-galactosidase activity, for instance during blue-/white selection.

Mechanism

Being a galacto pyranoside, IPTG inhibits the lac repressor, therefore leading to the induction the lac promotor. Subsequently, using the plasmid as matrix the C-terminal 146 amino acid fragment of the bacterial β-galactosidase is expressed, which functions as so called α-donor and complements the C-terminally deleted bacterial β-galactosidase. The then functional β-galactosidase restricts the galactoside X-Gal, resulting in a blue-coloured dye - therefore, these lac+ clones are coloured dark blue.
Since the C-terminal part of the α-donor is located **upstream** and the N-terminal part is located **downstream** of the multi cloning site of the plasmid, inserted DNA normally leads to frame shift or at least to major chain elongation, resulting in an unfunctional α-donor and no functional galactosidase – recombinant clones are white. The appearance of light blue clones either results form very short insertions or from the fact that in some plasmids the C-terminal fragment cloned upstream of the MCS is sufficient for α-complementation and restriction of a small amount of X-Gal.

Directions for use

Working solution: for blue/white selection of recombinant clones on agar plates use 0.3 µl stock solution per ml broth/agar.

Stock solution: 100 mg/ml (240 mM) in DMF, store at –20 °C in the dark

HN36.2	100 mg	glass	256,95
HN36.3	250 mg	glass	600,95

Albumins

BSA are proteins yielded from blood, which function as binding and transport proteins in blood circulation. Depending on the preparation process, the albumins contain different quality and quantities of metabolic products, enzymes, peptides, fatty acids, vitamines, etc. and are suitable for different applications.

Cohn/ethanol lyophilsate

BSA made of fresh bovine plasma by fractionation (Cohn method) and subsequent crystallisation from alcohol solution at a low temperature.

Heatshock albumin

For purification of this Albumin an extensive heat-shock/diafiltration method is used, which has been shown to bring more highly purified products than the standard process acc. to Cohn. The process is taking place in a closed system.

All albumins are available in bulk on request.

Albumin/BSA solutions

BSA

Standard albumin for biochemical assays, as stabilisation reagent and as reference in quantitation assays.

Very suitable for all standard applications where a high quality albumin is to be used that does not meet any special requirements. Suitable for immunoassays, as blocking reagent, for stabilising enzymes and antibodies, for industrial applications on a large scale and much more.

S ready-to-use

Albumin solution 20 %

20 %, sterile, for biochemistry and cell biology

Wide range of applications, e.g. as protein standard or blocking reagent.

Heatshock albumin.
Long-term storage in aliquots at –20 °C possible.
Storage temperature: +4 °C
Transport temperature: cooled

(acc. to 0,667 L x mol^{-1} x cm^{-1} for a 0,1 % solution).

Albumin/BSA Lyophilisates

Origin Australia/New Zealand

Albumin, NZ-Origin is particularly recommended when procedural regulations require the use of albumin of guaranteed origin Australia or New Zealand.

TSE-/BSE-free

Albumin Fraction V, NZ-Origin

≥98 %, for biochemistry and molecular biology

Wide range of applications, e.g. as protein standard or blocking reagent.

Very suitable for all standard applications where a high quality albumin is to be used that does not meet any special requirements. Suitable for immunoassays, as blocking reagent, for stabilising enzymes and antibodies, for industrial applications on a large scale and much more.

Cohn/ethanol lyophilsate
Recommended if BSA with origin Australia or New Zealand is required.

TSE-/BSE-free

Albumin, sulfhydryl blocked, NZ-Origin

≥98 %, for biochemistry and molecular biology

Monomeric albumin for all sensitive assays.

High quality albumin originating from Australia or New Zealand.
By blocking the thiol groups, the polymerisation of the albumin molecules is very efficiently prevented, which can occur during the storage of powder and solution and change the properties of the albumin. The albumin remains stable over time as a monomer and can, therefore, be used very well for reproducible laboratory assays. Due to its low IgG and protease content, the albumin is excellent for all immunoassays such as WESTERN or ELISA and as a stabilising reagent for proteins, antibodies etc. Furthermore, the Albumin, sulfhydryl-blocked, NZ-Origin is recommended for all thiol or sulfur sensitive assays.

Tested for the absence of detectable free sulfhydryl groups.

Heatshock albumin.
Constant properties over longer storage time.
Recommended if BSA with origin Australia or New Zealand is required.

M ~66 000 g/mol

TSE-/BSE-free

Albumin Fraction V, biotin-free, NZ-Origin

≥98 %, biotin-free, for biochemistry and molecular biology

Excellent as blocking and stabilising reagent in all biotin/streptavidin-mediated detection systems.

Tried and tested albumin preparation, suitable for all immunoassays, for stabilising proteins, enzymes and antibodies and as a blocking-reagent in hybridisation.

Tested for its absence of biotin.

Cohn/ethanol lyophilsate
Recommended if BSA with origin Australia or New Zealand is required.

Albumins

Protease-free **TSE-/BSE-free**

Albumin, protease-free, NZ-Origin

≥98 %, protease-free, for protein analysis and molecular biology

For all sensitive enzymatic assays.

High purity albumin with origin from Australia or New Zealand with very low protease content. Excellent in sensitive immuno assays, as a stabilising reagent for proteins, enzymes and antibodies and also suitable as a blocking reagent in hybridisation techniques.

Tested for the absence of detectable protease activity.

Heatshock albumin.
Recommended if BSA with origin Australia or New Zealand is required.

DNAse-free **RNAse-free** **Protease-free** **TSE-/BSE-free**

Albumin, IgG free, NZ-Origin

>98 %, IgG-free, for biochemistry and molecular biology

Recommended as blocking and stabilising reagent in all antibody-mediated detection systems.

Albumin, highly purified and tested for presence of immunoglobulins (IgGs), proteases, RNAse, and DNAse. Albumin, IgG-free is particularly recommended for use as stabilising reagent in antibody solutions, and as blocking reagent in all assays using detection systems via anti-bodies.
Also very well suited for stabilising of hot-start-PCRs mediated by antibodies, or as blocking reagent in antibody-detected hybridisations.

Tested for the absence of detectable IgG.

Heatshock albumin.
Recommended if BSA with origin Australia or New Zealand is required.

TSE-/BSE-free

Albumin, fatty acid-free, NZ-Origin

≥98 %, fatty acid-free, for biochemistry and molecular biology

Suitable as blocking or stabilising reagent in all fatty acid-sensitive assays.

Highly pure albumin, prepared from blood of cattle certified for origin from Australia or New Zealand.
Albumin, fatty acid-free, NZ-Origin, may well be used for blocking of all assays regarding membrane proteins, or other approaches aiming for fatty acid-associated proteins. It is also well suited for stabilisation of antibodies, enzymes or fatty acids. Albumin, fatty acid-free, NZ-Origin, shows exceedingly low content of endotoxins and IgGs, making it a useful reagent for cell biology also.

Tested for very low fatty acid concentration.

Heatshock albumin.
Recommended if BSA with origin Australia or New Zealand is required.

Albumin, very low endotoxin, NZ-Origin

CELLPURE® ≥98 %, very low endotoxin, for cell biology

With extremely low endotoxin content. Recommended for the culture of primary cells and cell lines. Also suitable for sensitive cell culture assays.

Albumin, very low endotoxin, NZ-Origin is particularly recommended for use during culturing of eukaryotic cells and in cell culture assays. This albumin of superior quality is thoroughly tested for its very low endotoxin content, therefore providing trouble-free cell culture assays and reliable results even when handling primary cells or stem cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays.

Tested for very low endotoxin content.

Heatshock albumin.
Recommended if BSA with origin Australia or New Zealand is required.

TSE-/BSE-free

Albumin Fraction V, pH 5.2, Europe

>97 %, for protein analysis

Non-neutralized albumin. Suitable as protein standard or hapten carrier, recommmended for use in ELISA and Western-Blotting.

Albumin Fraction V, pH 5.2 is basically suitable for all applications using albumin of Cohn-fraction V, e.g. for stabilisation of enzymes and antibodies, or as hapten carrier in immunoassays.
The pH value of albumin pH 5.2 is close to its pI and the protein is only weakly charged. It is, therefore, particularly recommended for use in ELISA and Western blotting, since it may help in further reducing background signals.

Albumins

Recommended Application of Albumins

Albumin	Art. No.	Recommended Application
Albumin Solution 20 %, Europe	9400	Stabilization of proteins in general, especially antibodies. Suitable for all biochemical assays, e. g. as protein standard or blocking reagent, unless special requirements apply.
Albumin Solution 30 %, Europe	9401	Stabilization of proteins in general, especially antibodies. Suitable for all biochemical assays, e. g. as protein standard or blocking reagent, unless special requirements apply.
Albumin Solution 30 %, with azide, US-Origin	9414	Stabilization of proteins in general, especially antibodies. Suitable for all biochemical assays, e. g. as protein standard or blocking reagent, unless special requirements apply. Recommended if albumin with certified origin USA has to be used.
Fraction V, Europe	1ETA	Stabilisation of proteins and blocking reagent in protein biochemical detection systems. Basically suitable for all assays unless specific requirements apply.
Fraction V, US-Origin	3854	Stabilisation of proteins and blocking reagent in all standard biochemical detection systems. Basically suitable for all assays unless specific requirements apply. Recommended if albumin with certified origin USA has to be used.
Fraction V, NZ-Origin	8076	Stabilisation of proteins and blocking reagent in protein biochemical detection systems. Basically suitable for all assays unless specific requirements apply. Recommended if albumin with certified origin New Zealand or Australia has to be used.
Fraction V, pH 5.2, Europe	2834	Stabilisation of proteins and blocking reagent. Particularly recommended for Western-Blotting and ELISAs.
pH 5.2, US-Origin (heat shock)	1ET8	Stabilisation of proteins and blocking reagent. Particularly recommended for Western-Blotting and ELISAs. Recommended if albumin with certified origin USA has to be used.
sufhydryl-blocked, NZ-Origin (heat shock)	1ET3	Particularly sensitive assays where monomeric albumin is guaranteed to be used or where reproducibility is particularly important. Can be stored as monomers over a longer period of time.
Fraction V, biotin-free, NZ-Origin	0163	Stabilisation of proteins and blocking reagent in all biotin / streptavidin-mediated detection systems (membrane-bound- or coating-plate-assays, as well as soluble assays).
Fraction V, protease-free, Europe	T844	Stabilisation of proteins in general, antibodies in particular, and blocking reagent in sensitive enzymatic detection systems, activity tests or protein/protein-interaction assays.
protease-free, US-Origin (heat shock)	1ET5	Stabilisation of proteins in general, antibodies in particular, and blocking reagent in sensitive enzymatic detection systems, activity tests or protein/protein-interaction assays. Recommended if albumin with certified origin USA has to be used.
protease-free, NZ-Origin (heat shock)	1ET7	Stabilisation of proteins in general, antibodies in particular, and blocking reagent in sensitive enzymatic detection systems, activity tests or protein/protein-interaction assays. Recommended if albumin with certified origin New Zealand or Australia has to be used.
IgG-free, US-Origin (heat shock)	1ET9	Stabilisation of antibodies. Blocking reagent in all antibody-mediated detection systems and Radio-Immuno Assays (RIAs). Reduces false-positive signals. Recommended if albumin with certified origin USA has to be used.
IgG-free, NZ-Origin (heat shock)	3737	Stabilisation of antibodies. Blocking reagent in all antibody-mediated detection systems and Radio-Immuno Assays (RIAs). Reduces false-positive signals. Recommended if albumin with certified origin New Zealand or Australia has to be used.
Fraction V, fatty acid-free, Europe	0052	Stabilisation of proteins and blocking reagent in detection systems. Particularly recommended for experiments on metabolism proteins, membrane-associated proteins and cell surface proteins.
fatty acid-free, US-Origin, (heat shock)	9638	Particularly for experiments on metabolism proteins, membrane-associated proteins and cell surface proteins. Also well suited for cell biology and all antibody-mediated detection systems. Recommended if albumin with certified origin USA has to be used.
fatty acid-free, NZ-Origin (heat shock)	1ETC	Stabilisation of proteins and blocking reagent in detection systems. Particularly for experiments on metabolism proteins, membrane-associated proteins and cell surface proteins. Recommended if albumin with certified origin New Zealand or Australia has to be used.
very low endotoxin, US-Origin (heat shock)	1ET6	Cell culture of all cell lines, primary cells, stem cells. Cloning and 3D-cultures or cell-stressing assays like transfections, *in vitro* infections, cell fusion. Recommended if albumin with certified origin USA has to be used.
very low endotoxin, NZ-Origin (heat shock)	1ET4	Cell culture of all cell lines, primary cells, stem cells. Cloning and 3D-cultures or cell-stressing assays like transfections, *in vitro* infections, cell fusion. Recommended if albumin with certified origin New Zealand or Australia has to be used..

PBS and TBS as powder mix, ready-to-use solution, tablets and in pouches

ROTI®PreMix PBS

for biochemistry and molecular biology

General solution for assays in molecular biology and biochemistry.

Among biological buffers, PBS is the one most commonly used. Due to its isotonic and non-toxic nature, PBS is suitable for applications in cell culture as well as in biochemistry and molecular biology. PBS is frequently used for sample dilution and as base solution in immuno-chemical processes.

Directions for use

Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving. For long-term storage, buffer solution should be kept at +4 °C.

1x PBS solution is prepared by dissolution of 9.55 g/l in highly pure water.

WGK 1

Prepared 1x PBS solution contains: 0.14 M NaCl, 2.7 mM KCl, 10 mM phosphate, pH-value 7.4 ±0.2, when prepared in deionized or distilled water.

for biochemistry and molecular biology

General solution for assays in molecular biology and biochemistry.

Buffer solution composed of PBS with the addition of the non-ionic detergent Tween® 20. Since detergents are known to reduce non-specific protein-protein interactions, PBST is preferably used as basic solution during Western blotting, ELISA or other immunochemical assays.

Directions for use

Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at +4 °C.

1x PBS solution is prepared by dissolution of 10.05 g/l in highly pure water.

WGK 1

Prepared 1x PBST solution contains: 0.14 M NaCl, 2,7 mM KCl, 10 mM phosphate, 0.05 % Tween® 20, pH-value 7.4 ±0.2, when prepared in deionized or distilled water.

Art. No.	Pack Qty.	Pack.	€

0987.2	1.25 kg	plastic	317,15

S ready-to-use

ROTI®Stock 10x PBS

10x conc., BioScience Grade, ready-to-use, sterile filtered

For protein biochemistry, cytology, and molecular biology.

10fold stock solution phosphate buffered saline, pH 7,4.

Very versatile standard solution for detection systems in protein biochemistry, cytological stainings and molecular biological assays.

Directions for use

1 x PBS is, for instance, used as basic solution for Western-Blot analyses, ELISAs and other enzymatic assays, for solving and dilution of proteins, for immunocytological and immunohistological assays, as well as for *in situ* hybridisations, apoptosis detection systems and staining of nuclei.

Recommended for **HRP**-mediated detection systems.
With original seal.

WGK 1

1.37 M NaCl, 27 mM KCl, 100 mM Na_2HPO_4, 20 mM KH_2PO_4 in deionised water, pH-value 7.4 ±0.25, 0.2 µm filtered.

Original pack 6 x 1 l			141,98/1 l

S ready-to-use

ROTI®Stock 10x PBST

10x conc., BioScience Grade, ready-to-use, sterile filtered

For protein biochemistry, cytology, and molecular biology.

10fold stock solution phosphate buffered saline with Tween® 20, pH 7,4.

Extremely versatile standard solution for protein biochemical detection systems, cytological staining and molecular-biological assays with similar fields of application as ROTI®Stock PBS.

Directions for use

1 x PBST is, for instance, used as basic solution for Western-Blot analyses, ELISAs and other enzymatic assays, for solving and dilution of proteins, for immunocytological and immunohistological assays, as well as for *in situ* hybridisations, apoptosis detection systems and staining of nuclei.
ROTI®Stock PBST can be used directly instead of PBS when the presence of Tween® 20 is required in the detection system.

Recommended for **HRP**-mediated detection systems.
With original seal.

WGK 1

1.37 M NaCl, 27 mM KCl, 100 mM Na_2HPO_4, 20 mM KH_2PO_4, 0.5 % Tween® 20 in deionised water, pH value 7.4 ±0.25, 0.2 µm filtered.

PBS & TBS

S ready-to-use

ROTI®Stock 10x TBS

10x conc., BioScience Grade, ready-to-use, sterile filtered and steam sterilized

For protein biochemistry, cytology, and molecular biology.

10fold stock solution tris buffered saline, pH 7,4.

Very versatile standard solution for detection systems in protein biochemistry, cytological stainings and molecular biological assays.

Directions for use

1 x TBS is, for instance, used as basic solution for protein detection systems like Western-Blot analyses and Far-Western assays, for immunocytological and immunohistological assays, as well as for whole mount *in situ* hybridisations, apoptosis detection systems and staining of nuclei.

Recommended for **AP**-mediated detection systems.
With original seal.

WGK 1

1.5 M NaCl, 30 mM KCl, 250 mM Tris in deionised water, pH value 7.4 ±0.25, 0.2 µm filtered and steam sterilised.

Art. No.	Pack Qty.	Pack.	€
1060.1	1 l	glass	155,90
Original pack 6 x 1 l			148,11/1 l

S ready-to-use

ROTI®Stock 10x TBST

10x conc., BioScience Grade, ready-to-use, sterile filtered and steam sterilized

For protein biochemistry, cytology, and molecular biology.

10fold stock solution tris buffered saline with Tween 20, pH 7,4.

Extremely versatile standard solution for protein biochemical detection systems, cytological staining and molecular-biological assays with similar fields of application as ROTI®Stock TBS.

Directions for use

1 x TBST is, for instance, used as basic solution for protein detection systems like Western-Blot analyses and Far-Western assays, for immunocytological and immunohistological assays, as well as for whole mount *in situ* hybridisations, apoptosis detection systems and staining of nuclei.
ROTI®Stock TBST can be used directly instead of TBS when the presence of Tween 20 is required in the detection system.

Recommended for **AP**-mediated detection systems.
With original seal.

WGK 1

1.5 M NaCl, 30 mM KCl, 250 mM Tris, 0.5 % Tween® 20 in deionised water, pH value 7.4 ±0.25, 0.2 µm filtered and steam sterilised.

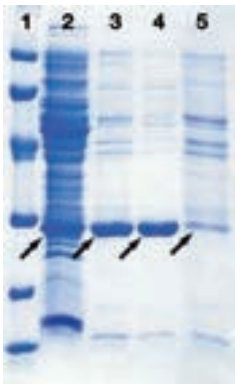
Protein Isolation

Affinity Chromatography

ROTI®Garose Beads and Columns for Isolation of His-tag Proteins

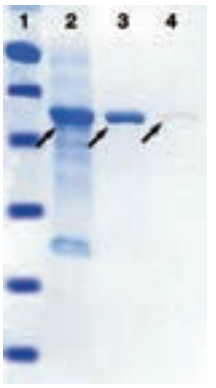
Ion charged agarose beads for low pressure affinity chromatography. IMAC matrix.



Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort. ROTI®Garose His Beads offer the perfect solution for your specific application of low flow column chromatography or protein isolation in batch mode.

The matrix of ROTI®Garose His Beads consists of crosslinked and beaded 6 % agarose, IDA- or NTA-conjugated and charged with divalent ions. ROTI®Garose His beads result in eluates with considerably low metal contamination. ROTI®Garose Beads may repeatedly be regenerated, making them very cost-effective.
The matrix is stable in al commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).

- Simple and rapid one-step purification of His-tagged proteins from total lysates
- High recovery rate of very pure proteins
- Superior binding capacity
- Easy elution and regeneration
- Very low ion leaching
- Compatible with denaturing and reducing reagents



Nickel chelates recognize two exposed histidine tags with good specificity and very high affinity, making the Ni^{2+} charged matrix the first choice for **all standard applications**. ROTI®Garose His/Ni beads give **very high yields of pure proteins** with considerably low metal contamination.

Figure: SDS-PAGE of 6xHis-fuculose aldolase, 28 kDa (arrows). Very high yield of well purified proteins.
1: Marker, 2: Protein raw extract, 3,4: 6xHis target protein purified with ROTI®Garose His/Ni Beads or Column, respectively, 5: 6xHis target protein purified by competitor product.

Cobalt chelates recognize two exposed, vicinal histidins with superior specificity and good affinity, resulting in acceptable to **good recovery rates, yielding proteins of superior purity**. This matrix is, therefore, the perfect choice if extremely pure proteins are required, or if hard-to-separate proteins shall be isolated.

Figure: SDS-PAGE of highly expressed 6xHis-glutaryl acylase, 58 kDa (arrows). Good yield of extremely pure proteins.
1: Marker, 2: Protein raw extract, 3: 6xHis target protein purified with ROTI®Garose His/Co Beads, 4: 6xHis target protein purified by competitor product.

► ROTI®Spin centrifugal devices see chapter Molecular Biology, DNA-/RNA Isolation

Nickel Charged IMAC Beads and Columns – IDA Linker

ROTI®Garose-His/Ni IDA

For the isolation of very high yields of pure His-tagged proteins under non-reducing conditions.
Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort.
ROTI®Garose His/Ni Beads and ready-to-use columns offer the perfect solution for your specific applications in the field of benchtop column chromatography, for protein isolation in batch processes or under medium pressures (MPLC, FPLC). Depending on the product, our beads are optimally suited for low or high flow rates or when small or large sample volumes are to be purified. The ready-to-use columns and cartridges offer you the perfect solution for fast and easy purification of His-tag proteins from total lysate.

- Superior recovery rate of pure His-tagged proteins
- Very low Nickel leaching
- Compatible with denaturing reagents

The matrix of ROTI®Garose His/Ni products consists of crosslinked and beaded 6 % agarose, IDA-conjugated and charged with divalent Nickel ions. Nickel chelates recognize two exposed histidines with good specificity and very high affinity, making the Ni^{2+} charged matrix the first choice for all standard applications. ROTI®Garose His/Ni beads give very high yields of pure His-tagged protein with considerably low metal contamination.

Directions for use

The tridentate IDA cross-linker provides easy elution with low amounts of imidazole. Additionally, ROTI®Garose Beads may repeatedly be regenerated, making them very cost-effective.
The Matrix is stable in all commonly used reagents including denaturing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).
A special feature is the modified polychelate linker used in the ROTI®Garose-His/Ni HPBeads plus (0806). For more detailed data please see this product.
For insulation under reducing conditions we recommend ROTI®Garose-His/Ni HPBeads plus or ROTI®Garose-His/Ni NTA beads.

ready-to-use

ROTI®Garose-His/Ni HPCartridges

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by high pressure affinity chromatography.

Affinity chromatography colums · IMAC columns · Nickel agarose beads · Nickel charged IMAC columns

Prepacked cartridges with Nickel charged IDA-agarose bead matrix for medium pressure affinity chromatography (MPLC). Optimal for automated liquid chromatography, or if proteins shall be isolated under pressure.
In ROTI®Garose His/Ni HPBeads, the advantages of the highly efficient Nickel-His binding have been combined with a bead technology allowing a very rapid flow rate.
Matrix in 20 % ethanol.

- Very fast and simple purification of His-tagged proteins from total lysates
- Binding capacity (purified 6xHis protein) of 110 mg per ml matrix / 550 mg per cartridge
- Recommended flow rate 5 ml/min.
- Recommended pressure 5 bar [0,5 MPa] (70 psi)
- Standard ports 10-32 (1/16″)
- Easy elution and regeneration
- **Very versatile. Applicable with ÄKTA™FPLC™, pump and syringe.**
- **For medium pressure flow chromatography**

Suitable for

ÄKTA™FPLC™ and for sample application via peristaltic pump or syringe.

Directions for use

ROTI®Garose His/Ni HPCartridges are prepacked and may be used directly.

Column material made from polypropylene and polyethylene (frit), Inner diameter 1,6 cm, height 2,5 cm, inlet port 10-32 (1/16″) female, outlet port 10-32 (1/16″) male.

Suitable for MPLC, FPLC, ÄKTA™ and peristaltic pumps.
Matrix volume 5 ml, whole volume 10 ml. For approx. 500 mg His labelled protein.

Prepacked columns, binding capacity ca. 500 mgl/column

Storage temperature: +4 °C

UN no. 1170 · ADR 3 III · WGK 3

ready-to-use

ROTI®Garose-His/Ni Columns

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by affinity chromatography.

Affinity chromatography colums · IMAC columns · Nickel agarose beads · Nickel charged IMAC columns

Prepacked columns with nickel-loaded IDA agarose bead matrix for low-pressure affinity chromatography.
ROTI®Garose His/Ni Columns offer the perfect solution for fast and simple isolation of His-tagged proteins from total lysates.
Matrix in 20 % ethanol.

- Fast and simple purification of His-tagged proteins from total lysates
- Binding capacity (purified 6xHis protein) of 117 mg per ml matrix
- Easy elution and regeneration
- **For gravity flow chromatography**

Suitable for

all general applications, or if proteins of very small amount shall be isolated without loss.

Directions for use

Column material made from polypropylene and polyethylene (frit).
May be autoclaved at 121 °C for 30 mins.

Prepacked colums for gravity flow chromatography.
Matrix volume 1 or 5 ml, whole volume 12 or 35 ml, respectively.
For approx. 100 and 500 mg His labelled protein.

Prepacked columns, binding capacity ca. 100 (.1) resp. 500 (.2) mg/column $(His)_6$

Storage temperature: +4 °C

ROTI®Garose-His/Ni Beads

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by affinity chromatography.

Agarose beads for affinity chromatography · IMAC matrix/nickel charged · Nickel agarose beads · Column matrix for protein isolation · IMAC beads

Nickel charged IDA-agarose beads for low pressure affinity chromatography.
50 % bead suspension in 20 % ethanol.

- One-Step purification of His-tagged proteins from total lysates
- Binding capacity (purified 6xHis protein) of 117 mg per ml matrix
- Easy elution and regeneration
- **For batch mode and gravity flow column chromatography**

Suitable for

all general applications, or if proteins of very small amount shall be isolated without loss.

Directions for use

May be autoclaved at 121 °C for 30 mins.

For batch mode and gravity flow

Bead suspension, binding capacity 117 mg/ml packed matrix $(His)_6$

ROTI®Garose-His/Ni HPBeads

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by fast or large scale affinity chromatography

Agarose beads for affinity chromatography · IMAC matrix/nickel charged · Nickel agarose beads · Column matrix for protein isolation · IMAC beads

Nickel charged IDA-agarose beads for affinity chromatography under medium pressure, with high flow rate or with big sample-/matrix volume. In ROTI®Garose-His/Ni HPBeads, the advantages of the highly efficient Nickel-His binding have been combined with a bead technology allowing a very rapid flow rate. ROTI®Garose-His/Ni HPBeads are ideal for purifying large sample volumes.
50 % bead suspension in 20 % ethanol.

- Rapid one-step purification of very pure His-tagged proteins from total lysates
- Very high binding capacity for 6xHis-tagged protein
- Easy elution and regeneration
- **For batch mode, gravity flow, MPLC und FPLC**
- **Recommended for big matrix volumes**

Suitable for

MPLC and FPLC, or if His-tag proteins shall be isolated either **in particularly short time or in big amounts**.

Directions for use

May be autoclaved at 121 °C for 30 mins.

Suitable for LPLC, FPLC and MPLC and big matrix volumes

Bead suspension

Storage temperature: +4 °C

UN no. 1170 · ADR 3 III · WGK 3

ROTI®Garose-His/Ni HPBeads plus

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by fast or large scale affinity chromatography under presence of EDTA or DTT

Agarose beads for affinity chromatography · IMAC matrix/nickel charged · Nickel agarose beads · Column matrix for protein isolation · IMAC beads

Nickel charged agarose beads for affinity chromatography under presence of EDTA or DTT. The matrix of choice for applications under low or medium pressure, and applicable for every required sample and/or matrix volume.
In ROTI®Garose-His/Ni HPBeads *plus*, the advantages of the highly efficient Nickel-His binding have been combined with a bead technology allowing a very rapid flow rate. The **specially developed polychelating ligand** forms highly stabile nickel chelates, which are able to isolate His-tagged proteins even from solutions containing 20 mM EDTA or DTT – reliably and without undesired nickel stripping.
50 % bead suspension in 20 % ethanol.

- Rapid one-step purification of very pure His-tagged proteins from total lysates
- High binding capacity for 6xHis-tagged protein (≥80 mg/ml purified His-tagged protein)
- Reliably elution and regeneration
- Minimized Nickel leaching
- **Compatible with 20 mM EDTA and DTT**
- **For batch mode, gravity flow, MPLC und FPLC**
- **Recommended for all matrix volumes**

Suitable for

MPLC and FPLC, or if His-tag proteins shall be isolated either **in particularly short time or in big amounts from reducing solutions**.

Directions for use

In the matrix of ROTI®Garose-His/Ni HPBeads *plus,* IDA was replaced by a polychelator conjugation. This multi dentate cross-linker binds his-tagged proteins very efficiently, leading to high recovery rates with minimized nickel bleeding into the eluate. ROTI®Garose-His/Ni HPBeads *plus* may not be regenerated.

The matrix is very stabile and may generally be used with buffers including the following reagents: ≤20 mM EDTA, ≤20 mM DTT, ≤8 M urea, ≤6 M guanidinium hydrochloride, ≤100 % methanol, ≤100 % ethanol, ≤30 % acetonitrile, pH range 4–9. May be autoclaved at 121 °C for 30 mins.

Suitable for LPLC, FPLC and MPLC and all matrix volumes

Bead suspension, binding capacity ≥80 mg/ml packed matrix $(His)_6$

Storage temperature: +4 °C

UN no. 1170 · ADR 3 III · WGK 3

Warning H226-H319-EUH208

Nickel Charged IMAC Beads and Columns – NTA Linker

ROTI®Garose-His/Ni NTA

For the isolation of His-tagged proteins under reducing conditions. Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort.
ROTI®Garose His/Ni Beads and ready-to-use columns offer the perfect solution for your specific applications in the field of benchtop column chromatography, for protein isolation in batch processes or under medium pressures (MPLC, FPLC). Depending on the product, our beads are optimally suited for low or high flow rates or when small or large sample volumes are to be purified.

- Superior recovery rate of pure His-tagged proteins
- Minimized Nickel leaching
- **Compatible with denaturing and reducing reagents**

The matrix of ROTI®Garose-His/Ni NTA products consists of crosslinked and beaded 6 % agarose, NTA-conjugated and charged with divalent Nickel ions. Nickel chelates recognize two exposed histidine tags with good specificity and very high affinity, making the Ni^{2+} charged matrix the first choice for all standard applications. The tetradentate NTA cross-linker binds his-tagged proteins very efficiently, leading to high recovery rates with minimized nickel bleeding into the eluate.

Directions for use

ROTI®Garose-His/Ni NTA-Beads may be regenerated, making them very cost-effective.
The Matrix is stable in all commonly used reagents including denaturing reagents (like 8 M urea, 6 M guanidinium hydrochloride) and (dependent on the respective buffer) reducing substances (for instance ≤30 mM glutathion, ≤10 mM DTT, ≤10 mM DTE, ≤20 mM β-mercaptoethanol und ≤0,3 % SDS).

ready-to-use

ROTI®Garose-His/Ni NTA-Cartridges

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by high pressure affinity chromatography under reducing conditions

Agarose beads for affinity chromatography · IMAC columns · Nickel agarose beads

Prepacked cartridges with Nickel charged NTA-agarose bead matrix for medium pressure affinity chromatography (MPLC) under reducing conditions.
Immobilized metal ion affinity chromatography (IMAC) under medium pressure is the prefect method to obtain high yield of very pure proteins in minimum time. ROTI®Garose-His/Ni NTA-Cartridges offer the perfect solution for fast and simple isolation of His-tagged proteins from total lysates in reducing buffer solutions.
Matrix in 15 % ethanol.

- Very fast and simple purification of His-tagged proteins from total lysates
- High binding capacity for 6×His-tagged protein
- Recommended flow rate 5 ml/min
- Standard ports 10-32 (1/16″)
- Very versatile. Applicable with ÄKTA™FPLC™, pump and syringe
- Reliable elution and regeneration
- **For medium pressure flow chromatography**

Suitable for

ÄKTA™FPLC™ and for sample application via peristaltic pump or syringe.

Directions for use

ROTI®Garose His/Ni NTA-Cartridges are prepacked and may be used directly.

Column material made from polypropylene and polyethylene (frit), Inner diameter 1,6 cm, height 2,5 cm, inlet port 10-32 (1/16″) female, outlet port 10-32 (1/16″) male.

Suitable for MPLC, FPLC, ÄKTA™ and peristaltic pumps.

Cobalt Charged IMAC Beads and Columns – IDA Linker

ready-to-use

ROTI®Garose-His/Co

For the isolation of high yields of highly pure His-tagged proteins under non-reducing conditions.
Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort.
ROTI®Garose His/Co Beads and ready-to-use columns offer the perfect solution for your specific applications in the field of benchtop column chromatography, for protein isolation in batch processes or under medium pressures (MPLC, FPLC). Depending on the product, our beads are optimally suited for low or high flow rates or when small or large sample volumes are to be purified. The ready-to-use columns and cartridges offer you the perfect solution for fast and easy purification of His-tag proteins from total lysate.

- Good recovery rate of extremely pure His-tagged proteins
- Very low Cobalt leaching
- Compatible with denaturing reagents

The matrix of ROTI®Garose His/Co products consists of crosslinked and beaded 6 % agarose, IDA-conjugated and charged with divalent Cobalt ions. Cobalt chelates recognize two exposed, vicinal histidines with superior specificity and good affinity, resulting in acceptable to good recovery rates only, but yielding proteins of superior purity. This matrix is, therefore, the perfect choice if extremely pure proteins are required, or if hard-to-separate proteins shall be isolated. ROTI®Garose His/Co beads result in eluates with considerably low metal contamination.

Directions for use

The tridentate IDA cross-linker provides easy elution with low amounts of imidazole. Additionally, ROTI®Garose Beads may repeatedly be regenerated, making them very cost-effective.
The Matrix is stable in all commonly used reagents including denaturing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).
For insulation under reducing conditions we recommend ROTI®Garose-His/Ni NTA beads.

ROTI®Garose-His/Co Columns

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by affinity chromatography.

Affinity chromatography colums · Cobalt agarose beads · Cobalt charged IMAC columns · IMAC columns

Prepacked columns with Cobalt charged IDA-agarose bead matrix for low pressure affinity chromatography.
ROTI®Garose His/Co Columns offer the perfect solution for fast and simple isolation of His-tagged proteins from total lysates.
Matrix in 20 % ethanol.

- Fast and simple purification of His-tagged proteins from total lysates
- Binding capacity (purified 6xHis protein) of 135 mg per ml matrix
- Easy elution and regeneration
- **For gravity flow chromatography**

Suitable for

Perfect choice if **extremely pure proteins** are required, or if hard-to-separate proteins shall be isolated.

Directions for use

ROTI®Garose His/Co columns are prepacked and may be used directly.
Column material made from polypropylene and polyethylene (frit).
May be autoclaved at 121 °C for 30 mins.

Prefilled colums for gravity flow chromatography.
Matrix volume 1 or 5 ml, whole volume 12 or 35 ml, respectively.
For approx. 120 and 600 mg His labelled protein.

Prepacked columns, binding capacity ca. 120 (.1) resp. 600 (.2) mg/column $(His)_6$

Storage temperature: +4 °C

ROTI®Garose-His/Co HPBeads

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by fast or large scale affinity chromatography

Agarose beads for affinity chromatography · Cobalt agarose beads · IMAC matrix/cobalt charged · Column matrix for protein isolation · IMAC beads

Nickel charged IDA-agarose beads for affinity chromatography under medium pressure, with high flow rate or with big sample-/matrix volume. In ROTI®Garose-His/Co HPBeads, the advantages of the highly efficient cobalt-His binding have been combined with a bead technology allowing a very rapid flow rate. ROTI®Garose-His/Co HPBeads are ideal for purifying large sample volumes.
50 % bead suspension in 20 % ethanol.

- Fast one-step purification of highly purified His-tag proteins from total lysate
- High binding capacity and excellent specificity for 6xHis-tagged protein
- Easy elution and regeneration
- **For batch mode, gravity flow, MPLC und FPLC**
- **Recommended for big matrix volumes**

Suitable for

MPLC and FPLC, or if **superiorly pure** His-tag proteins shall be isolated either i**n particularly short time or in big amounts**.

Directions for use

May be autoclaved at 121 °C for 30 mins.

Suitable for LPLC, FPLC and MPLC and big matrix volumes

Uncharged IMAC Beads

ROTI®Garose-His uncharged

Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort. ROTI®Garose-His *uncharged* HPBeads offer the perfect solution for your specific application under medium pressure (MPLC, FPLC), if rapid flow rates are desired or if big samples volumes have to be purified.

- Easy elution and regeneration
- Very low metal leaching
- Compatible with denaturing reagents

The matrix of ROTI®Garose-His *uncharged* HPBeads consists of crosslinked and beaded 6 % agarose, IDA-conjugated. In one step, the beads can be loaded safely and rapidly with all standard bivalent metal cations (Ni^{2+}, Co^{2+}, Zn^{2+}, Cu^{2+}).
ROTI®Garose-His *uncharged* HPBeads result in eluates with considerably low metal contamination.

Directions for use

The tridentate IDA cross-linker provides easy elution with low amounts of imidazole. Additionally, ROTI®Garose-His uncharged HPBeads may repeatedly be regenerated, making them very cost-effective.
The Matrix is stable in all commonly used reagents including denaturing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).

ROTI®Garose-His *uncharged* HPBeads

ROTI®Garose for biochemistry

For isolation of His-tagged proteins by fast or large scale affinity chromatography

Uncharged IDA-agarose beads for affinity chromatography under medium pressure, with high flow rate or with big sample-/matrix volume. In ROTI®Garose-His *uncharged* HPBeads, the advantages of the efficient metal ion/His binding have been combined with a bead technology allowing a very rapid flow rate.
50 % bead suspension in 20 % ethanol.

- Rapid one-step purification of His-tagged proteins from total lysates
- High binding capacity for standard me^{2+} ions under rapid one-step loading
- **For batch mode, gravity flow, MPLC und FPLC**
- **Recommended for big matrix volumes**

Suitable for

Suitable for MPLC and FPLC, or if His-tag proteins shall be isolated either in particularly short time or in big amounts.

Directions for use

May be autoclaved at 121 °C for 30 mins.

ROTI®Garose Beads and Columns for Isolation of GST-tag Proteins

ROTI®Garose-Glu/GST

Glutathione coupled agarose beads for isolation of glutathione-S-transferase (GST) or GST fusion proteins.
ROTI®Garose-Glu/GST Beads offer the perfect solution for your specific application of low flow column chromatography or protein isolation in batch mode, under medium pressure (MPLC, FPLC), if rapid flow rates are desired or if big samples volumes have to be purified.

- Rapid, mild and highly specific purification
- Suitable for isolation of GST-peptides and protein complexes of all sizes
- High binding capacity
- Easy elution and regeneration

Efficient and highly specific isolation of GST-tagged proteins via affinity chromatography is based on the affinity of the glutathion-S-transferase to it's substrate glutathione. Merely no unspecific binding of proteins without GST-tag takes place, even during purification from raw extracts, while the biological activity of the purified proteins is preserved by chromatography conditions.

Directions for use

The matrix of ROTI®Garose-Glu/GST Beads consists of beaded 4 % agarose without crosslinking, coupled with glutathione. Elution is carried out via a mild Tris/glutathione buffer, enabling even recovery of native protein complexes. ROTI®Garose-Glu/GST Beads may be regenerated, making them very cost-effective.

ready-to-use

ROTI®Garose-Glu/GST Cartridges

ROTI®Garose for biochemistry

For isolation of GST-tagged proteins by high pressure affinity chromatography

Affinity chromatography colums · Glutathione-agarose beads · Column matrix for protein isolation

Prepacked cartridges with glutathione coupled agarose beads for medium pressure affinity chromatography (MPLC).
ROTI®Garose-Glu/GST Cartridges offer the perfect solution for your specific application of chromatography under medium pressure (MPLC, FPLC).
Matrix in 20 % ethanol.

- Easy isolation of GST-tagged proteins from total lysates
- Recommended flow rate 0,5-5 ml/min.
- Standard ports (10-32)
- **For medium pressure flow chromatography**
- **Very versatile. Applicable with ÄKTA™FPLC™, pump and syringe**

Suitable for

Optimal for isolation of glutathione-S-transferase (GST) or GST fusion proteins via automated liquid chromatography, or if proteins shall be isolated under pressure. Suitable for **ÄKTA**™FPLC™ and for sample application via peristaltic pump or syringe.

Directions for use

ROTI®Garose-Glu/GST Cartridges are prepacked and may be used directly.

Column material made from polypropylene and polyethylene (frit), Inner diameter 1,6 cm, height 2,5 cm, inlet port 10-32 (1/16″) female, outlet port 10-32 (1/16″) male.

Suitable for MPLC, FPLC, ÄKTA™ and peristaltic pumps

Prepacked columns, binding capacity ≥50 mgl/column

ROTI®Garose Beads for Isolation of Biotinylated or Streptavidinated Proteins

ROTI®Garose-Streptavidin Beads

ROTI®Garose for biochemistry

For isolation of biotin-coupled molecules by affinity chromatography

Agarose beads for affinity chromatography · Streptavidin Agarose-Beads · Column matrix for protein isolation

Biotin coupled agarose beads for affinity chromatography.
50 % bead suspension in 20 % ethanol.

- One-step isolation of biotinylated molecules from total lysates
- **For batch mode and gravity flow**

Suitable for

Recommended for isolation of biotinylated molecules in batch mode or via columns via low pressure affinity chromatography.

Directions for use

The matrix of ROTI®Garose-Streptavidin Beads consists of beaded 6 % cross-linked agarose. Elution of iminobiotinylated molecules is performed by 50 mM NH_4-acetate buffer. Isolation of an antigen by biotinylated antibodies can be performed by 0.1 M glycine buffer. Streptavidin is immobilised to the beads through a spacer arm and covalent carboxy/amide linkage, not only minimizing streptavidin leakage during elution, but also enhancing the binding capacity by reduction of steric effects.

For batch mode and gravity flow

Bead suspension, binding capacity ≥120 nmol/ml packed matrix

ROTI®garose-Biotin/Streptavidin

ROTI®Garose-Biotin and Streptavidin beads offer the perfect solution for the isolation of biotinylated and streptavidinated molecules in benchtop column chromatography or in batch procedures.

- Rapid, mild and highly specific purification
- Suitable for isolation of DNA, proteins and other molecules of all sizes
- High binding capacity
- High recovery rates

With a value of K_a~10^{-14}/M, the affinity of avidin and streptavidin for biotin is the strongest non-covalent bond between molecules known in biochemistry. Efficient and highly specific isolation of biotinylatd or avidin/streptavidin-tagged molecules via affinity chromatography is based on this particular affinity.

Directions for use

The matrix is easy to pack and results in very evenly packed columns. Elution is carried out via 8 M guanidine-HCl or prior to gel loading during heating in gel loading buffer. Merely no unspecific binding of unlabelled molecules takes place, even during purification from raw extracts.

ROTI®Garose-Biotin Beads

ROTI®Garose for biochemistry

For isolation of avidin/streptavidin-coupled molecules by affinity chromatography

Agarose beads for affinity chromatography · Biotin-Agarose Beads · Column matrix for protein isolation

Biotin coupled agarose beads for affinity chromatography.
50 % bead suspension in water stabilised with 0,02 % sodium azide.

- One-step isolation of avidin/streptavidin-tagged molecules from total lysates
- **For batch mode and gravity flow**

Suitable for

Recommended for isolation of avidin- or streptavidin labelled molecules in batch mode or via columns via low pressure affinity chromatography.

Directions for use

The matrix of ROTI®Garose-Biotin Beads consists of beaded 4 % cross-linked agarose.
Biotin is immobilised to the beads through a spacer arm and covalent carboxy/amide linkage, not only minimizing biotin leakage during elution, but also enhancing the binding capacity by reduction of steric effects. Merely no unspecific binding of unlabelled molecules takes place, even during purification from raw extracts.

Protein A and G Coated Agarose Beads for Antibody Purification

ROTI®Garose-Protein A/G

For rapid and simple purification of antibodies with reasonable effort, affinity chromatography still is the first choice in most cases. ROTI®Garose-Protein A and G Beads offer the perfect solution for your specific application under medium pressure (MPLC, FPLC), if rapid flow rates are desired or if big samples volumes have to be purified.

- Rapid one-step purification of immunoglobulins from cell lysates and biological solutions
- High yield of very pure immunoglobulins
- Easy elution and regeneration
- Covalent binding of protein G in high ligand density

The matrix of ROTI®Garose-Protein A and G Beads consists of cross-linked and beaded 4 % agarose, coated and covalently coupled with protein A from *Staphylococcus aureus* and protein G from *Streptococcus*, respectively.
The **recombinant protein A** (*rec*A) shares IgG binding properties with natural protein A of *S. aureus* Cowan strain I. It has high affinity for IgG from a variety of different mammalian species, also binding some populations of IgA and IgM.
Binding domains specific for albumin as well as cell walls and cell membranes have been removed in the **recombinant protein G**, in order to ensure the maximum specific IgG binding capacity. It has high affinity for IgG from a variety of different mammalian species, also binding IgG3 with high affinity.

Directions for use

Most immunoglobulins may be eluted in 100 mM glycin or citric acid buffer (pH 3.0). ROTI®Garose-Protein A and G Beads may be regenerated, making them very cost-effective.
May not be autoclaved.

ROTI®Garose-Protein A Beads

ROTI®Garose for biochemistry

For purification of immunoglobulins by affinity chromatography.

Agarose beads for affinity chromatography · Protein A agarose beads · Column matrix for protein isolation

Protein A coated agarose beads for low pressure affinity chromatography. High-performance affinity resin for antibody purification.
50 % bead suspension in 20 % ethanol.

- Binding capacity (human IgG) of approx. 25 mg per ml matrix
- Superior affinity for IgG from various mammalian species
- Binding of some populations IgA and IgM
- **For batch mode, gravity flow, MPLC und FPLC**

Suitable for

Isolation of antibodies, in affinity column chromatography or in batch procedures.

Directions for use

The matrix of ROTI®Garose Protein A Beads consists of cross-linked and beaded 4 % agarose, coated and covalently coupled with protein A from *Staphylococcus aureus*.
High binding affinity to IgGs of many different mammalian species, binding of some populations IgA and IgM.

For batch mode and gravity flow

Bead suspension, binding capacity ca. 25 mg/ml Suspension (human IgG)

Empty cartridges for protein isolation FPLC

Empty cartridges for protein isolation by Fast Protein Liquid Chromatography (FPLC).
The FPLC cartridges combine the easy handling of a small column with a robust design that also allows higher pressures. The cartridges are easy and reproducible to pack, offer 4 sizes in identical design and can be stored very easily.

Suitable for connection to common chromatographs such as ÄKTA™FPLC™.
Standard connections needed are: Luer Lock Male/M6 Female & Union Luerlock Female/M6 Female. This fitting can be avoided in FPLC-8 (0860.1) by fitting the column directly to an ÄKTA™ device through a 1/16″ Male/Female Luer Lock Connector.
Standard connections are usually included with standard FPLC instruments.

Directions for use

Chemically stable in all commonly used reagents.

Technical specifications:

Art. No.	0860.1	0862.1	0866.1	0868.1

ROTI®Quant universal

Biuret solutions

Colorimetric test for detecting and quantifying soluble proteins. Universally applicable.

- **Equals the well-known BCA assay**
- Very easy to handle
- Highly sensitive measurement up to 0.5 µg protein
- Linear measuring range from 0.5 to 200 µg protein
- Can be used in 1-ml-scales and in microtiter plates (can be automated)
- Measurement with standard filters (492 nm wave length) or at 503 nm wave length
- Accelerated reaction and increased sensitivity in mild heat

The special reagent formula effects a high tolerance against interfering factors such as detergents, alcohol and buffer salts, thus making the kit a universal tool for measuring proteins in almost every solution.

Mechanism

The basic mechanism, a PCA enhanced Biuret reaction, is identical with the one used for the well known BCA protein assay. Its result, however, is a bright blue colour which may be measured with standard filters of approx. 500 nm wave length.
ROTI®Quant universal is based on a biuret reaction in combination with a highly specific colorimetric enhancer reaction. The Cu^{++} ions of reagent 2 are reduced to Cu^{+} ions in the alkaline reaction media of the test. The colour development of the copper-specific enhancer reaction is directly proportional to the concentration of the protein which is present. The resulting purple-coloured copper complex exhibits a strong light absorption with a maximum of 503 nm, although the wide maximum of the absorption curve also permits highly sensitive and no-loss measurements at 492 nm. The reaction does not form a true end point measurement: the colour develops slowly at room temperature, this, however, can be accelerated in heat. High sensitivity, therefore, can be achieved even after a short time.

ROTI®Quant universal

for biochemistry

For protein quantitation (PCA enhanced Biuret reaction). High tolerance against detergents, salts and alcohols.

Mechanism

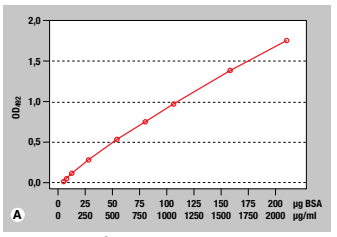

Fig. A: ROTI®Quant universal, standard curve with BSA (bovine serum albumin). Blank-value corrected. Measurement of 100 µl each protein solution.

The kit contains

500/200 ml ROTI®Quant universal reagent 1 (Art. No. 0118) and 40/16 ml ROTI®Quant universal reagent 2 (Art. No. 0119).
Contents of this Kit may not be bought separately.

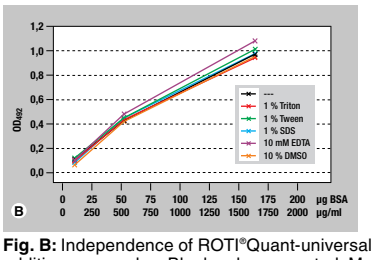

Fig. B: Independence of ROTI®Quant-universal-assay of detergents and other additives, examples. Blank-value corrected. Measurement of 100 µl each protein solution.
(With kind permission of Dr. Angelika Böttger, Zoological Institute, Ludwig-Maximilians-University Munich)

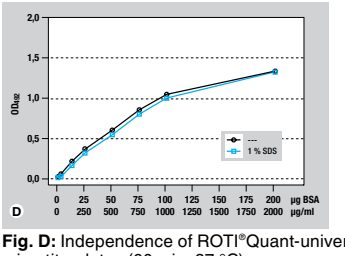

Fig. D: Independence of ROTI®Quant-universal assay of SDS. Microassay in microtiterplates (60 min, 37 °C).

Kit contents are adequate for 500/200 preparations in photometer cuvettes or 5000/2000 preparations in microtiter plates.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Scintillation Cocktail

ROTISZINT®eco plus

Scintillation cocktail

Multi-purpose, ready-to-use scintillation cocktail for Liquid Scintillation Counting (LSC) of β radiators (e.g. ^{3}H, ^{14}C, ^{32}P).
In ROTISZINT®eco plus, di-isopropyl naphthalene is the base reagent of primary scintillators. The cocktail is free of carcinogenic or environmentally dangerous reagents.

- Very high sample acceptance capacity
- High counting efficiency
- Low photo- and chemoluminescence
- Very good colour- and chemical quench resistance
- Environmentally safe and non-carcinogenic
- Virtually odor- and colourless
- High flash point
- No permeation through plastic vials

Excellent sample acceptance capacity for all aqueous and organic samples, optimally suited for solutions with high ionic strength. ROTISZINT®eco plus may be used in general in all biological, biochemical and chemical areas, contemporary typical applications are e. g. measurement of cell culture supernatants, routine analyses, and enzymatic assays. Also well suitable for filter plates.

Advantages of ROTISZINT®Eco plus

ROTISZINT®Eco plus is based on the solvent di-isopropyl naphthaline (DIN), which due to its environmental friendliness is easy to handle, store and ship. It also fulfills all the measuring demands required of efficient scintillation cocktails. ROTISZINT®Eco plus is produced without benzene, toluene, xylene and pseudocumene. The solvent has low vapour pressure, therefore there is no irritation caused by a bad odour. The solution is hardly flammable and economical in use. It is also biodegradable. ROTISZINT®Eco plus has high counting efficiency, excellent quench resistance, good sample stability, no chemoluminescence and no diffusion through plastic vials.

ROTISZINT®Eco plus comes in black 5 l plastic bottles, which can be used as storage containers. They enable easy, safe and place-saving storage.
A practical dispenser helps to remove the required amount of cocktail easily and safely. We recommend the ROTILABO® dispenser (Art. No. Y837.1–Y842.1). In order to completely remove all the liquid, the inner withdrawal tube may be replaced with a longer Teflon® or polyethylene tube (6 mm inner Ø), or by the telescope suction tube (Art. No. AA92.1).

ready-to-use

ROTISZINT®eco plus

ROTISZINT® ready-to-use, for scintillation

LSC-universal cocktail, for hydrophilic and lipophilic samples.

Directions for use

Perfectly suited for measurement of solutions, showing a counting efficiency of 47 % (^{3}H). Through its emulsifying character, ROTISZINT®eco plus elutes samples from filter plates, thus making it also suitable for counting of filter samples.
For reliable quantitative elution we recommend addition of a sample specific elution buffer.

Wavelength

Excitation maximum 190–370 nm
Emission maximum 420 nm

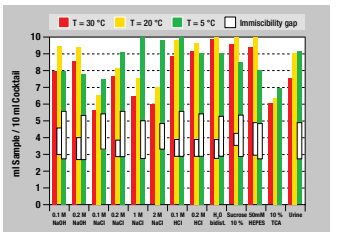

Fig.: Typical sample acceptance capacity
The immiscibility gap is characterized by two phases and may not be used for measurement. By increasing or reducing sample amount in relation to scintillation cocktail, the immiscibility gap may be avoided. Sample acceptance capacities of PBS, TBS etc. equal this of 0.1 M NaCl. Sample acceptance capacities of BSA solutions, cell culture supernatants etc. equal this of HEPES.

Please note

Use of alkylating elution buffers may cause chemoluminescence.
We recommend the use of ROTILABO®Dispensers (Art. No. HAC6.1–HAC9.1, HAE0.1 oder HAE1.1) and telescopic suction pipe (Art. No. AA92.1).

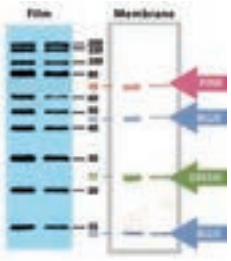
Well suited for measurement of β-emitters like ^{3}H, ^{14}C, ^{32}P.

UN no. 3082 · ADR 9 III · WGK 3

Warning H315-H319-H411

Art. No.	Pack Qty.	Pack.	€
0016.4	100 ml	glass	21,40
0016.3	5 l	plastic	321,45
Original pack 2 x 5 l			305,38/5 l

Application and quench of ROTISZINT®Eco plus



ROTISZINT®Eco plus:

Ideal for measuring **solutions**. Efficiency in solution (^{3}H) 47 %, (^{14}C) 90 %

Please note when measuring **filter discs**:
ROTISZINT®Eco plus contains emulsifying components and elutes the samples from the discs. This increases measuring efficiency, however involves the risk of nonquantitative elution, so that the measurements may not be reproduced as reliably in some cases. The rate of yield when eluting from filter discs can be increased by adding tissue solutizers, whereby the chemical and color quench are also increased. It must be determined for each individual experiment which mixture is suitable.

Western-Blot & ELISA

Western-Blot Marker

ready-to-use

ROTI®-Mark WESTERN PLUS

ready-to-use, pre-dyed

Size range: 15-200 kD
Number of protein bands: 14
- 10 IgG binding
- 4 prestained (tricolour)
Number of lanes/ml: approx. 200 (mini gel)

The ROTI®Mark WESTERN PLUS protein marker covers a wide range of molecular weights from 15 to 200 kDa. It consists of 10 IgG binding proteins with two in their mass enhanced reference bands (30 kDa and 80 kDa).
For the most common type of primary antibodies are IgG type antibodies the ROTI®Mark WESTERN PLUS marker can be used in almost any situation of Western Blot. Appropriate detection methods are fluorescence, chemoluminescence, colour or other systems.

Directions for use

For controlling the gel run during SDS-PAGE and for reliable evaluation of transfer efficiency during Western Blot the marker additionally contains four prestained proteins: 10 kDa (blue), 25 kDa (green), 45 kDa (blue) und 70 kDa (red).

Fig.: Marker after detection on X-ray film (left), after Western blot on PVDF membrane (right)

For direct application to the gel.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Blocking Reagents

► For albumin solutions and lyophilisates in a wide range, see from page 191

Sodium-Casein

≥89 % lactoprotein

Blocking reagent from milk protein, suitable for Western and ELISA. High blocking efficiency based on the amount of small protein and peptide species (<10 kD). Can be used with PBS/PBST and TBS/TBST as well as all standard colorimetric and fluorescent detection systems. Not suitable for PVDF-membranes, biotin/streptavidin mediated labelling (milk contains biotin), and detection of phospho-proteins. **Tip:** Prepare stock solution in 0.3 M NaOH (37 °C), titrate to pH 7.4 (HCl).

Powdered milk

Blotting Grade, powdered, low in fat

For biochemistry, molecular biology and microbiology

Lowfat powdered milk, especially suited for use as blocking reagent in immunological assays like Western-Blot analyses or ELISA. Fine powdered for easy application.

Please note

Milk contains biotin. Not suitable for biotin/streptavidine mediated detection systems.
The added anti-caking agents (phosphates) guarantee easy weighing. Calcium, magnesium and iron phosphates can precipitate in higher concentrated solutions of milk powder.

Milk contains biotin.

ready-to-use

ROTI®Block

10x conc., ready-to-use

Protein free blocking solution

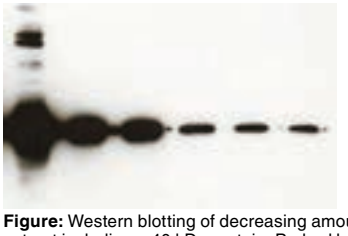

Figure: Western blotting of decreasing amounts (50 ng - 17 pg) of a bacterial extract including a 40 kDa protein. Probed by Anti His Serum (1:1.000) and Carl ROTH Anti Rabbit-HRP, blocking by means of ROTI®Block. Detection via chemoluminescence.

ROTI®Block is a protein-free blocking solution that can be used diluted as a base solution for all steps of Western detections and ELISAs. ROTI®Block replaces PBS/TBS buffers and other buffer systems including the blocking reagents used.
If required, ROTI®Block can be enriched with further blocking reagents, detergents etc. to further optimise the detection system.

Directions for use

Included you will find a detailed instruction manual with protocols, e.g. for stripping ROTI®PVDF-membranes from bound probes without destabilising the blocking, which enables fast rescreening of the filter. ROTI®Block also enables the blot to be Ponceau stained even after blocking.
For detection systems using antibodies specifically directed against protein-phosphorylations we recommend to test and optimise the blocking efficiency prior to assaying your samples.

Contains Tween® 20

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ready-to-use

ROTI®ImmunoBlock

10x conc., ready-to-use

Protein free blocking reagent for immunocytological assays

The protein-free formulation prevents contamination of your detection systems by foreign proteins.
Unspecific interactions of the detection reagents such as antibodies with proteins of the samples are suppressed, while the specific binding sites are retained. The signal to noise ratio is considerably increased and signal detection significantly improved.
The practical ready-to-use solution makes tedious preparation unnecessary. Since the assays can be performed completely in ROTI®ImmunoBlock, highly reproducible results are achieved.

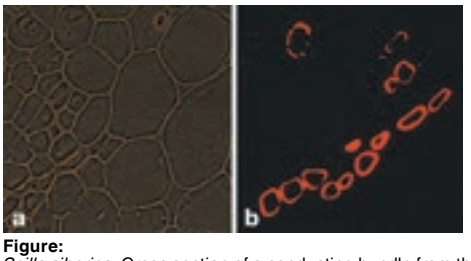

Figure:
Scilla siberica: Cross section of a conducting bundle from the leaf. Immunofluorescent detection of a protein in sieve cells.
a: Phase contrast;

ROTI®Fair BBS

for 500 ml/tablet, for biochemistry and molecular biology

Coating of ELISA plates and blocking supplement.

1x BBS solution is prepared by solubilization of 1 tablet in 500 ml highly pure water.
WGK 1

Danger H319-H360FD

Prepared 1x BBS solution contains: 0.15 M NaCl, 10 mM borate buffer, pH-value 8.2 ±0.05, when prepared in deionized or distilled water.

Art. No.	Pack Qty.	Pack.	€
1005.1	100 unit(s)	plastic	330,60

Enhancers

ready-to-use | DNAse-free | RNAse-free

DAB Metal Enhancer

ready-to-use, for immunochemistry

For enhancement of HRP signals on blot membranes and slides.

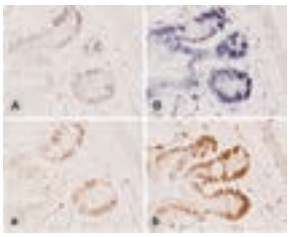

Figure: Immunohistochemical staining of mouse small intestines with an anti-PCNA antibody. Minuscules: pure DAB substrate, capitals: detection supplemented by DAB enhancer (A: $NiCl_2$, B: DAB Metal Enhancer, Art. No. 9204).
A/a: Basic method using 0.6 mg/ml DAB in Tris-buffer.
B/b: Detection performed with the ROTI®DAB Kit.

Mechanism

When the DAB metal enhancer is applied, the sensitivity of DAB staining is about two times higher than with DAB alone.

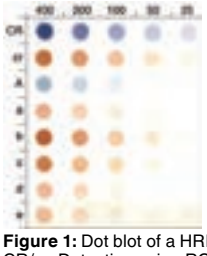

Figure 1: Dot blot of a HRP conjugated antibody (400, 200, 100, 50 and 25 pg).
CR/cr: Detection using ROTI®DAB Kit
A-e: Detection using kits and DAB substrates from other suppliers
CR: Detection under supplementation with DAB Metal Enhancer
A: Detection under supplementation with $NiCl_2$

Directions for use

For application, the DAB substrate components and buffer reagents (for instance ROTI®DAB-Kit, Art. No. 9202) are simply diluted in DAB metal enhancer instead of water.
The purplish gray precipitate resulting from the staining reaction can be detected in visible light and does not bleach during long-term storage. Since it is insoluble in aqueous and organic solvents, slides may be permanently mounted in hydrophilic, or, after dehydration, in hydrophobic mounting medium.

One bottle of 100 ml is sufficient for enhancement of approx. 10 minigel blots or 100 slides.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Signal Enhancer Western/ELISA

Enhancer solution

Kit for amplification of immunochemical detection signals on blot membranes and in ELISA.

- Strong enhancement of signal strength
- Most easy application

The Signal Enhancer Western/ELISA enhances antigen-antibody reactions in a variety of immunoassays such as Western blotting, dot blotting and ELISA. It can significantly enhance detection of weak immunoreactive and low abundance target proteins and is well compatible with all common assay versions, membranes and ELISA plates. Signal enhancement is dependent on several parameters such as the particular antigen/antibody pair, the particular detection enzyme, the substrate chosen and so on. In most cases, however, the signal strength is about 5 to 10fold higher than with the substrate alone.

Compatible with:

- Western and ELISA
- HRP and AP
- all common membranes
- all common substrates

For application, the two solutions Signal Enhancer Western/ELISA-1 and -2 are simply used as buffer solutions for preparation of the primary- and secondary antibody incubation solutions. Following incubation and washing, all common detection procedures may be applied, for instance colour staining with ROTI®DAB-Kit (Art. No. 9202) or chemoluminescent staining with ROTI®Lumin plus (Art. No. 3692).

Signal Enhancer Western/ELISA Set

for immunochemistry

For enhancement of immunochemical detection signals on blot membranes and in ELISA.

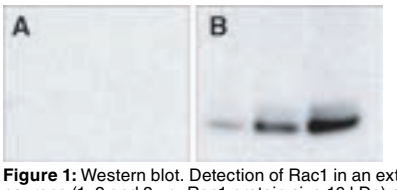

Figure 1: Western blot. Detection of Rac1 in an extract from rat cortical primary neurons (1, 2 and 3 µg, Rac1 protein size 16 kDa) on PVDF. Detection via murine anti-Rac1 and anti-mouse-HRP.
A: Base method w/o enhancer, **B:** Detection via Signal Enhancer Western/ELISA
With kind permission of Dr. K. Ishizuka, Department of Psychiatry and Behavioural Sciences, Johns Hopkins University, Baltimore, USA

The kit contains

Signal Enhancer Western/ELISA-1 (Art. No. 9213) and Signal Enhancer Western/ELISA-2 (Art. No. 9214). 1 Mini-Set: 2 x 50 ml, 1 Set: 2 x 250 ml.

One set with 250 ml each is sufficient for optimization of approx. 25 minigel blots.

Storage temperature: +4 °C
Transport temperature: cooled

Art. No.	Pack Qty.	Packaging	Pack.	€
9211.1	1 kit	2 x 250 ml	plastic	482,70
9211.2	1 kit	2 x 50 ml	plastic	166,10

Signal Enhancer Western/ELISA-1

for immunochemistry

For optimisation of primary antibody binding in immunochemical assays.

The solution Signal Enhancer Western/ELISA-1 enhances reaction between antigens and their corresponding **primary** antibodies in a variety of immunoassays such as Western blotting, dot blotting and ELISA. Even for weak immunoreactive and low abundance target proteins strong signals may thus be achieved. The solution is well compatible with all common assay versions, membranes and ELISA plates.

Directions for use

For application, the solution Signal Enhancer Western/ELISA-1 is simply used as buffer solutions for preparation of the primary antibody incubation solution. Following incubation and washing, all common detection procedures may be applied, for instance colour staining with ROTI®DAB-Kit (Art. No. 9202) or chemoluminescent staining with ROTI®Lumin plus.
When assays are performed using one antibody (labelled) only, application of Signal Enhancer Western/ELISA-2 is recommended.

One bottle with 250 ml is sufficient for approx. 25 assays.

Storage temperature: +4 °C
Transport temperature: cooled

WGK 1

Art. No.	Pack Qty.	Pack.	€
9213.1	250 ml	plastic	278,45

Signal Enhancer Western/ELISA-2

for immunochemistry

For optimisation of binding of secondary and labelled antibodies in immunochemical assays.

The solution Signal Enhancer Western/ELISA-2 enhances binding of **secondary** antibodies in a variety of immunoassays such as Western blotting, dot blotting and ELISA. Even for weak immunoreactive and low abundance target proteins strong signals may thus be achieved. The solution is well compatible with all common assay versions, membranes and ELISA plates.
Recommended for performance of assays using one antibody (labelled) only.

Directions for use

For application, the solution Signal Enhancer Western/ELISA-2 is simply used as buffer solutions for preparation of the secondary antibody incubation solution. Following incubation and washing, all common detection procedures may be applied, for instance colour staining with ROTI®DAB-Kit (Art. No. 9202) or chemoluminescent staining with ROTI®Lumin plus.

Recommended for 1-antibody-assays (labelled).
One bottle with 250 ml is sufficient for approx. 25 assays.

Storage temperature: +4 °C
Transport temperature: cooled

Antibody Diluent

Buffer solution for preparation of antibody incubation solutions and stabile antibody dilutions for storage. With green dye for optimum handling or as a clear solution.

- Enhances signal strength
- Reduces background
- Very easy application
- Compatible with paraffin- and cryo sections

Due to the particularly designed formulation, antigen/antibody binding is enhanced, while reducing background signals in parallel (Grube (2004) *Arch Histol Cytol.* 67:115-34 and Buchwalow *et al.* (2011) *Sci Rep.* 1:28). Stability of the antibodies is significantly enhanced.

Directions for use

The buffer solution is suitable for dilution of all primary and secondary antibodies, all mono- and polyclonals, as well as for all labelled as well as non-labelled antibodies. The antibodies are just diluted in the ready-to-use diluent and applied to the slides after blocking. For reduction of the amount needed and for optimised use of high-priced antibodies we recommend to use the ROTI®Liquid Barrier Marker (red, Art. No. AN92, or colourless, Art. No. AN91), in order to prepare tiny incubation chambers on top of the slides.

ready-to-use

Antibody Diluent green

ready-to-use, for immunohistochemistry

For optimisation of immunohistochemical detection signals.

One bottle for 125 ml is sufficient for enhancement of approx. 125 slides.

Stripping Buffer

ready-to-use

ROTI®Free Stripping Buffer 2.2 plus

ready-to-use

Premixed buffer for efficient stripping of Western-Blot membranes after Chemoluminescence detection, even with hard-to-remove antibodies.

Stripping buffer for removal of high-affinity antibodies, as well as chemoluminescence staining, from Western blot membranes. Due to the low pH of the buffer, the antibody conformation is altered, therefore gently removing all molecules bound to the epitopes (Legocki *et. al.* (1981) *Analyt. Biochem.* 111:385-92). Specially designed additives enhance the efficiency in removing those antibodies requiring long stripping times or high incubation temperatures with standard stripping buffer systems. Advanced formulation without β-mercaptoethanol or DTT for use at room temperature or heated. Suitable for nitrocellulose and PVDF membranes.

- Very effective
- Gentle
- Odour-free
- Simple application
- Also suitable for high-affinity antibodies

Directions for use

Following rinsing steps in PBST- or TBST buffer, the membrane is incubated in ROTI®Free Stripping-Puffer 2.2 plus for 30–60 mins. at room temperature. In case of very persistent antibodies incubation in heated buffer is allowed. After washing it again, the membrane may be blocked and probed anew. The particular time needed for complete stripping depends on the respective antibody/epitope pairing.

Suitable for nitrocellulose and PVDF-membranes.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

UN no. 1760 · ADR 8 III · WGK 1

Warning H290

Remark: Contains SDS. Can be redissolved by heating (max. 45 °C).

3319.2	1 l	glass	134,40
Original pack 6 x 1 l			127,68/1 l

ready-to-use

ROTI®Free Stripping Buffer

ready-to-use

Premixed buffer for stripping of Western-Blot membranes.

The buffer offers a simple tool for removing antibodies and chemo-luminescence staining from Western blot membranes, allowing the valuable membranes to be analysed several times. Excellent when several proteins are to be detected in the same extract, or e.g. when in addition to a specific analysis, proteins in the respective lanes have to be semi-quantified (Kaufmann *et. al.* (1987) *Anal. Biochem.* 161:89-95). Suitable for nitrocellulose and PVDF-membranes.

- Efficient
- Well-tried formulation
- With β-mercaptoethanol
- For stripping under heating
- Low-priced

Directions for use

Wash the membrane in TBST-buffer (Art. No. 1061.1), incubate in ROTI®Free Stripping-buffer in closed hood for 30 min at 56 °C (e. g. in shaking water bath). To strip AP-conjugates, we recommend incubation at 70 °C for 30-60 min. After washing the membrane twice in TBST for 20 min each time, it should first be blocked, before the first antibody is added. The stripping process can be checked by brief chemilumi-nescence staining after washing in TBST.
A slight reduction of the membrane-bound proteins and increase of the background may appear after repeated stripping. Store membranes after stripping wetpacked at +2 to +8 °C.

Suitable for nitrocellulose and PVDF-membranes.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 2

Warning H317-H319-H412

Accessories

Autoradiography Pen

Pen with phosphorous ink for easy marking of those membranes ready for exposure.
The fine tip of the pen also allows individual bands and gel tracks to be marked simply and easily.

Directions for use

The marking is activated by the light in the room prior to exposure. The ink illuminates the X-ray film during exposure and the letters are visible in black ink. The letters are easy to read even after short exposure time. In the event of long exposure, the short half-life value of 2–3 minutes effectively prevents overexposure. The writing is therefore easy to make out after virtually all exposure times. Through the replacement nibs the pen can be reused even after a number of months or after drying out.

Suitable for

chemoluminescence and isotope-radiography. Ideal for marking paper, plastic foil and dried polyacrylamide gels.

Technical specifications:

Art. No.	CL10.1
Type	Autoradiography pen

Western Incubation Trays

Western incubation trays have been specially developed for staining Western-blots. Four different sizes for perfect fit to your respective blot membrane. Stabile and frequently reusable.

Suitable for

all standard Western-staining methods.

Directions for use

The sizes adapted to suit typical Western-blots, reduce the required quantity of antibodies and staining reagents. The trays are compatible with all standard staining methods and can easily be stacked. The airtight lids effectively prevent the solution from evaporating even during longer incubation periods.

reusable

Western Incubation Trays

Type	L x W (mm)	Material	Max. temperature (°C)	Art. No.	Pack Qty.	€
MINI	91 x 66	PS	80	**8862.1**	10 unit(s)	250,50

MAXI	200 x 165	PMMA	60	**8876.1**	1 unit(s)	302,10

Blot incubation trays

Compatible with Western- and Southern blotting methods

- Robust
- Autoclavable
- Reusable

Developed for incubation of filter membranes during signal detection after Western- and Southern blotting. The robust incubation trays can safely be stacked, and, due to the tightly sealing lids, evaporation of solution is prevented even during long incubation periods. The size, adapted to typical membrane sheets, reduces the amount of buffer needed during incubation.

A 121 °C reusable

Blot incubation trays

Directions for use

MINI: The 5 trays may be used separately as well as in uniform.

Type	L x W (mm)	Material	Art. No.	Pack Qty.	€

MAXI	165 x 165	PP	**4812.1**	5 unit(s)	269,85

Western-blot immuno trays

Trays with narrow incubation volumes, especially for the detection procedure of membrane strips in Western blot. Available in two sizes for optimal adaptation to MINI or MAXI gel strips. Sturdy, reusable and with practical lid. Please note: lid and tray must be ordered separately. For the Western-blot immuno tray, MINI (X990.1) the lid, MINI (X991.1) must be ordered and for the Western-blot immuno tray, MAXI (X992.1) the lid, MAXI (X993.1) must be ordered.

Directions for use

Ideal for incubating membrane strips after blotting or for preparing incubation solutions, e.g. during Western-Blot or Immuno-Assay.

A 121 °C reusable

Luminous stencil

Stencil with phosphorescent ordinate system and a pattern of different sized electrophoresis comb wells.

Application examples

Are ideal for controlling and measuring during chemoluminescence detection of blots.

Directions for use

Stencil can be activated by exposure to daylight or to artificial light. When activated, stencils fluoresce for approx. 15 minutes.

ROTI®Cell – Media and Solutions for Cell Culture

The product line for your cell culture. Media and solutions of highest purity, the perfect base line for all standard cell culture applications.

Our ROTI®Cell range is currently being revised for you.
At www.carlroth.com you will always find the latest information on the products and availability. In case you have any questions, please contact our Carl Roth team.

Reagents for Cell Culture

General Reagents

Albumin/BSA

BSA

Heatshock albumin

For purification of this Albumin an extensive heat-shock/diafiltration method is used, which has been shown to bring more highly purified products than the standard process acc. to Cohn. The process is taking place in a closed system.

TSE-/BSE-free

Albumin, very low endotoxin, US-Origin

CELLPURE® ≥98 %, very low endotoxin, for cell biology

With extremely low endotoxin content. Recommended for the culture of primary cells and cell lines. Also suitable for sensitive cell culture assays.

Albumin, very low endotoxin, US-Origin is particularly recommended for use during culturing of eukaryotic cells and in cell culture assays. This albumin of superior quality is thoroughly tested for its very low endotoxin content, therefore providing trouble-free cell culture assays and reliable results even when handling primary cells or stem cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays.

Tested for very low endotoxin content.

Heatshock albumin.
Recommended if BSA with US-Origin is required.

M ~66 000 g/mol

Storage temperature: +4 °C

HEPES

PUFFERAN® CELLPURE® ≥99,5 %

For cell culture, tissue culture and biotechnology.

Extremely versatile buffer. Excellent for cell and tissue cultures and for analysis of biological systems.

Application examples:

- Combined with bicarbonate, HEPES is an excellent medium for human lymphocytoidal cell lines
- HEPES is more effective than $NaHCO_3$ when controlling the pH value in tissue and organ culture
- HEPES-buffered media for chicken and human lung fibroblasts
- Can be used to replace a bicarbonate buffered medium containing serum with a serum-free HEPES-buffered medium for mouse fibroblasts

Tested for low amount of endotoxins.

Buffer reagent according to Good. High buffer capacity at physiological pH-values.

$C_8H_{18}N_2O_4S$ · M 238,31 g/mol

S

ROTI®Cell Bicarbonate solution

CELLPURE® 7,5 %, sterile

For cell culture

Due to it being the main physiological buffer system, sodium bicarbonate still is the most commonly used buffer in cell culture media. For media with Hanks' Salts (HBSS) add a low concentration of ROTI®Cell Bicarbonate solution (350 mg/l = 0,035 % end concentration) and incubate in closed culture vessels. For media with Earle's Salts (EBSS) add a higher concentration of ROTI®Cell Bicarbonate solution (2.200 mg/l = 0,22 % end concentration) and incubate in an open vessel, in an atmosphere supplied with 5 % CO_2 in air.

Solution in water

Art. No.	Pack Qty.	Pack.	€
9165.1	100 ml	plastic	36,45

S

ROTI®Cell Glutamine solution

CELLPURE® 200 mM, sterile

For cell culture

L-glutamine is an essential amino acid required for cell culture growth and is normally present in media in a concentration of 292 mg/l (2 mM). While standard L-glutamine is temperature-sensitive and thus not stable for longer periods, the L-Glutamine form used for this ROTI®Cell Glutamine solution extends by temperature stability and may be stored at room temperature for years, making it a highly valuable tool for cell culture media.
Stable L-glutamine is used in the same concentration as standard, temperature-sensitive L-glutamine.

Temperature-stable solution in 145 mM NaCl

ROTI®Cell Gelatine solution

Gelatine solution

ROTI®Cell Gelatine solution may be used in a variety of applications in Life Science research in general. The following applications, however, are amongst the most popular: coating of cell culture wells in order to improve cell adhesion of various cell types, stabilizing of DNA polymerases, blocking additive in immunochemical assays, and species differentiation processes in microbiology.
Gelatine is a heterogeneous mixture of water-soluble proteins of high average molecular masses present in collagen.

❄ S ready-to-use

ROTI®Cell 0.1% Gelatine solution

CELLPURE® 0,1 % conc., sterile, ready-to-use, in PBS, w/o Ca/Mg

From porcine skin, for cell culture, protein biochemistry and molecular biology

Directions for use

ROTI®Cell 0.1% Gelatine solution for cell culture coating: 100–200 µg (0,1–0,2 ml)/cm².
Hence, we recommend to use the following amounts per well/plate in ml: 0,1–0,2 (48well), 0,2–0,4 (24well), 0,4–0,8 (12well), 1–1,9 (6well), 2,8–5,7 (6 cm plate), 8–15,7 (10 cm plate). The optimal amount depends on the cell type and specific assay parameters and has to be evaluated. Coat by incubation at 37 °C for 30 mins in minimum.

For coating cell culture vessels: 100–200 µg (0,1–0,2 ml)/cm²

Storage temperature: +4 °C
Transport temperature: cooled

❄ S ready-to-use

ROTI®Cell 2% Gelatine solution

CELLPURE® 2 % conc., sterile, ready-to-use, in PBS, w/o Ca/Mg

From porcine skin, for cell culture, protein biochemistry and molecular biology

Directions for use

ROTI®Cell 2% Gelatine solution for cell culture coating: 100–200 µg (5–10 µl)/cm².
Hence, we recommend to use the following amounts per well/plate in ml: 5–10 µl (48well), 10–20 µl (24well), 20–40 µl (12well), 42–85 µl (6well), 0,12–0,24 ml (6 cm plate), 0,31–0,63 ml (10 cm plate). The optimal amount depends on the cell type and specific assay parameters and has to be evaluated. Coat by incubation at 37 °C for 30 mins in minimum.

For coating cell culture vessels: 100–200 µg (5–10 µll)/cm²

Storage temperature: +4 °C
Transport temperature: cooled

ROTI®Cell MEM-AA solution

CELLPURE® 50x conz., sterile, w/o glutamine

for cell culture

Amino acids, essential · Essential amino acids

ROTI®Cell MEM-AA solution consists of a mixture of 12 essential amino acids in water. Since cells are not able to synthesize essential amino acids by themselves, those have to be externally supplemented. By enrichment of cell culture media with ROTI®Cell MEM-AA, the culture medium is supplemented with a preformulated mixture of essential amino acids perfectly suited for culturing of most eukaryotic cells. For each amino acid, dilution by 1:50 of ROTI®Cell MEM-AA solution yields the final concentration known from Eagle's Minimum Essential Medium.

Solution in water.
Dilution 1:50 in cell culture medium. End concentration per amino acid conforms to EMEM.

Storage temperature: +4 °C
Transport temperature: cooled

ROTI®Cell MEM-NEAA solution
ROTI®Cell Water

Antibiotics for Cell Culture

S ready-to-use

ROTI®Cell Myco-Free

CELLPURE® 50x conc., sterile, ready-to-use

For elimination of mycoplasm contamination in cell culture.

ROTI®Cell Myco-Free is a reliable, rapidly effective reagent for eradication of contaminations by mycoplasms and other bacteria in cell culture.

The sterile solution ROTI®Cell Myco-Free is composed of a mixture of specially selected antibiotics in PBS, which are known to be highly potent, even in very low concentrations. The effect is due to a specific interaction with prokaryotic protein biosynthesis by inhibition of translation and of the transcription complex located gyrase. Eukaryotic cells are not affected.

- Simple Application
- Reliable eradication
- Effective against all mycoplasms and bacteria
- Not cytotoxic

Directions for use

Culture media are supplemented by the ROTI®Cell Myco-Free stock solution diluted by 1:50. Mycoplasms and bacteria are reliably and efficiently eliminated.

One bottle of 100 ml is sufficient for approx. 300 applications.

Storage temperature: –20 °C
Transport temperature: cooled

ROTI®Fair NaCl tablets

Sodium chloride (tablet)

Exactly pre-weighed tablets for convenient and rapid preparation of sodium chloride solution.

Sodium chloride solution is generally used in many routine processes in Life Science laboratories, for instance preparation of salt solutions or composing of special buffer concoctions. In order to alleviate the effort involved, preparation of salt solutions using the ROTI®Fair salt tablets is most convenient.

Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving. For long-term storage, salt solution should be kept at +4 °C.

ROTI®Fair 0.9 % NaCl

for 100 ml/tablet, for biochemistry and molecular biology

For preparation of salt solutions and buffer concoctions.

0,9 % NaCl solution is prepared by dissolution of 1 tablet in 100 ml highly pure water respectively.

WGK 1

Prepared solution contains: 0.9 % NaCl, when prepared in deionized or distilled water.
For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

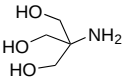
ROTI®Fair 0.9 % NaCl

for 1000 ml/tablet, for biochemistry and molecular biology

For preparation of salt solutions and buffer concoctions.

0,9 % NaCl solution is prepared by dissolution of 1 tablet in 1000 ml highly pure water respectively.



WGK 1

Prepared solution contains: 0.9 % NaCl, when prepared in deionized or distilled water.
For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

Endotoxins (greek ἔndo [endo]=inner, within; τοξίνη [toxin]=poison, toxic substance).
Largest subgroup of **pyrogens** (greek πψροσ [pyros]=fire; γενναν [gennan]=to produce).
The terms **endotoxin** and **pyrogen** are often used synonymously.

Lipopoly saccharides from the outer cell membrane of gram-negative bacteria or bluegreen algae. The pathological effects of **endotoxins** are microbial poisoning, septicaemia and lung disease. The lipid A contained in endotoxins is toxic to eukaryotic cells since it interacts with the cell membrane and affects the transcription of many proteins (e.g. tumour necrosis factor). It is, therefore, important to use reagents that are to a large degree free of endotoxins / pyrogens in the **cell culture**. This can be verified by older test methods such as induction of fever in rabbits, the LAL test (the haemolymph of the horseshoe crab *limulus polyphemus* coagulates in the presence of endotoxins) or by using modern and animal-friendly methods such as monocyte activation or ELISA.
1 E.U. (Endotoxin Unit) = 1 I.U. (International Unit) = 1 USP.U. (United States Pharmocopeia Unit)

1 E.U. = approx. 0,1 ng endotoxin

Cell Passage

S ready-to-use

ROTI®Cell DPBS/EDTA

CELLPURE® sterile, 0,02 % EDTA (Versene®), w/o Ca/Mg

Balanced salt solution with EDTA for cell culture.

EDTA, a chelator of divalent cations, is used combined with trypsin prior to passaging in order to solubilize adherent cells from the culture vessel surface into suspension. EDTA binds calcium and magnesium which aid in cell-cell adhesion, additionally allowing trypsin to more efficiently hydrolyze specific peptide bonds.
ROTI®Cell DPBS/EDTA may also be used directly without addition of trypsine for very gentle cell dissociation. Versene® is a trade-marked name of EDTA.

Cell Isolation

ROTI®Sep 1077 human

Lymphocyte separation medium, Polysucrose solution

Ready-to-use and sterile separation medium based on polysucrose 400, for efficient isolation of lymphocytes from human blood by density gradient centrifugation.
Density 1.077 g/ml.
Best alternative to Ficoll®.

- Optimised for isolation of lymphocytes from non-coagulated human whole blood
- Produces distinct, compact layers
- Results in high recovery rates of viable cells
- Maintains the representative ratio of B- to T lymphocytes
- May be directly applied to all protocols using Ficoll®

ROTI®Sep 1077 human excels due to the superior separation power, forming very distinct, easy to pipet, lymphocyte layers during centrifugation. The ready to use solution is very easy in handling, resulting in high cell recovery rates, while cell viability and the representative ratio of B- to T lymphocytes are maintained. Osmolality as well as pH value are strictly kept in the physiological range.
Suitable for application with human non-coagulated peripheral blood.
In all respective protocols originally using Ficoll® this reagent may be replaced by ROTI®Sep 1077 human without any adjustment.

S ready-to-use

ROTI®Sep 1077 human/tube

CELLPURE® sterile, ready-to-use, for density gradient centrifugation

Polysucrose based medium for separation of lymphocytes/PBMC from human whole blood. Density: 1,077 g/ml

Prefilled in 50 ml centrifugation tubes, 15 ml each.

With permeable membrane for easy pipetting of diluted blood.

15 ml prefilled in 50 ml tubes.
Long-term storage at approx. 4 °C recommended. Short-term storage at room temperature possible. Storage protected from light.

M ~400000 g/mol

Storage temperature: +4 °C

Ficoll® 400

for molecular biology and biochemistry

For density gradient centrifugation; ingredient of gel loading buffers. Non-ionic polymer of saccharose.

Ficoll® 400 is a hydrophilic copolymer of saccharose and epichlorohydrin, that readily solubilises in water and aqueous solutions. It may be solubilised at concentrations of up to 50 %, and is mainly used in the following applications: A) In hybridisation buffer acc. to Denhardt, Ficoll® 400 reduces non specific binding of labelled DNA to the filter membrane. B) In gel loading buffer it supports DNA application to agarose gels by increasing the density of the sample. C) In continuous or discontinuous density gradients, Ficoll® 400 is used as matrix for fractioning of cells (e.g. lymphocytes) or subcellular particles, also taking advantage of its ability to stabilise membrane coupled components and the functional as well as the morphological integrity of cells. Autoclavable at neutral pH.

Polysucrose 400

BioScience Grade, for molecular biology

For density gradient centrifugation during cell separation and isolation of cell organelles.

Nonionic, synthetic copolymer from sucrose and epichlorohydrin. Ficoll® derivative.

Solution of polysucrose 400 is used for separation of blood cells (mono nuclear cells, granulocytes, erythrocytes) via density gradient centrifugation, and for isolation of mononuclear cells from whole blood. Also well applicable for isolation of islets of Langerhans from pancreatic issue.

May be used as direct replacement for Ficoll® in common protocols.

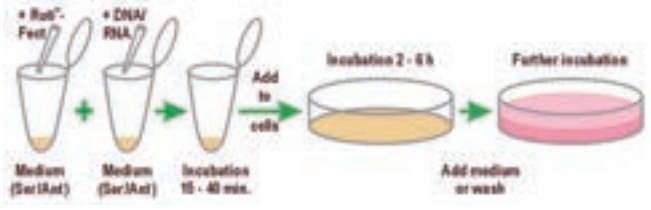
Transfection

ready-to-use

ROTI®Fect

CELLPURE® ready-to-use, for transfection



Reagent for liposoma-mediated transfection of eukaryotic cells.

ROTI®Fect is a liposome formulation of a polycationic lipid in combination with a neutral colipid. Compared to monocationic lipid formulations, ROTI®Fect has a higher efficiency with lower levels being required. Its excellent reproducibility in combination with its high level of efficiency reduced optimisation work to a minimum. Because of its low toxicity, a wide range of cell lines can be transfected efficiently.
An efficient triple-cotransfection using ROTI®Fect is described in Ufartes, Schlüter, Kaufluss and Seipp (2005) *Biospektrum* 4: 464-5.

- Highly efficient reproduction of DNA in mammal cells
- Excellent reproducibility
- High and wide operating plateau
- No inhibition through serum
- Low cell toxicity
- Successful with different cell lines
- Excellent transfection results

Successfully tested on a variety of cell types.

siRNA: CEM, COS-7, ES-D3,HeLa, HL60, LNCaP, OVCAR3, PC3, SW620
Primary cells: pAML, pHDF, pMEF, pRHC, pSMC
Cell lines: 143B, 293-T, A-293, A-431, AM-C6SC8, BHK, BV-2, C2C12, C6, CHO, CHO-DHFR, COS-1, COS-7, CRFK, Colo-205, DU-145, ECV-304, EMC, F98 (glioma), GD25-ß1, HBL 100, HCT-116, HCT-15, HEK293, HeLa, HeLa-S3, Hep-3B, Hep-G2, HOSE, HSG, HT-22, HT-29, HUVEC, JURKAT, LLC-PK1, LS174T, LoVo, MCF-7, MDCK, MeWo, MV3, NIH-3T3, NS20Y, OK, P815, PC3, PT-11, Rcho-1, SAOS, SH-SY5Y, SK-MEL-28, SKOV-3, SM10, SW-480, THP-1, tsA201, U87 (glioma), Vero 76, *et al.*

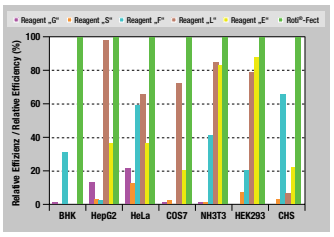


Figure:
Transfection of a variety of cell lines with ROTI®Fect and other commercially available transfectants.
Transfection was performed in 24wells using 0.25 µg DNA each, with 1.5 µl ROTI®Fect or acc. to instructions given by the manufacturers. Luciferase activity was measured 48 hours post transfection. Data of cells transfected with ROTI®Fect was set to 100 %.

Approx. 400 assays per ml in 24wells. Dependent on the cell line used.

Storage temperature: +4 °C

DEAE Dextran

for biochemistry

Transfection reagent

DEAE is the oldest transfection reagent known. The method of complexation of plasmid DNA with diethylaminoethyldextran has been published in 1968 by McCutchan. Positively charged DEAE binds negatively charged DNA to aggregates, which then bind to negtively charged surface structures of cell membranes. Uptake is done via endocytosis. This DEAE method needs only little amounts of DNA, while resulting in high transfection efficiency of up to 30 %. However, the cytotoxic effects caused by DEAE allow only transient transfections. The following cell lines are well transfectable: CV-1, BSC-1 and COS cells, and other stabile, insensitive cell lines.

Stock solution: 50 mg/ml in H_2O. Autoclave.

End concentration: 1 mg/ml (transfection for 30-90 min.) or 250 µg/ml (transfection for up to 8 h)

M ~500000 g/mol

ready-to-use

ROTI®Fect Plus

CELLPURE® ready-to-use, for transfection

Reagent for transfection of all eukaryotic cells in culture, particularly suited for hard-to-transfect cell lines.

Highly sophisticated transfection reagent for liposoma mediated transfection of eukaryotic cell lines and primary cells in culture. ROTI®Fect PLUS further reduces the toxic effects of transfection, making it a versatile tool for transfection of sensitive cell lines or primary cells. Based on this, ROTI®Fect PLUS is also especially recommended for transfection prior to *in vivo* analyses (siRNA-Assays, *in vivo* life microscopy, etc.), since the transfection stress is minimized, reducing stress dependent effects like the rate of apoptosis induced cells. Additionally, the stability of nucleic acid/lipid complexes is diminished in comparison with ROTI®Fect, therefore improving the release of nucleic acids in the cell.
Thus, the newly established liposoma formulation of ROTI®Fect PLUS guarantees gentle and highly efficient transfections, even when hard-to-transfect or particularly sensitive cell lines are handled.

- Particularly low cell toxicity
- Superior transfection efficiency with all cell lines
- Especially recommended for hard-to-transfect cell lines
- Particularly suited for use with primary cells
- Excellent reproducibility
- No serum inhibition

Successfully tested on a variety of cell types.

siRNA: 1BR3, HEK293, HeLa, LN-308, T98G. U87MG, UACC-257
Primary cells: 1BR3, 8VM, CGN, HMEC, HUVEC, PBMC, S15VM
Cell lines: 1BRneo, 143B, 293T, NSCLC, alphaTC1, B16-F10, BHK-21, C2C12, C6, CHO, CHO-K1, Colo205, COS-7, EVLC2, HaCaT, HAEC, HCT116, HEK293, HeLa, HepG2, Hep 3B, IMR32, Jurkat, Kelly, KG1, La1-5S, LN-308, M2-10B4, MDCK, MEF, MG-63, MIN6, MLEC32, mPAC, mpkCCD, N18TG2, N2a, N-Tera2, NG NIH-3T3, Panc-1, PC 12, Phi-NX, Raji, RAW264.7, RD, RF24, RGE, S2, S91, SMA-560, SK-N-BE, SW480, T98G, U-2 OS, Vero, *et al.*

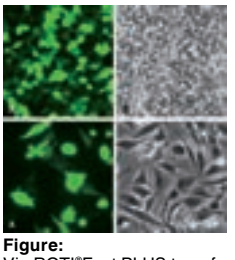

Figure:
Via ROTI®Fect PLUS transfected cells.**A:** Fluorescent light (520 nm), **B:** Standard light.
Above: COS7 cells (0.5 × 10^5 cells / cm^2 in 24-well).
Transfection after 24 h using 0.9 µg pCMV-GFP + 3.6 µl ROTI®Fect PLUS (ratio 1:4). Analysis after 48 h.
Below: BHK cells (0.2 × 10^5 cells / cm^2 in 24-well).
Transfection after 24 h using 0.3 µg pCMV-GFP + 1.2 µl ROTI®Fect PLUS (ratio 1:4). Analysis after 48 h.

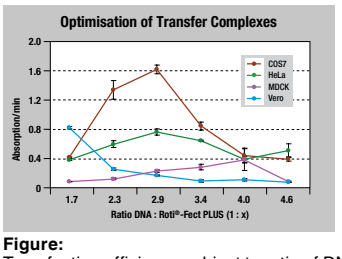

Figure:
Transfection efficiency subject to ratio of DNA to ROTI®Fect PLUS. For most cell lines, the optimised composition of transfection complex is 1:3 to 1:4.
Vero: 1.2 × 10^5 cells / cm^2; MDCK: 1.2 × 10^5 cells / cm^2; COS7: 5 × 10^4 cells / cm^2; HeLa: 1 × 10^5 cells / cm^2. Transfection with pCMV-LacZ 24 h after sawing in 48 wells in serum-free DMEM. Analysis (ONPG assay) after 48 h.

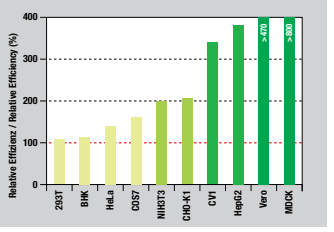

Figure:
Transfection efficiency of ROTI®Fect PLUS given in percentage. For standardisation, transfection efficiency of ROTI®Fect was set as reference (100 %).
Compared to ROTI®Fect, transfection efficiency achieved by ROTI®Fect PLUS is at least equivalent. For some cell lines known to be hard-to-transfect with ROTI®Fect, e.g. Vero, CV1, or CHO-K1 cells, ROTI®Fect PLUS achieves multiple enhancement of transfection efficiency.

Approx. 500 assays per ml in 24wells. Dependent on the cell line used.

Storage temperature: +4 °C

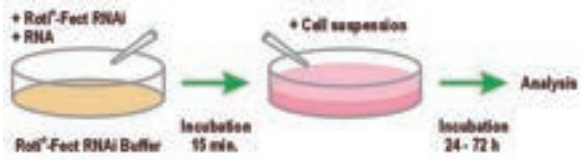
Instructions for use

can be found on the Internet next to the product description.



ready-to-use

ROTI®Fect RNAi Kit

CELLPURE® ready-to-use, for transfection

Reagent for transfection of mammalian cells with siRNA and miRNA, for efficient gene silencing.

New, powerful transfection reagent for liposoma mediated siRNA and miRNA transfection of all mammalian cells in culture. Liposoma formulation and enclosed buffer were specially established and designed for core parameters of RNAi: Most efficient quantitative endocytosis plus release of nucleic acids into the cytosol, without subsequent transport to the nucleus.
ROTI®Fect RNAi provides you with superior knockdown results, even using low amounts of RNA.Hereby, the ROTI®Fect technology guarantees minimisation of toxic effects during transfection, thus making these reagents suitable for very sensitive cell lines of primary cells.
The detailed instruction-for-use contains a standardised transfection protocol working via a definite RNA/liposoma ratio and providing good results starting with the very first assay - making elaborate optimisations of transfection obsolete. Evaluation of results is often possible after 48 hours, enabling two sequential assays per week.

- Optimised RNA release into the cytosol
- High levels of gene silencing with low RNA concentration
- Efficient knockdown after 48 hours already
- No elaborate optimisation necessary
- Very low cell toxicity
- Suitable for cell lines and primary cells
- Straightforward, efficient protocol for whole medium included

Successfully tested on a variety of cell types.

Primary cells: MCS, M1
Cell lines: A549, 3T3-L1, B16F10, CHO-K1, H441, HT1080, HeLa, HeLa-KB, HepG2

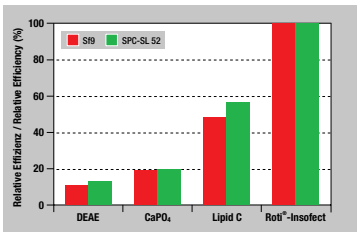
ready-to-use

ROTI®Insectofect

CELLPURE® ready-to-use, for transfection



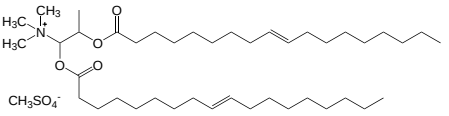
For transfection of insect cells in culture.

Recombinant proteins at a large scale can be manufactured under simple conditions in insect cell cultures with the non-human pathogenic baculovirus system and a simple scale-up procedure. ROTI®Insectofect enables best transfection results with a wide spectrum of activity and very low toxicity.
ROTI®Insectofect consists of an aqueous solution of polycationic lipids and was specially developed for liposome mediated transfection of insect cells. Because of its special formulation, it has a much higher efficiency than standard transfectants, such as calcium phosphate or DEAE.

- No serum inhibition
- Superior transfection efficiency
- High and wide operating plateau
- Excellent reproducibility
- Very low cell toxicity
- Quick and easy handling

Successfully tested on a variety of cell types.

Ag55, Anso, As43, Bm5, Cpp512, IPLB-SF21, LD652, Mos-20, S2, SF9, SL2.
Ideal for transfection of SF9, SL-3 and SPC-SL 52 cells.



The **figure** shows evaluation of an X-Gal assay after transfection of β-Galactosidase-genes in SF9 and SPC-SL 52 cells.

Cell Analysis

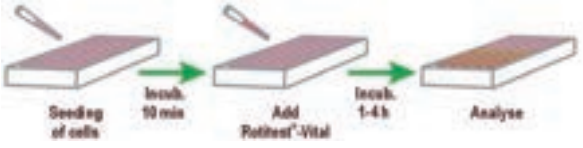
Vitality Assay & Cell Counting

ROTITEST®Vital

Cell proliferation test solution

Rapid and simple test system for non-radioactive quantitation of proliferating cells. Also well suitable for cytotoxicity assays.

Optimum replacement for MTT:



- Cells keep on being vital
- Most simple handling
- One-component-system without radioactivity
- For adherent and suspension cells
- Photometric result in 1 to 4 hours
- Strong correlation between absorbance and cell number
- Suitable for every culture media

S ready-to-use

ROTITEST®Vital

ROTITEST® Bio Analysis, sterile, ready-to-use

Colorimetric test solution for evaluation of cell proliferation and -viability. Non toxic.

Mechanism

Sensitivity of the tetrazolium salt used is higher than that known for standard reagents such as MTT, XTT, MTS, or WST-1. Results were shown to be of highly stringent correlation with [^{3}H]-thymidine incorporation assays, therefore representing viability as well as proliferation status of the cells (Tominaga *et al.*, *Anal. Commun.* 1999 (36) 47-50). In all living cells, NADH and NADPH are formed by the respiratory chain. ROTITEST®vital is based on the (colourless) WST-8, which functions as acceptor for the NADH/NADPH dehydrogenase while being reduced to (coloured) formazane during the process.

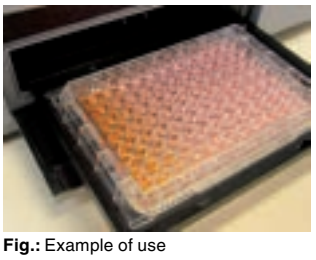


Fig.: Example of use

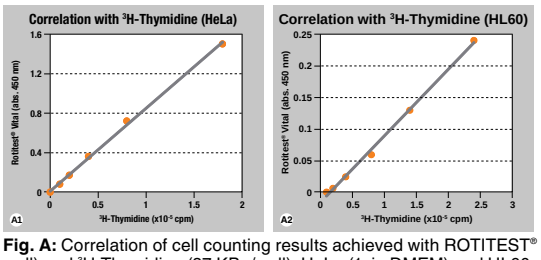
Directions for use

The test solution is added directly to the cultivated cells in 96wells. During incubation for few hours, a water-soluble formazan dye is produced by viable cells, and is released into the surrounding medium. The resulting orange colour is measured photometrically (approx. 450 nm). Also suitable for culture media containing phenol red.

Each package contains simple-to-follow instructions-for-use.



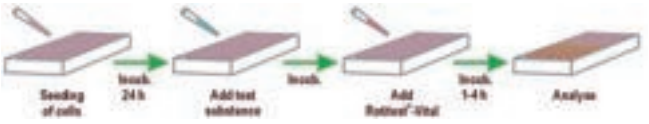


Fig. A: Correlation of cell counting results achieved with ROTITEST® Vital (10 µl/well) and ^{3}H-Thymidine (37 KBq/well). HeLa (1, in DMEM) and HL60 cells (2, in MEM).

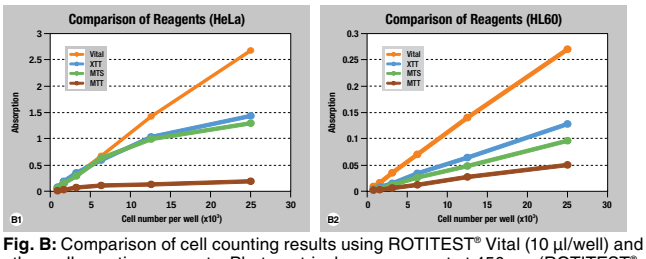

Fig. B: Comparison of cell counting results using ROTITEST® Vital (10 µl/well) and other cell counting reagents. Photometrical measurement at 450 nm (ROTITEST® Vital, XTT), 490 nm (MTS), and 570 nm (MTT). HeLa (1, in DMEM) and HL60 cells (2, in MEM).

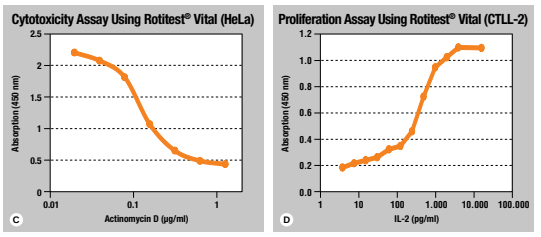

Fig. C: Measurement of cytotoxic effects of actinomycin D (exposition 24 h) on HeLa cells (in DMEM), assayed with ROTITEST® Vital (10 µl/well).
Fig. D: Proliferation assay on CTLL-2 cells (in RPMI) under influence of humane IL-2 (exposition 72 h), using ROTITEST® Vital (10 µl/well).

Stable at ambient temperature. Very stabile when being cooled. Store protected from light. Do not freeze.

1 ml is sufficient for enumeration of 100 cell samples.

Storage temperature: +4 °C

Apoptosis Assay

ROTITEST®Annexin V

Rapid and simple detection system of apoptotic cells, with simultaneous differentiation of necrotic cells.

ready-to-use

ROTITEST®Annexin V

ROTITEST® Bio Analysis, ready-to-use

For detection and enumeration of apoptotic cells and simultaneous differentiation from necrosis.

Mechanism

During the first stages of apoptosis, phosphatidylserine (PS) is translocated from the inner membran layer to the outer surface of the cell. The ROTITEST®Annexin V Kit uses the Ca^{2+} dependent binding efficiency of Annexin V to PS in order to label cells with damaged cell membranes. Additionally, propidium iodide is used to counter stain nuclei of cells with opened membranes, hence those which undergo necrotic degradation.
Thus, cells with yellow-green membrane staining only can be identified as apoptotic, while double stained cells (with yellow-green membranes plus orange-red nuclei) are classified as necrotic. Analysis is performed via flow cytometry or fluorescence microscopy.

- Simple, rapid application
- For adherent and suspension cells
- For cultured and primary cells (also for yeast cells)
- Discriminating between apoptotic and necrotic cells
- Result in approx. 30 minutes

Each package contains simple-to-follow instructions-for-use.

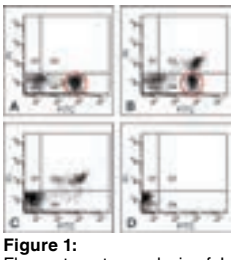

Figure 1:
Flow cytometry analysis of Jurkat cells. Assayed using 5 × 10^5 cells in 500 µl Annexin binding buffer, 25 µl Annexin V-FITC conjugate and 25 µl propidium iodide solution, 15 min. RT.
FITC-A: FITC staining (binding of Annexin-FITC conjugate), PE-A: Propidium iodide staining
A,B) Cells after induction of apoptosis by Staurosporin, under pure annexin-FITC staining (A) or under annexin-FITC / PI staining (B), respectively. C,D) Uninduced control cells under annexin-FITC / PI staining (C) and without staining (D), respectively.
Due to the binding of Annexin V to PS on the outer membrane surface, apoptotic cells are Annexin-FITC positive, but PI negative (Q4, circle). Q3 displays healthy cells (neg/neg), Q2 necrotic cells (Annexin-FITC pos and PI pos). Cells in Q1 (PI pos/ Annexin-FITC neg) are dead, non-apoptotic cells.

The kit contains

Annexin V-FITC conjugate, propidium iodide solution, Annexin V binding buffer, detailed instructions-for-use.
Excluding the columns, contents of this Kit may not be bought separately.

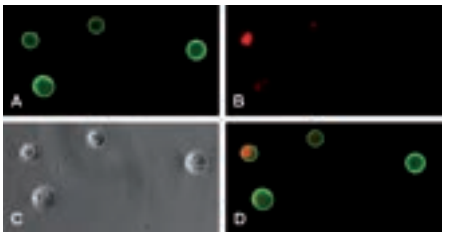

Figure 2:
Fluorescence microscopic analysis of Jurkat cells following induction of apoptosis by staurosporine. Assayed using 10^5 cells in 100 µl Annexin binding buffer, 5 µl Annexin V-FITC conjugate and 5 µl propidium iodide solution, 15 min. RT.
A) FITC fluorescence (green), B) propidium iodide fluorescence (red), C) bright field image, D) composite image. Apoptotic cells are FITC positive, PI negative. FITC pos/PI pos cells may be classified as being necrotic. Healthy cells are FITC/ PI neg.

Store protected from light.

1 set is sufficient for analysis of 50 samples of 10^5 cells each

Storage temperature: +4 °C

Hygiene Monitoring

In recent years, the prevention of infection, environmental-, residential- and communal hygiene have become very important even in day-to-day life. Today, hygiene monitoring equipment is installed, required and, in some cases, already prescribed by law in institutions, facilities and a variety of other areas. These include hospitals, rehabilitation clinics, ambulance services, blood donor services, drinking water supply systems, public swimming baths, sports facilities, schools, public offices, companies, hotels, gastronomy and canteens, food retailing, food-producing companies and ports.

The main emphasis of hygiene monitoring is on checking the results of cleaning and decontamination processes, e.g. in-house monitoring of food production and processing, determining the hygiene status of kitchens, sports facilities and sanitary facilities, checking the contamination status of air conditioning systems for the protection of employees and customers, and raising awareness of hygiene problems during training.

Carl ROTH offers a wide range of hygiene monitoring products which are quick and easy to use even for novices.

- Easy and safe handling – also for laymen
- Simple interpretation
- Storage and transport at room temperature
- Suitable for hygiene monitoring and contamination survey wherever needed, for schooling and student's courses

Hygiene (greek ὑγιεινή τέχνη [hygieiné téchne] = conducive to health [art])

The word hygiene" is a collective term applied to all measures for the prevention of infectious diseases and the spread thereof as well as for the preservation of health.
Hygiene is often used incorrectly as a synonym for cleanliness, which, however, represents only a small part of hygiene. On the contrary, hygiene is the science of applying measures for the protection of health.

ready-to-use

ROTITEST®Protein

ROTITEST® Bio Analysis, ready-to-use

Protein detection system for rapid control of surfaces after the cleaning process. Test result in max. 2 mins.
The ROTITEST® swab tests are fast and simple test systems for the detection of impurities on surfaces.

ROTITEST®Protein is **not** suitable for the detection of virus contamination.

- Easy and safe to handle – even for laymen
- Definite interpretation through colour shift
- Storage and transport at room temperature
- Suitable for testing all surfaces

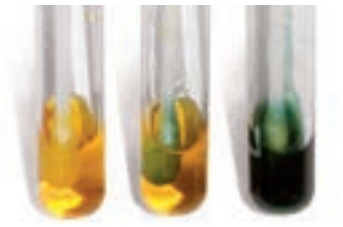

Figure:
Colour shift to dark green-blue caused by presence of proteins.

Rapid and simple test system for detection of protein contamination on surfaces. Optimal for hygiene control and testing of cleaning efficiency of table tops, sales counters, handles etc.
This ROTITEST®Protein is very easy to apply: Using the integrated swab the respective surface is probed; pressing of the lid automatically drips the detection solution onto the swab head. Interpretation is simple due to the distinct colour shift from yellow-orange to dark green-blue. Results are available in 2 mins. maximum.

Each package contains simple-to-follow instructions-for-use.

Please note

The ROTITEST® systems do **not provide quantitative information** about the level of contamination.

Suitable for testing of any surface. Store at 15–25 °C protected from light. Do not freeze.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Orion Clean Card® PRO – Makes cleanliness visible

The Clean Card® PRO of amfora health care detects any soiling that contains protein or substances similar to protein, such as allergen proteins as well as surfactants from residual cleaning detergent or disinfectant agent on work surfaces, equipment and containers that look clean to the naked eye.This means cleaning practices can be quickly optimised and risks can be minimised – as outlined in the HACCP concept.

- **Fast** – results in 30 seconds
- **Straightforward** – clear analysis thanks to visible colour change
- **User-friendly** – no additional devices required
- Safety and high standard confirmed in internal tests for compliance with legal requirements of HACCP, good hygiene practice or internal QA/hygiene plans
- **Evidence from approx. 50 µg protein/100 cm²**
- Certified and proven in practice: Recommended by Bundesverband der Lebensmittelkontrolleure (German Association of Food Regulators)
- Suitable for use in many sectors, e.g. community catering, restaurants and cafés, hotels, cleaning services, food industry businesses such as butchers and bakers, suppliers, haulage companies, for hygiene training courses to sensitise staff and for those working in hygiene, quality management and quality assurance, and much more.

The surface is wetted and then wiped with the Clean Card® PRO. After 30 seconds, the colour of the test section is compared against the colours in the picture card provided and the result is recorded.
A green or blue colour indicates the surface is contaminated with residual protein. The higher the level of protein detected, the darker the colouration of the card.
The Clean Card® PRO test record (Art. No. 0076.1) can be used to maintain a clear overview of the results.

Clean Card® PRO

Protein quick test, Cleaning control

Clean Card® PRO is **not** suitable for the detection of virus contamination.

ready-to-use

Clean Card® PRO Pack

Orion Clean Card® for hygiene control

amfora health care.

For rapid detection of protein contamination on surfaces after the cleaning process.

The Clean Card® PRO detects any soiling that contains protein or substances similar to protein, such as allergen proteins as well as surfactants from residual cleaning detergent or disinfectant agent on work surfaces, equipment and containers that look clean to the naked eye.This means cleaning practices can be quickly optimised and risks can be minimised – as outlined in the HACCP concept.

- **Fast** – results in 30 seconds

Test protocol Orion Clean Card® PRO

DIN A4 block with 50 pre-printed forms for easy and reproducible documentation of test results.

The Clean Card® PRO detects all protein-containing and protein-like contaminants such as allergen proteins and surfactants from cleaning or disinfectant residues on optically clean work surfaces, equipment and containers. This enables cleaning measures to be optimised quickly and risks to be minimised – in line with the HACCP concept.
With the help of the Clean Card® PRO test protocol, the results can be clearly recorded.

Directions for use

For use with the Clean Card® PRO Starter Kit (Order No. 0071.1) and the Clean Card® PRO Pack refill (Order No. 0072.1).

ATP Measurement with a System: Lumitester and LuciPac®

Lumitester SMART

Easy-to-use, lightweight luminometer for ATP measurement. For reliable monitoring of liquids, dry and wet surfaces as part of hygiene control in the manufacturing sector, in the foodstuffs and animal feed sector, in patients- and health care, in gastronomy and trade, in training and in many other areas.
Lumitester SMART is **not** suitable for the detection of virus contamination.

- Lightweight and easy-to-use
- Fast and easy handling
- Highly sensitive, precise measurement of ATP, ADP and AMP
- Ready for use after 8 seconds
- Auto-calibration
- Definition of own limit values is possible
- Storage of the measurement results in the cloud
- Date and time internal to the device

General properties:

- Hygiene monitoring in three simple steps
- Data visualization via App
- Access from anywhere with cloud storage

Mechanism

ATP (adenosine triphosphate), ADP (adenosine diphosphate) and the more stable form AMP (adenosine monophosphate) are found in all living cells and, therefore, provide an exact and quantitative marker for the presence of bacteria, fungi or food residue.
An enzyme/substrate complex in the LuciPac® sampling tube reacts with ATP, ADP *and* AMP to release bioluminescence whose intensity correlates directly with the quantity of ATP/ADP/AMP present. The Lumitester SMART fully converts this bioluminescence into a measurement result and is, therefore, the most sensitive measuring system available today. Thus, **liquids** and **surfaces** can be quickly and easily tested for contamination by foodstuffs and microorganisms using the Lumitester SMART and the LuciPac® sampling pen. Within approximately 30 seconds, the Lumitester SMART can provide information on hygiene status or the efficiency of cleaning and disinfection procedures.
The system is easy and safe to operate, even by non-professionals. Simply insert the sampling tube and close the unit. Then press the *Enter* button, and the measurement result will be displayed within 10 seconds.

Technical specifications:

Art. No.	**1E37.1**
Measurement duration	10 s
Display type	Organic-LED-Display
Port	USB, Bluetooth LE (Ver. 4.1)
Temperature range	5 to 40 °C
Unit of measurement	RLU
Data memory	2000 Analyses
Power supply	2 alkaline batteries (AA)
Weight	255 g
L x W x H	176 x 65 x 176 mm
Additional info	Date and time internal to the device

Suitable for use with LuciPac®Pen Aqua (Art. No. NC58) and LuciPac®A3 Aqua (Art. No. 1ENK) for monitoring liquids or with LuciPac®Pen (Art. No. NC59) and LuciPac®A3 (Art. No. 1ENH) for the analysis of surfaces.
Delivery incl. 2 alkaline batteries (AA), 3 cleaning brushes, USB-Cable, strap, quick guide
Please order separately: LuciPac®Pen Aqua (Order No.No. NC58), LuciPac®Pen (Order No. NC59), LuciPac®A3 Aqua (Order No. 1ENK), LuciPac®A3 (Order No. 1ENH) and Lumitester LED Test Stick (Order No. NC60.1).

Lumitester SMART

Kikkoman.

Connecting the device to a smartphone, tablet and/or PC allows measurement data to be stored in the cloud for analysis, graphing and sharing across multiple smart devices.

Please note

Lumitester SMART is **not** suitable for the detection of virus contamination.

Type	Art. No.	Pack Qty.	€
Lumitester SMART	**1E37.1**	1 unit(s)	2.418,75

Suitable for monitoring of circulating water in **evaporative cooling systems** by measuring ATP (VDI 2047).

Lumitester LED Control Swab

The Lumitester LED control swab, once charged, produces a stable, exactly defined and calibrate light signal that can be used check the functioning of the Lumitester PD20 or PD30. The product illustration shows the LED control swab (back) in comparison with a LuciPac® Pen sampling tube.
Immediately before checking the Lumitester, connect the LED control swab to the power supply using the supplied charging cable and charge for 30 to 60 seconds. Then disconnect the LED control swab from the power supply and insert the LuciPac® Pen sampling tube into the cleaned measuring chamber of the Lumitester. The luminous energy emission is measured by pressing the *Enter* button.

Comparing the measurement result with the printed information indicates the condition of the unit. If the nominal value of 80 to 120 % is achieved, the Lumitester is in perfect working order. If not, please contact us to have the Lumitester and control swab recalibrated.

S ready-to-use

LuciPac® Pen

sterile, for hygiene control of surfaces

Kikkoman.

For testing for the contamination of surfaces by ATP/AMP measurement using Lumitester PD20 and PD30.

- Quick and easy sampling
- Easy and quick measurement within seconds
- Sensitive and reproducible measurement

Using the LuciPac® Pen sampling rods, surfaces can be tested easily and quickly for contamination by bacteria, fungi and food residue. Organic contamination is indicated by the presence of ATP or AMP on these surfaces. An enzyme/substrate complex in the LuciPac® Pen sampling tube reacts with ATP and AMP to produce bioluminescence whose intensity correlates directly with the amount of ATP/AMP present. The Lumitester PD20 or PD30 then determines the bioluminescence as a direct measure of original contamination.

The unit is easy to operate, even by non-professionals. Just moisten the swab and swipe it across the surface. Then put the swab back into the tube and push it down into the reaction chamber. Shake the tube until the reagents are released and measure the bioluminescence in the Lumitester PD20 or PD30.

20 LuciPac® Pens each are packed in a resealable aluminium bag. Store in a dark place.

Storage temperature: +4 °C

WGK 1

Art. No.	Pack Qty.	Pack.	€
NC59.1	20 unit(s)	aluminium bag	123,65
NC59.2	100 unit(s)	aluminium bag	547,20

LuciPac®Pen

For the reliable monitoring of dry and moist surfaces as well as solutions in the manufacturing industry, in the food and feed sector, in patient care and nursing, in gastronomy and trade, in training and in many other areas.

Please note

LuciPac®Pen is **not** suitable for the detection of virus contamination.

S ready-to-use

LuciPac® Pen Aqua

sterile, for hygiene control of liquids

Kikkoman.

For testing for the contamination of liquids by ATP/AMP measurement using Lumitester PD20 and PD30.

- Quick and easy sampling
- Exact sample volumes of 150 µl
- Easy and quick measurement within seconds
- Sensitive and reproducible measurement

Using the LuciPac® Pen Aqua sampling rods, liquids can be quickly and easily examined for organic contamination. The organic contamination of liquids, e.g. by bacteria, is indicated by the presence of ATP or AMP in these samples. An enzyme/substrate complex in the LuciPac® Pen Aqua sampling tube reacts with ATP and AMP to produce bioluminescence whose intensity correlates directly with the amount of ATP/AMP present. The Lumitester PD20 or PD30 then determines the bioluminescence as a direct measure of original contamination. The sampling comb ensures precise sampling of 150 µl with a deviation of ≤2 %. Test results are, therefore, highly reproducible and comparable.

The unit is easy to operate, even by non-professionals. Just immerse the sampling comb into the liquid. Then put the comb back into the tube and push it down into the reaction chamber. Shake the tube until the reagents are released and measure the bioluminescence in the Lumitester PD20 or PD30.

20 LuciPac® Pens Aqua each are packed in a resealable aluminium bag. Store in a dark place.

Storage temperature: +4 °C

NEW / +

S ready-to-use

LuciPac®A3

sterile, for hygiene control of surfaces

Kikkoman.

For testing for the contamination of surfaces by ATP/ADP/AMP measurement using Lumitester PD30 and SMART.

Directions for use

Remove the cotton swab (green holder) from the tube. Moisten the cotton swab with tap water if the surface is completely dry.
Wipe the object/the surface. An area of approx. 10 x 10 cm^2 is recommended for optimum results.
Put the cotton swab back into the tube. Then press the stick down to open the reaction capsule.
Shake the LuciPac®A3 horizontally several times so that all the liquid flows into the lower reaction capsule.
Insert the entire LuciPac®A3 into the measuring chamber of the Lumitester PD30 or Smart and close the measuring chamber cover.
Press the ENTER key on the control panel to start the measurement process. The measurement results are displayed after 10 seconds.
Remove the sleeve of the LuciPac®A3 from the measuring chamber.

20 LuciPac®A3 each are packed in a resealable aluminium bag. Store in a dark place.

Storage temperature: +4 °C

LuciPac®A3

For the reliable monitoring of dry and moist surfaces as well as solutions in the manufacturing industry, in the food and feed sector, in patient care and nursing, in gastronomy and trade, in training and in many other areas.

All the advantages at a glance:

- Quick and easy sampling
- Simple and fast measurement within seconds
- Sensitive and reproducible measurement
- Measurement of all forms - ATP, ADP and AMP

Please note

LuciPac®A3 is **not** suitable for the detection of virus contamination.

Why A3 assay (ATP+ADP+AMP)?

A3 detects ATP+ADP+AMP offering higher sensitivity to find micro-organisms and biofilms that others miss. Just as fast and easy to use as conventional tests, but its advanced chemistry produces superior detection to uncover contaminants that you may be missing.

Test paper for efficiency monitoring of milk pasteurisation.

Directions for use

The ROTITEST®Phosphatase paper, impregnated with detection reagent, is cut at one end and allowed to soak by dipping it into a sample of the milk to be analysed. During incubation at 37 °C for 2 hours in maximum, a yellow colouring shows presence of Alkalic Phosphatase, hence the non-efficient pasteurisation of the milk.

Sensitivity of the phosphatase test system is 0.5 % raw milk in pasteurised milk. This test system does not provide quantitative data.

One package contains 10 single welded test papers, impregnated with detection reagent.

Storage temperature: +4 °C

SurfACE™ Sampling Solutions with dry and moistened cellulose sponges

Easy-to-use, sterile specimen collection and surface sampling kits for quality control and identification of hazards at critical control points.

SurfACE™ Sponge-Sticks

Sponge-Stick SurfACE™

For environmental surfaces to collect and ship microbial samples.

All the advantages at a glance:

- 3″ x 1.5″ (7.5 x 3.5 cm) biocide-free cellulose sponge
- Unique, quick sponge-release handle for fast and convenient sponge release
- Thumb stop in-handle included to avoid accidental sponge contact
- No gloves needed for different sampling sites
- Perfectly suited to sample in gaps, drains and pipes
- Dry or pre-moistened with 10 ml buffer
- Bags can be opened easily with attached pull tabs
- Label area for sample identification
- Irradiated for proven sterility

Directions for use

The Romer Labs Sponge-Stick is a 3″ x 1.5″ (7.5 cm x 3.5 cm) compressed cellulose sponge attached to a quick-release handle, pre-moistened with 10 ml buffer of choice and individually packaged in a sampling bag (Twirl-Tie™). The quick-release handle provides an extra level of convenience and reliability. It is designed to release the sponge into the sample bag after sample collection, allowing only the sponge to be returned to the laboratory. Unnecessary parts that could interfere with sample processing are therefore eliminated.

Application

BPW (Buffered Peptone Water): This is a non-selective pre-enrichment medium that enhances the revival of damaged cells.
LB (Letheen Bouillon): A nutrient-rich medium containing lecithin and Tween 80 as neutralisers. This medium can be used to test the effectiveness of hygiene treatment.
DE (Dey-Engley Neutralising Medium): Neutralises bactericidal and bacteriostatic effects of disinfectants. It contains additional nutrients that promote the recovery and growth of microorganisms.
NB (Neutralisation Buffer): Buffer that neutralises the effects of chlorine and quaternary ammonium compounds. Can be used on disinfected surfaces.

Available moistening buffers:

Buffer	Application
BPW (Buffered Peptone Water)	pre-enrichment medium
	for isolating bacteria and pathogens from foods
	facilitate resuscitation of stressed cells
DE (Dey-Engley neutralizing broth)	assists in the recovery of microorganisms
	neutralizes the bactericidal and bacteriostatic effects of sanitizing agents
	contains nutritive agents that aid in recovering and promoting the growth of microorganisms
	Bromocresol purple as a colorimetric indicator
LB (Letheen Broth)	highly nutritional medium that contains lecithin and Tween 80
	for testing the efficacy of sanitizing protocols
	as lecithin neutralizes quaternary ammonium compounds
	Tween 80 neutralizes phenols, hexachlorophene and formalin
NB (Neutralizing Buffer)	eliminates the effect of chlorine and quaternary ammonium compounds
	buffer assists in the recovery of microorganisms in samples taken from surfaces exposed to sanitizing agents
	different color from DE neutralizing broth

SurfACE™ Fabric swabs

For environmental surfaces to collect and ship microbial samples.

All the advantages at a glance:

- 28 x 32 cm blue biocide-free fabric swab (swab cloth)
- Pre-moistened with 10 ml buffer
- In 55 oz.; 7.5 x 12" (19 x 30 cm) Twirl-Tie™ bag
- Bags can be opened easily with attached pull-tabs
- Label area for sample identification
- Irradiated for proven sterility

Directions for use

Romer Labs fabric swabs, also known also swab cloths, are pre-moistened with 10 ml buffer. The cloth is a blue, biocide-free, non-woven, wood-pulp/polyester fabric, measuring at 28 x 32 cm, folded twice and placed in a 55 oz., 7.5 x 12″ (19 x 30 cm) Twirl-Tie™ bag. Bags can be opened easily with the attached pull-tabs and include a label area for sample identification. Like all microbial sampling products, they are irradiated for proven sterility.

Application

NB (Neutralisation Buffer): Buffer that neutralises the effects of chlorine and quaternary ammonium compounds. Can be used on disinfected surfaces.

Swab Tests

S ready-to-use

ROTITEST®Listeria

ROTITEST® Bio Analysis, sterile, ready-to-use

Detection system for exclusion, or affirmation, of contamination by listeriae.

ROTITEST® swab tests are fast and simple test systems for the detection of impurities on surfaces.

- Easy and safe to handle – even for laymen
- Definite interpretation through colour shift
- Storage and transport at room temperature
- Suitable for testing all surfaces

Figure:
Colour shift to black caused by presence of listeria.

Simple test system for detection, or exclusion, of listeriae contamination on surfaces. Optimal for control and minimisation of the contamination risk caused by *Listeria ssp.*, particularly *L. monocytogenes*.
This ROTITEST®Listeria is very easy to apply: Using the integrated swab the respective surface is probed and the swab is firmly pressed into the sterile nutrient medium. After incubation for 24–48 hours (37 °C) a distinct blackening of the medium indicates the presence of listeriae, hence the contamination of the respective surface.

Each package contains simple-to-follow instructions-for-use. Note: This test system only allows exclusion, or affirmation, of a listeriae contamination per se. Quantitation is not possible.

Please note

The ROTITEST® systems do **not provide quantitative information** about the level of contamination.

Suitable for testing of any surface. Store at 15–25 °C. Do not freeze.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	€
4805.1	25 unit(s)	192,45

Please note:

The ROTITEST® systems provide **non-quantitative data only**, and aren't equipped to measure any contamination magnitude.

S ready-to-use

ROTITEST®Coliform

ROTITEST® Bio Analysis, sterile, ready-to-use

Detection system for exclusion, or affirmation, of contamination by coliforms.

ROTITEST® swab tests are fast and simple test systems for the detection of impurities on surfaces.

- Easy and safe to handle – even for laymen
- Definite interpretation through colour shift
- Storage and transport at room temperature
- Suitable for testing all surfaces

Figure:
Colour shift to yellow-orange caused by presence of coliforms.
Gas formation hints to presence of *E. coli*.

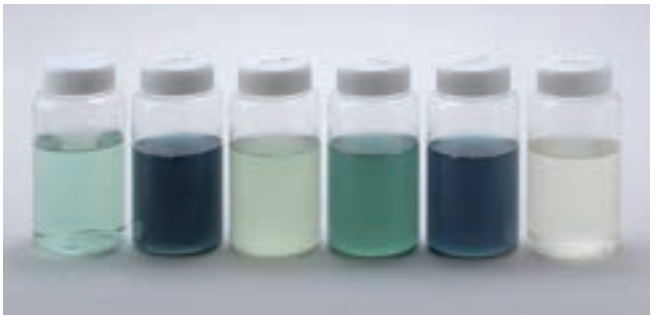
Simple test system for detection, or exclusion, of coliform contamination on surfaces. Optimal for hygiene monitoring and for minimisation of the contamination risk caused by coliforms in general., particularly *E. coli*.
This ROTITEST®Coliform is very easy to apply: Using the integrated swab the respective surface is probed and the swab is firmly pressed into the sterile nutrient medium. After incubation for 18–24 hours (37 °C) a distinct colour shift of the medium from purple to yellow indicates the presence of coliforms, hence the contamination of the respective surface.

Each package contains simple-to-follow instructions-for-use. Note: This test system only allows exclusion, or affirmation, of a coliform contamination per se. Quantitation is not possible.

Please note

The ROTITEST® systems do **not provide quantitative information** about the level of contamination.

Suitable for testing of any surface. Store at 15–25 °C. Do not freeze.



Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

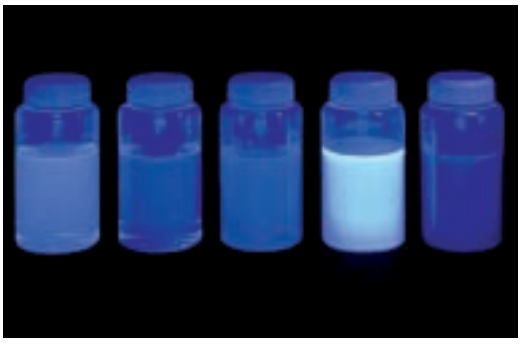
4806.1	25 unit(s)	cardboard	192,45

EC Blue System

For qualitative and quantitative detection of Coliforms, and *E. coli* in particular, in water.



EC Blue system

- Fast – results in just 24 hours
- Simple – easy to handle, even by non-professionals
- Safe – easy-to-interpret colour reaction
- Sensitive – 1 cfu/10 ml detection limit
- Efficient – simultaneous analysis of coliforms and *E. coli*
- Also suitable for chlorinated and turbid water

Quick and safe process for the analysis of coliform bacteria in general, and *E. coli* specifically in water.

The test is also suitable for analysis of turbid water samples and water samples containing suspended matter. Bacteria stressed by chlorinated water can generally also be verified.
The EC Blue system saves time and preliminary work because the reagent mixture is provided in sterile test bottles for direct use.
The presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light (see EC-Blue Mini UV lamp Art. No. KK49.1). Approximately 95 % of all *E. coli* strains produce the enzyme β-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.
The EC Blue Comparator for 10 ml and 100 ml (Art. No. 0349) is available for the comparison of own samples with a slightly positive control. Quantification is possible using EC Blue Quant/MPN (Art. No. 0199.1).

S ready-to-use

EC Blue 100P

sterile, ready-to-use, for water analysis

NISSUI Pharmaceutical.

For qualitative and quantitative analysis of coliforms and *E. coli* in water.

Pour 100 ml of the test water into a sterile container and dissolve the contents of a single-dose sachet of EC Blue 100P powder in it. The formation of a blue to blue-green colour after incubation at 35 °C indicates the presence of coliform bacteria in the water. This colour change is due to an enzymatic colour reaction of the coliform-specific galactosidase with the chromogenic substrate X-Gal.

Dissolve a single-dose sachet of analysis reagent in 100 ml of test water. Store protected from light.

WGK 1

Type	Art. No.	Pack Qty.	€
EC Blue 100P	**0202.1**	100 unit(s)	547,20

EC Blue Mini UV lamp

Small, handy UV lamp for quick and simple detection of *E. coli* bacteria in EC Blue assays.

The presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light. Approximately 95 % of all *E. coli* strains produce the enzyme β-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.

Technical specifications:

EC Blue Quant/MPN

For fast and easy quantification of coliform bacteria and *E.coli* as MPN test (**M**ost **P**robable **N**umber), e.g. according to DIN EN ISO 9308-2:2014-06. Optimised for use with EC Blue 100 and 100P. Detection limit: 1 cfu/100 ml for coliforms and *E. coli*.

- Set of 18 EC BlueQuant/MPN chambers incl. lid
- Reproducible, precise results
- Detection limit 1 cfu/100 ml
- No pre-dilution required
- Test result after 24 hours
- Simultaneous quantitation of coliforms and *E. coli*
- Also suitable for chlorinated and turbid water

The unique, innovative design of the EC BlueQuant/MPN allows rapid and reliable processing of MPN tests – simple to operate and without any additional equipment, except an incubator. The method is based on the standardised MPN method that uses at least three different dilution levels in increments of 10 and 5 compartments per dilution. Testing with the EC BlueQuant/MPN does not require a series of dilutions. When pouring the mixture, due to the special layout, the compartments are filled in such a way as to ensure correct serial dilution. After incubating the sample for 24 hours at about 35 °C, the result can be read off the device and converted to cfu/ml using ISO standard tables (e.g. DIN EN ISO 9308-2:2014-06).

Presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light (see EC-Blue Mini UV lamp Art. No. KK49.1). Approximately 95 % of all *E. coli* strains produce the enzyme ß-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.

Delivery incl. lids.

MPN tests – easier than ever with EC BlueQuant

Application:

1. Mix the water sample (100 ml) with the EC Blue 100 / 100P medium.
2. Pour the mixture into the EC BlueQuant tool. The sample is distributed evenly in the dilution chambers (please ensure horizontal / horizontal substrate).
3. Check that all dilution chambers are filled. Close with lid and incubate the sample at 35 ±2 °C for 24 hours.
4. After the incubation period coliforms show the typical blue coloration, *E. coli* contaminated samples shine under UV light (366 nm).

CASO Broth

Ph. Eur., USP, ISO 10273, for microbiology

For the cultivation of fastidious and undemanding microorganisms.

Broth medium A (Ph. Eur. 6.0) · Soy Peptone Broth · TSB Broth · Tryptic Soy Broth · Casein Soya Bean Digest Broth (Ph. Eur. 6.3, 7.0, 8.0 and 9.0)

CASO Broth is a medium very rich in nutrients for genral use in micro-biological labroratories. It supports the abundant growth of fastidious organisms such as pneumococci, streptococci, Neisseriae etc.

The medium is used frequentl in many procedures of diagnostic research or microbiology. For example, it is used for the isolation and sensitivity testing of all types of pathogens.
Containing two peptones as rich nitrogen sources, obtained by the enzymatic hydrolysis of Casein and Soy proteins, this medium supports growth of a great variety of microorganisms, inclusing fastidious aerobes and anaerobes. Soy peptone also contains natural sugars which promote bacterial growth.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Fraser Half Broth

ISO 11290, for microbiology

Enrichment medium for detection and isolation of *Listeria* in foods and environmental samples.

Fraser Half Broth is used for the selective enrichment medium and enumeration of Listeria monocytogenes and other Listeria species in all food types, including milk and diary products, and environmental samples.

Fraser Half Broth is a modification of Listeria Fraser Broth in which the nalidixic acid and acriflavin concentrationshave been reduced to 10 mg/l and 12.5 mg/l respectively.

The antibiotics are already included in the formula so it is only necessary to add the ammonium iron(III) citrate solution (Art. no. 3130).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

Letheen Broth modified

for microbiology

For microbiological analyses of cosmetics, and samples containing disinfectants or preservatives.

Letheen Broth modified is a highly nutrious liquid medium recommended for use in microbiological testing of cosmetics.

Beef extract and Casein peptone provide nitrogen, vitamins, minerals and amino acids essential for growth. Yeast extract is the source of vitamins, particularly of the B-group. Sodium chloride supplies essential electrolytesfor transport and osmotic balance.
Glucose is a fermentable carbohydrate providingcarbon and energy.
Lecithin, Polysorbate 80 and sodium bisulfite neutralize quaternary ammonium compounds and partially neutralize the preservative system commonly found in cosmetics.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

Maximum Recovery Solution

ISO 6887, ISO 8199, ISO 22718, for microbiology

For homogenization and dilution of microbiological samples.

Saline Peptone Water (Maximum Recovery Diluent) is an isotonic diluent used for maximum recovery of microorganims and for the growth of bacterial cultures, principally marine bacteria.

ISO 6887 recmmends this medium as a diluent for the preparation of initial suspensions for microbiological samples. The low concentration of peptone does not cause a multiplication of the organisms within 1–2 hours of dilution of the sample.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

S ready-to-use

Peptone Water, buffered

ISO 6579, ISO 6887, ISO 22964, for microbiology

For homogenising food and preparing samples for microbiological analyses.

Buffered peptone water is a non-selective medium recommended as a preenrichtment medium by EN ISO 6579 normative in food samples containing suspected contaminants such as *Salmonella* and in ISO 22964 in milk and milk products for *Enterobacter sakazakii*.

This broth is rich in nutrients and produces high resuscitation rates for sublethally injured bacteria and intense growth.
Changes in pH my cause damages to bacteria growth. Buffered peptone water maintains a high pH over the enrichment period via the posphate buffer system and allows repair of injured cells sensitive to low pH.
Pancreatic digest of casein provides nitrogen, vitamins, minerals and amino acids essential for growth. Sodium pyruvate can be added as an additional source of energy, but may also have protective effects against hydrogen peroxide that aids in the resuscitation of stressed organisms.
Sodium chloride supplies essentials electrolytes for transport and osmotic balance.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

Ringer solution 1/4

ISO 8199, ISO 10718, for microbiology

Isotonic solution for cell suspensions according to ISO standards.

The composition of this Ringer's solution 1/4 allows autoclaving without precipitation.

Ringer's solution does not act as a revitaliser.
For dilution of food samples or substances that have undergone thermal treatment, it is more advisable to use peptone water (Art. no. 1L8H) or Maximum Recovery Solution (Art. no. 1L84) for the dilutions, these act as revitalisers.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

Sabouraud 2 % Glucose Broth

Ph. Eur., for microbiology

Selective medium for the taxonomic study of pathogenic fungi.

Sabouraud Glucose Broth is a liquid medium used for culturing yeasts, molds and aciduric microorganisms.

The high glucose concentrations and acidic pH value make this medium selective for fungi from clinical samples and other materials.
This medium is a modification of the Glucose Agar described by Sabouraud, with half the glucose and withour agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

Thioglycolate Broth

Ph. Eur., USP, ISO 7937, for microbiology

For the detection of microorganisms in sterility tests.

Thioglycolate Broth is used for detecting microorganisms in sterility tests, according to the formula specified in the USP and conforms to formulations detailed in the Bristish and European Pharmacopoeia.

The reducing agents thioglycolate and L-Cystine ensure anaerobiosis which is adequate even for fastidious anaerobes. In this broth a special agar with a high viscosity but a very low turbidity is used. A very slow cooling is recommended to prevent stratification. The higher viscosity of the fluid thioglycolate medium prevents rapid uptake of oxygen. Any increase in the oxygen content is indicated by the redox indicator sodium resazurin which changes colour to pink.

The -SH groups of these substances also inactivate arsenic, mercury and other heavy metal compounds. Thioglycolate media are thus suitable for the examination of materials which contain heavy metals or heavy metal preservatives.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

ROTI®DipSlides

Sterile dip slides with solid, ready-made culture medium for easy microbiological analysis of solutions and surfaces.

ROTI®DipSlides

Ready-made media, Contact agar

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
Tried-and-tested media in a new look – Now with optimised plastic carriers!

- **2 in 1:** Immersion culture media and impression agar
- Easy to use
- Reliable assay and easy interpretation
- Suitable for determining the microbiological contamination and for hygiene controls in a variety of domains
- Including detailed instructions-for-use

ROTI®DipSlides are made of a flexible plastic tongue which is coated with solid culture medium on both sides. Following dipping into the solution to be tested or inoculation by pressing to a surface, the slide is placed back into the sterile tube and incubated.
Total area for analysis is 11,44 cm^2 per side.
Tube Ø: 2,9 cm.

Large quantity orders are freshly produced. Hence, longer delivery times may occur.

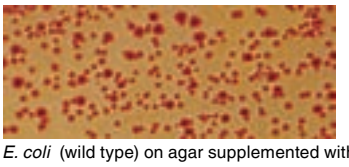
❄ S ready-to-use

ROTI®DipSlide CASO-TTC/RBCenr



ready-to-use, sterile, for microbiology

For total germ count and for detection of yeasts and moulds in solution or on surface. Suitable for analysis of water-mixable cooling lubricants, air conditions, water-soluble paint, and cosmetics.

Side 1 (CASO-TTC): Tryptic Soy Agar (CASO) (Ph. Eur.) (Art. No. X937) for reliable total germ count.

Side 2 (RBCenr): enriched Bengal Red Agar (with antibiotics) for detection of yeasts and moulds.

ROTI®DipSlide CASO-TTC/RBCenr is suitable for analysis of **water-mixable cooling lubricants, air conditions, water-soluble paint, and cosmetics**.

E. coli (wild type) on agar supplemented with TTC (example).

Expiration time on request.
Do NOT freeze!

Storage temperature: +4 to +15 °C
Transport temperature: cooled

S ready-to-use

ROTI®DipSlide PCA/Legionella

ready-to-use, sterile, for microbiology

For total germ count and for detection of legionells in solution or on surface.

Side 1 (PCA): Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.

Side 2 (Legionella): Legionella Agar (acc. to ISO 11731-2) (Art. No. CL48) for selective detection of legionells.

ROTI®DipSlide PCA/Legionella is suitable for supervision of units for heating of drinking water (Drinking Water Regulations), for surveillance of ventilation and air conditioning (VDI Guideline 6022), as well as for monitoring of the microbiological status of evaporative cooling systems (VDI Guideline 2047).

Expiration time on request.
Do NOT freeze!

Storage temperature: +4 to +15 °C

Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**

Additional costs resulting from such, **will be invoiced** (further information on request).

Please note: In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

S ready-to-use

ROTI®DipSlide PCA/TSA-Letheen

ready-to-use, sterile, for microbiology

For total germ count in liquids or on surfaces. Suitable for analysis of cosmetics and of preservative containing products or after disinfection. Contains two neutralizers.

Side 1 (PCA): Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.

Side 2 (TSA-Letheen): CASO Agar with Lecithin/Polysorbate 80 (Art. No. 8848) for detection of microorganisms from cosmetics and disinfected surfaces.

ROTI®DipSlide PCA/TSA-Letheen is suitable for 14-day controls of evaporative cooling systems (VDI guideline 2047).

Lecithin and Polysorbate 80 (Tween® 80) neutralise the growth-inhibiting impact of disinfectants and preservatives.

Expiration time on request.
Do NOT freeze!

Storage temperature: +4 to +15 °C
Transport temperature: cooled

Inactivation of anti-microbiological products:

Disinfectants and preservatives have the task of preventing the growth of, or killing bacteria. However, there are particularly resistant bacteria that can survive anti-microbe agents, or even survive in the active substance.
In order to determine the bacterial count, the bactericide or fungicide effect is neutralized by socalled uninhibitors.
Thus, media containing uninhibitors can be used to check the effectiveness of the disinfectants and preservatives.

S ready-to-use

ROTI®DipSlide VRBD

ready-to-use, sterile, for microbiology

For detection of enterobacteria in liquids or on surfaces.

DipSlide incubator EM4 EM4

Lightweight, small incubator specially designed for DipSlides. With transparent, easily removable cover for quick insertion and removal of DipSlides. Easy to operate, even for inexperienced users.
A stand insert and a thermometer are also supplied. Also usable without a stand for incubation of Petri dishes and contact plates.

Technical specifications:

Art. No.	KK43.1
Type	DipSlide incubator EM4
Suitable for	23 DipSlides
Operating temperature	Room temperature up to +44 °C
Vol.	4 l
Inner width	180 mm
Inner depth	180 mm
Inner height	125 mm
Outer width	230 mm
Outer depth	230 mm
Outer height	180 mm
Weight	1,5 kg
Mains connection	200 V

DipSlide incubator EM4	23 DipSlides	4	**KK43.1**	1 unit(s)	526,75

For easy interpretation of results, use the following table:

No. of colonies	Result	Interpretation
0	Negative	No contamination
1–10	Weakly positive	Weak contamination
11–20	Positive	Low contamination
21–100	Strongly positive	High contamination
>100	Highly positive	Very high contamination

Detection limit is 10^2 cfu/ml solution assayed.
For detailed instructions on interpretation see instruction-for-use.

Please note our **Technical Information Brochure** on the Internet next to the products:

ROTI®DipSlides
Evaluation aid

ROTI®ContiPlates

Sterile culture medium contact plates for the microbiological analysis of surfaces.

ROTI®ContiPlates

Sterile culture medium contact plates for the microbiological analysis of surfaces.

- Diameter 60 mm
- Surface 28 cm^2
- Very easy to use
- Domed agar surface optimal for testing specimen surfaces
- Prepared with our proven dehydrated nutrient media mixtures
- Easy evaluation due to grid on the bottom of the panel
- With detailed instructions-for-use

ROTI®ContiPlates are culture media plates with a diameter of 60 mm. The domed agar surface is especially suitable for analyzing the microbiological status of surfaces.
In the box, each 6 plates are packaged in a blister in discrete compartments. Thus, the sterile plates can be obtained individually.

The plate is gently pressed onto the surface for some seconds. Afterwards the plate is closed with the lid and incubated. The grid on the bottom of the plate helps interpreting the results.

Art. No.	Abbreviation	Agar	Application
9630	PCA	Plate-Count-Agar	Whole germs
9631	VRBD	Violet Red Bile Agar with Glucose	Enterobacteria
9632	RBC	Bengal Red Agar (with chloroamphenicol)	Yeasts and moulds
9633	Sab4plus	Sabouraud 4 % Glucose Agar (with chloroamphenicol)	Yeasts and fungi
9634	TSA-Letheen	CASO Agar with Lecithin/ Polysorbate 80	Whole germs after disinfection
2312	TSA	CASO-Agar	Whole Germs
2313	MacCon	MacConkey Agar	Enterobacteria
2314	VRB	Violet Red Bile Agar with Lactose	Coliforms

S ready-to-use

ROTI®ContiPlate MacCon

ready-to-use, sterile, for microbiology

For detection of enterobacteria on surfaces.

Contact plates · Ready-made media · Media plates · Ready-made plate enterobacteria

The MacConkey Agar (Art. No. X922) is certified according to Pharm. Eur. and ISO 21567 for the analysis of Enterobacteria.

Expiration time on request.

ROTI®Plate90

Our proven dry nutrient media as 90 mm ready-to-use nutrient media plates!

ROTI®Plate90

Ready-made media

Sterile ready-to-use culture media plates for microbiological analysis.

- Diameter 90 mm
- Surface 63,6 cm^2
- Ready-to-use and sterile
- Easy to use, reliable detection and simple evaluation
- Well applicable for microbiological analysis of samples
- With detailed instructions for use

ROTI®Plate90 are prepared culture media plates with a diameter of 90 mm. They are thus adapted to the size of membrane filters for assaying of low-germ fluids by membrane filtration method. They are also applicable for the microbiological analysis of samples in general. The germs of expected low-germ liquid samples are concentrated by membrane filtration. Afterwards, the membrane is placed on top of the medium and incubated. Using a membrane with a grid helps counting the resulting colonies.
Our products are tested and approved exclusively for research and development.

Samples which are expected to have a higher microbiological burden are prepared in a serial dilution. Afterwards, every dilution step is plated and incubated. The number of grown colonies is noted as result.

ROTI®Plate90 TSA 4N

Ph. Eur., USP, JP, EN ISO 11133, for microbiology

For monitoring microbial contamination.

Tryptone soy agar (TSA) is recommended by the Pharmacopeia Europaea for testing products under investigation for the presence of bacteria by the membrane filter method, and for counting bacteria on agar plates or by the dilution method (MPN method). As this medium contains two peptones obtained by enzymatic hydrolysis of casein and soy protein, it supports a wide range of microorganisms, including fastidious aerobic and anaerobic organisms.
The included disinhibitors lecithin, polysorbate 80 (Tween®80), sodium thiosulphate and histidine are also called neutralisers. Disinhibitors serve to neutralise residues of disinfectants and preservatives and ensure bacterial growth.

These plates are triple wrapped, which allows the removal of each individual package when the plates are taken further into the clean room.

Expiration time on request.

ROTI®Aquatest Plates

Sterile culture medium plates for the microbiological analysis of liquid samples.

ROTI®Aquatest Plates

Sterile culture medium plates for the microbiological analysis of liquid samples.

- Diameter 55 mm
- Surface 24 cm^2
- Easy to use
- Optimal for the membrane filtration method
- Also well applicable for microbiological analysis of samples in general
- Prepared with our proven dehydrated nutrient media mixtures
- With detailed instructions-for-use

ROTI®Aquatest Plates are prepared culture media plates with a diameter of 55 mm. They are thus adapted to the size of membrane filters for assaying of low-germ fluids by membrane filtration method. They are also applicable for the microbiological analysis of samples in general. The germs of expected low-germ liquid samples are concentrated by membrane filtration. Afterwards, the membrane is placed on top of the medium and incubated. Using a membrane with a grid helps counting the resulting colonies.

Samples which are expected to have a higher microbiological burden are prepared in a serial dilution. Afterwards, every dilution step is plated and incubated. The number of grown colonies is noted as result.

Art. No.	Abbreviation	Agar	Application
9640	PCA	Plate-Count-Agar	Whole germs
9642	YE	Yeast extract Agar	Bacteria, Yeast and moulds

Compact Dry Ready-Made Plates

Dry ready-made plates for easy microbiological analysis of solutions and compact samples

By NISSUI

S ready-to-use

CompactDry™

Anhydrous nutrient plates for simple microbiological analysis of solutions and dry matter.

- Simple and safe to use
- Safely non-slip stackable
- Easy interpretation due to chromogenic additives and 1 x 1 cm grid
- Storage and transport at room temperature
- With detailed instruction-for-use
- Suitable for the control of foods and feeds, cosmetics and pharmaceutical samples, for hygiene monitoring and contamination control, for schooling and student´s courses

CompactDry™ plates are suitable for detection and enumeration of microorganisms from foods and feeds, cosmetics and pharmaceutical samples, as well as for hygiene monitoring and contamination control in food-producing areas. Due to the chromogenic additives, colonies depict specific colouring, making them easy to interpret.

CompactDry™ plates are easy and safe to handle. Due to storage at room temperature, they may be used even on site. One millilitre of the sample to be analysed is applied onto the sterile plate surface, spreading itself evenly over the plate during rehydration of the medium. Dry sample matter is homogenised and solubilised using the CompactDry™ Dilution Rack (Art. No. 4823.1) prior to plate inoculation.

Art. No.	Compact Dry	Detection of	Certificate
4816	TC	whole germs	AOAC, MicroVal, NordVal
1070	X-BC	*Bacillus cereus*	MicroVal
1087	X-SA	*Staphylococcus aureus*	AOAC, MicroVal, NordVal
4817	SL	salmonells	-
4818	YM	yeast/moulds	AOAC, MicroVal, NordVal
4826	EC	coliforms /*E. coli*	AOAC, MicroVal, NordVal
4827	CF	coliforms	AOAC, MicroVal, NordVal
4828	ETB	enterobacteria	MicroVal, NordVal
1L17	PA	*P. aeruginosa*	AOAC, MicroVal, NordVal, ISO 16140

CompactDry™ EC

sterile, for microbiology

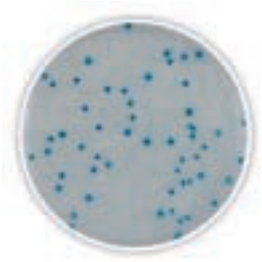
NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for detection of coliforms in general, particularly *E. coli*.

Ready-made media · Media plates · Ready-made plate *E. coli*/Coliforms

The nutrient medium used for CompactDry™ EC plates is related to the Coliform chromogenic Agar. It consists of a phosphate-buffered, rich medium with peptone and yeast extract as nutrient base, which contains tryptophan for later *E. coli* detection and has been enriched with NaCl, pyruvate and cholates. It also contains the colour substrates for ß-D-glucuronidase (blue / cyan / violet – *E. coli*) and ß-D-galactosidase (salmon / magenta / red – other coliforms).
Colonies of *E. coli* show a bright blue colour, while other coliforms grow in red to pink coloured colonies. Addition of red and blue colonies results in total count of coliforms.

AOAC-, MicroVal-, and NordVal- certified.



Growth area is 20 cm^2. Ø 47 mm.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

CompactDry™ CF

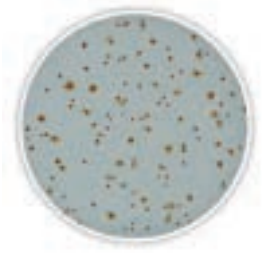
sterile, for microbiology

NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for detection of coliforms.

Ready-made media · Media plates · Ready-made plate *E. coli*/Coliforms

The nutrient medium used for CompactDry™ CF plates is related to the Coliform chromogenic Agar and resembles a modified version of the CompactDry™ EC plates. It consists of a phosphate-buffered, rich medium with peptone and yeast extract as nutrient base, containing tryptophan and enriched with NaCl, pyruvate and cholates. The Chromogenic mixture has been replaced by X-Gal, causing all coliform bacteria to grow in colonies of a bright blue colour.



AOAC-, MicroVal-, and NordVal- certified.

Growth area is 20 cm². Ø 47 mm.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

CompactDry™ TC

sterile, for microbiology

NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for total germ count.

Ready-made media · Media plates · Ready-made plate total count

CompactDry™ TC are based on a typical total germ count lagar using peptone, glucose and yeast extract as nutrient base. The addition of TTC as a redox indicator, allows living bacterial colonies to grow red in colour.

AOAC- MicroVal-, and Nordval certified.

Growth area is 20 cm². Ø 47 mm.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€

4816.2	240 unit(s)	blister	467,65

S ready-to-use

CompactDry™ ETB

sterile, for microbiology

NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for detection of enterobacteriaceae.

Ready-made media · Media plates · Ready-made plate enterobacteria

The nutrient medium used for CompactDry™ ETB plates is deduced from the Violet Red Bile Agar with Dextrose (VRBD). Due to the chromogenic additives contained, bacterial colonies show up in specific colours and are easy to evaluate.
Enterobacteriaceae grow in red colonies.

MicroVal-, and NordVal- certified.

Growth area is 20 cm². Ø 47 mm.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€
4828.3	8 unit(s)	blister	28,95

4828.2	240 unit(s)	blister	557,95

S ready-to-use

CompactDry™ SL

sterile, for microbiology

NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for detection of salmonellae.

Ready-made media · Media plates · Ready-made plate salmonells

The nutrient medium used for CompactDry™ SL plates is deduced from the formulation of Triple Sugar Iron Agar. Salmonellae may easily be identified by the green colouring of the colonies, accompanied by colour shift of the plate to yellow due to alcalization of the medium. Salmonellae producing hydrogen sulphide grow in black colonies on yellow medium.

Growth area is 20 cm². Ø 47 mm.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S ready-to-use

CompactDry™ PA

ISO 16140, sterile, for microbiology

NISSUI Pharmaceutical.

Ready-to-use plates with dried chromogenic culture medium for the detection of *Pseudomonas aeruginosa*.

Ready-made media · Media plates · Ready-made plate *Pseudomonas aeruginosa*

Compact Dry PA is a standard culture medium containing nutrient agar for the detection of the genus *Pseudomonas aeruginosa*.
Due to the redox indicator tetrazolium salt, the bacterial colonies show a red colouration. Differentiation from other pseudomonads is achieved by the formation of a coloured halo around the colony.
Pseudomonas aeruginosa grows as a red colony with a green-yellowish halo.

AOAC-, MicroVal-, NordVal- and ISO 16140 certified.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

CompactDry™ YM

sterile, for microbiology

NISSUI Pharmaceutical.

Ready-made plates with anhydrous chromogenic nutrient medium for detection of yeasts and moulds.

Ready-made media · Media plates · Ready-made plate yeasts and moulds

The nutrient medium used for CompactDry™ YM plates is deduced from an enriched version of the Potato Extract Glucose Agar. While accompanying bacteria are inhibited by inherent antibiotics, yeast colonies show a bright blue colour. Due to the net quality of the plate matrix, moulds are able to form their natural, three-dimensional growth structure accompanied by their respective characteristic colouring.

AOAC-, MicroVal-, and NordVal certified.

CompactDry™ Swab

ISO 6887, sterile, for microbiology

NISSUI Pharmaceutical.

All-in-one set of swab and nutrient broth for microbiological sampling of surfaces.

Sterile all-in-one system for sampling in the microbiological field of work. Suitable for analysis of foods and feeds, in pharmaceutical areas, as well as for hygiene monitoring, and for exclusion of contaminations.

Compact Dry Swabs are particularly suitable for sampling at difficult-to-access areas or when working on site. The sample taken may be transported inside the swab. Storage at room temperature as well as easy application makes them a very versatile tool in microbiology.

Compact Dry Swabs made by NISSUI are particularly easy to apply, and may also be used by laymen. In order to test a surface, the respective area is wiped with the sterile cotton swab. After returning the swab into the tube, the germs are released into the nutrient broth by agitation. The amount of 1 ml medium has been optimised for inoculation of nutrient agar plates in general, also making this swab most compatible with Compact Dry plates.

Contains 1 ml **Peptone Water, buffered**

Due to the adaptation to ISO 6887, the medium is slightly darker. No negative impact on usage.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Microbiological Nutrient Media

Carl ROTH provides the most important microbiological nutrient media as ready-made mixtures. Our anhydrous media fulfil the highest purity and quality requirements, several media are formulated according to the specifications of the European Pharmakopoeia (Ph.Eur.), European and German drinking water regulations, APHA, and other ISO standards.
Our microbiological nutrient media are suitable for analysis of food, cosmetics, pharmaceutics, and research, as well as for service and waste water analysis.

- Optimised formulation
- Superior quality and purity
- Tried and tested ready-made mixtures
- **Big packs on request**

Acetamide Broth (Solution A)

DEV, EN ISO 16266:2008, for microbiology

For confirmation of *Pseudomonas aeruginosa* in water samples.

Application: Use 3.4 g for 1 l broth. Solubilise in 900 ml, add freshly prepared solution B (sodium molybdate, Art. No. 0274.1, and iron sulfat, Art. No. P015.1) and adjust with water to 1 l.

Blood Agar (Base)

for microbiology

For isolation, cultivation and detection of haemolytic reaction of fastidious microorganisms.

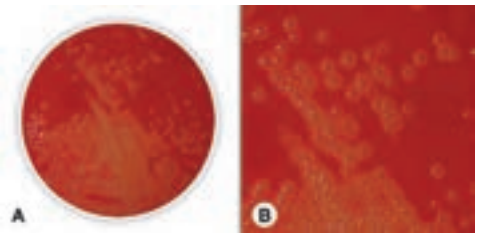

Figure:
A: *Streptococcus pyogenes.*
B: Enlargement of A, showing β-haemolysis caused by *S. pyogenes.*

Application: Use 40 g for 1 l agar. If required, add 50–110 ml defibr. blood.
Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 3

Composition

Meat peptone	10 g/l
Heart infusion	10 g/l
Sodium chloride (NaCl)	5 g/l
Agar	15 g/l
pH value	7,3 ±0,2

Campylobacter Agar, blood-free (Base)

for microbiology

For isolation of *Campylobacter jejuni*, *Campylobacter coli*, and *Campylobacter laridis* in foods, and other samples.

Modified formulation acc. to Bolton (Bolton *et al.*, (1984) *Clin. Microbiol.* 19:169-171), replacing blood with charcoal, sodium pyruvate and iron sulphate.

Application: Use 45.5 g for 1 l agar. After cooling add 2 vials (2x5 ml) reconstituted Campylobacter Supplement (Art. No. 4857.1).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Meat peptone	10 g/l
Beef extract	10 g/l
Sodium chloride	5 g/l
Casein hydrolysed	3 g/l
Bacteriological charcoal	4 g/l
Sodium deoxycholate	1 g/l
Iron sulphate	0,25 g/l
Sodium pyruvate	0,25 g/l

Campylobacter Selective Agar (Base)

for microbiology

For isolation of *Campylobacter coli* and *C. jejuni*.

The Campylobacter Selective Agar is based on the formulation of Bolton and Robertson (Bolton and Robertson (1982) *J. Clin. Path.* 35:462-7). Trough addition of the Campylobacter Preston Supplement (Art. No. 8851), the Agar is highly selective for *Campylobacter coli* and *C. jejuni*.

Application: Use 18.5 g for 475 ml agar. After cooling add 5–7 % lysed blood and 1 vial of Campylobacter Preston Supplement (Art. No. 8851).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

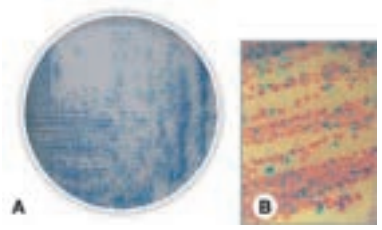
Microbiological Quality Control

Microbiological quality control of Carl ROTH molecular biological and microbiological culture media and agar is carried out according to following guidelines:



- Plating relevant bacterial strains from standardized stock solution (as a rule in dilutions of 10-1 to 10-10) on agar plates of culture medium to be tested. The preparation of the media and agar must be carried out strictly according to the instructions, which are included.
- Plates from a checked batch of culture media are used as a reference
- The developed colonies are counted and rated after adequate incubation. Counting is always carried out using the plate with colony number 30-300.
- Standardization and validation of test: reference plates are compared with the number of bacteria expected
- Reference and test plate colonies are analysed for size, colour, appearance and possible reaction to certain chemicals
- Growth count on the test plates:

„good“ or „satisfactory“	colony number = 50 % - 99 % of expected growth
„moderate“	colony number = 30 % - 50 % of expected growth
„inhibited“	colony number ≤ 30 % of expected growth
„zero“	no growth

Coliforms chromogenic Agar

for microbiology

For selective enrichment and simultaneous detection of *E. coli* and other Coliforms in water and food samples.

Staining of species:
A: *E. coli* blue (by reaction of the ß-D-Glucuronidase)
B: Other coliforms salmon-coloured (by reaction of the ß-D-galactosidase)
E. coli (blue) and *Citrobacter* (salmon-coloured).

The addition of tryptophane enables an indole test for *E. coli*.

Application: Use 26.4 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Dichlorane Bengal Red Agar (with chloramphenicol)

ISO 11133, ISO 21527-1, for microbiology

Selective agar for enumeration of yeast and food mould fungi, especially for strongly hyphen-forming fungi.

The addition of dichlorane inhibits hyphae-forming fungi from spreading and improves counting. Chloroamphenicol and a low pH-value inhibit the growth of bacteria.

Figure:
Aspergillus brasiliensis.

Application: Use 31.6 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 3

Composition

Peptone	5 g/l
Glucose	10 g/l
Potassium phosphate	1 g/l
Magnesium sulphate monohydrate	0,5 g/l
Chloroamphenicol	0,1 g/l
Dichlorane	0,002 g/l
Bengal red	0,025 g/l
Agar	15 g/l
pH value	5,6 ±0,2

Dichlorane Glycerol Agar (Base)

ISO 11133, ISO 21527-2, for microbiology

Selective agar for enumeration of yeast and food mould fungi, especially in half-dry and dry food.

The addition of dichlorane, the reduction of the water content by adding glycerol, and the low pH-value inhibit bacterial growth.

Figure:
Saccharomyces cerevisiae.

Application: Use 31.6 g for 1 l agar, add 18 vol.-% glycerol.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Peptone	5 g/l
Glucose	10 g/l
Potassium dihydrogen phosphate	1g/l
Magnesium sulphate ($MgSO_4$)	0,5 g/l
Chloroamphenicol	0,1 g/l
Dichlorane	0,002 g/l
Agar	15 g/l
pH value	5,6 ±0,2

Whitish precipitates in nutrient media

In media containing potassium or sodium phosphate, large amounts of yeast extract, or non-fat milk, light-coloured precipitates may form during autoclaving, appearing as opaqueness, light-coloured clouding or white precipitate. In the majority of cases this is insoluble calcium- or magnesium phosphates, which originate in exceeding of the solubility product during heating, and which don't resolubilise during cooling. Typical media showing these phosphate crystals are, for instance, Terrific Broth (TB), Plate Count Agar with non-fat milk, or **Fraser media**.
The amount of phosphates present is only slightly reduced by that, so the medium may be used without any problems. In case the cloudiness hinders analyses, the bouillon may be cleared from precipitates by sterile filtration. Agar media may generally be used directly.

In cases of recurrence we recommend to thoroughly check the desalting plant, or to desalt the water used repeatedly, in order to remove residual calcium carbonate (chalk).

Fraser Broth (Base)

ISO 11133, ISO 11290-1, for microbiology

Enrichment medium for detection and isolation of *Listeria* in foods and environmental samples.

Full Fraser Broth including esculin, acriflavine and nalidixic acid.

Application: Use 57.3 g for 1 l broth. A slight precipitate may appear after autoclaving. Prior to use add sterile filtered ferric(III) ammonium citrate solution ad 0.5 g/l broth (Art. No. 3130.1).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Sterilisation of media containing sugar

Media containing sugar or **malt extract**, particularly those with a low pH, must be sterilised with care. We recommend autoclaving at up to 118 °C for a maximum of 15 min. Please observe the guidelines given in the instructions for use.

The reasons are as follows:

a) Heating sugar in combination with amino acids (from peptone, meat extract, yeast extract, or similar) can result in **toxic Maillard reaction products** which may interfere with proliferation of micro-organisms.

b) Inclusion of different sugar molecules and sugar degradation products will cause premature chain termination and inhibit chain cross-linking. The **gelability of agars containing sugar** will thereby be reduced.

Mannitol Egg Yolk Polymyxin Agar (Base)

for microbiology

For enumeration and isolation of *Bacillus cereus* in food, acc. to Mossel.

Figure:
Bacillus cereus.

Application: Use 43 g for 900 ml agar. After cooling add 100 ml Egg Yolk Emulsion (Art. No. 0402.1) and 2 vials (2x6 ml) reconstituted *Bacillus cereus* Supplement (Art. No. 4856.1).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

MR/VP Broth

for microbiology

For the differentiation of the *Escherichia-Enterobacter* group (Methyl Red and Voges-Proskauer reactions)

Applications

MR/VP broth is used in the coloured series for the differentiation of enteric Gram-negative bacilli based on the methyl red and Voges-Proskauer reactions of the Escherichia-Enterobacter group.
The methyl red test is used to differentiate between microorganisms that produce and maintain a high acid concentration and those that produce a lower amount of acid.
Enterobacter bacteria oxidize the acetylmethylcarbinol in the Voges-Proskauer reaction and cause a red coloration, in contrast to *Escherichia coli*, which does not.

Application: Use 17 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

„Infusion“

In the early days of bacteriology, so-called “**infusions**” (tissue extraction) were used in microbiological media. During the development of the dry media, these extracts were dried and used in a powdery form to produce purified and standardised extracts. Today, extracts or special, highly purified peptones are commonly used in modern media.

As simply manufactured and non-standardised natural products, “**infusion**” have a relatively low batch-to-batch constancy and vary both in composition and in nutrient content. However, they are still commonly used in several classic media.

Pseudomonas chromogenic Agar

for microbiology

For detection and isolation of *Pseudomonas*.

Staining of species:
Pseudomonas aeruginosa magenta on green-blue coloured agar.
E. coli, *Enterococcus*, *Salmonella* and *Staphylococcus* inhibited or colourless.

Application: Use 37 g for 1 l agar. Do not overheat!

Storage temperature: +4 °C

Thioglycolate Broth

Ph. Eur., USP, for microbiology

For the detection of microorganisms in sterility tests.

Glucose, peptone and yeast extract contained in the thioglycolate medium provide growth factors necessary for bacterial growth. The reducing agents sodium thioglycolate and L-cystine reduce the accumulation of peroxides, which are lethal to some microorganisms.

Resazurin serves as a redox indicator; on oxidation it shows a pink colour, on reduction it is colourless.

Application: Use 29.8 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Microbiological Quality Control

Microbiological quality control of Carl ROTH molecular biological and microbiological culture media and agar is carried out according to following guidelines:

- Plating relevant bacterial strains from standardized stock solution (as a rule in dilutions of 10-1 to 10-10) on agar plates of culture medium to be tested. The preparation of the media and agar must be carried out strictly according to the instructions, which are included.
- Plates from a checked batch of culture media are used as a reference
- The developed colonies are counted and rated after adequate incubation. Counting is always carried out using the plate with colony number 30-300.
- Standardization and validation of test: reference plates are compared with the number of bacteria expected
- Reference and test plate colonies are analysed for size, colour, appearance and possible reaction to certain chemicals
- Growth count on the test plates:

„good“ or „satisfactory“	colony number = 50 % - 99 % of expected growth
„moderate“	colony number = 30 % - 50 % of expected growth
„inhibited“	colony number ≤ 30 % of expected growth
„zero“	no growth

Yeast Extract Agar

DEV, EN ISO 6222, ISO 11133, for microbiology

For the isolation and enumeration of microorganisms in general, e.g. bacteria, moulds, or yeast. Particularly for count of microorganisms isolated from water samples.

Application: Use 24 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Granulated Dehydrated Nutrient Media for Microbiology

- **Easy:** high solubility
- **Safe:** dust minimised granules reduce health risk
- **Homogeneous:** reduced formation of lumps or separation of the components
- **Fast:** improved flowability for faster processing
- **Tried and tested:** formulation equals our powder media, without any further additives
- **All-round:** suitable for enviromental analysis, cosmetic-, food- and water-industry, and many more
- **Clean:** minimised contamination of workplace

CASO Broth, granulated

Ph. Eur., granulated, for microbiology

For cultivation of fastidious and non-fastidious microorganisms.

Broth medium A (Ph. Eur. 6.0) · Soy Peptone Broth · TSB Broth · Tryptic Soy Broth · Casein Soya Bean Digest Broth (Ph. Eur. 6.3, 7.0, 8.0 and 9.0)

Granulated, dust-minimized version with high solubility and superior homogeneity.

Application: Use 30 g for 1 l broth.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Nutrient Media Additives

S ready-to-use

Ammonium iron(III) citrate solution

12,5 %, sterile, ready-to-use

Media supplement for detection of *Listeria monocytogenes*.

Directions for use

Ammonium iron (III) citrate (ferric ammonium (III) citrate) is used as additive in nutrient media for detection of Listeria species. Hydrolysis of esculin by *Listeria* species results in 6,7-dihydroxycoumarin which reacts with ferric ions producing blackening of the medium. Additionally, ferric ammonium citrate has been shown to improve the growth of *Listeria monocytogenes* (Cowart and Foster (1985) *J. Infect. Dis.* 151:721).

Application: One vial ferric ammonium (III) citrate solution (0.25 g in 2 ml) is added to 500 ml autoclaved Fraser Broth (Art. No. HP17) or Fraser Half Broth (Art. No. HP18). Mix carefully and store cooled for 2 weeks in maximum. Fraser Broth is used in the rapid detection of Listeria from food and environmental samples (Fraser and Sperber (1988) *J. Food Protect.* 51:762).

One box of 10 vials Ammonium iron(III) citrate solution is sufficient for 10 x 500 ml Fraser Broth (Art. No. HP17) or Fraser Half Broth (Art. No. HP18).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

S

Egg Yolk Emulsion (20 %)

20 %, ISO 7932, sterile, stabilised, for microbiology

Media supplement for preparation of egg yolk agar for detection of microbial lecithinase activity.

Egg Yolk Emulsion is used as supplement in nutrient agars for detection of lecithinase activity in microbial colonies. Herewith, bacterial species like *Bacillus cereus* and *Clostridium perfringens*, or *Staphylococcus aureus* may be identified. The lecithinase activity can be noted by formation of light, sometimes whitish halos surrounding the colonies.

Application: The ISO 7932 recommends a final concentration of 10 % emulsion in the prepared medium in general, e.g. in Mannitol Egg Yolk Polymyxin Agar (Base) (Art. No. 5765.1) for examining the lecithinase activity of *Bacillus cereus*.
We recommend using TSC Agar (Base) (Art. No. CL51.1), Mannitol Salt Agar (Art. No. CL81.1) or Palcam Listeria Agar (Base) (Art. No. 5768.1) for base agar with the addition of 5 % emulsion.
Add after autoclaving.

100 ml Egg Yolk Emulsion are sufficient for 1 l agar medium.

Storage temperature: +4 °C
Transport temperature: ambient temp.

S

Egg Yolk Tellurite Emulsion (20 %)

20 %, ISO 6888, sterile, stabilised, for microbiology

Media supplement for preparation of egg yolk tellurite agar, for detection of *Staphylococcus aureus*.

Egg Yolk Tellurite Emulsion is used as supplement in nutrient agars for detection of lecithinase activity and concurrent tellurite reduction in microbial colonies. Hence, *Staphylococcus aureus* may be identified by the dark grey to black staining of the colonies due to tellurite reduction, accompanied by lecithinase-caused formation of light, sometimes whitish halos surrounding the colonies.

Application: We recommend using Baird Parker Agar (Base) (Art. No. X913.1) for base agar.
The ISO 6888 recommends a final concentration of 5 % emulsion in the prepared medium.
Add after autoclaving.

100 ml Egg Yolk Tellurite Emulsion is sufficient for 2 l agar medium.

Storage temperature: +4 °C
Transport temperature: ambient temp.

Identification of Microorganisms

Testing Reagents

ready-to-use

ROTITEST®Oxidase strips

ROTITEST® Bio Analysis, ready-to-use

Rapid test system for detection of cytochrome oxidase in microorganisms.

Rapid test system for detection of oxidase-positive microorganisms.

Directions for use

A green coloured area indicates the reaction zone, impregnated with detection reagent, at one end of the paper strip. The colony to be analysed is smeared onto this reaction zone. Within 15 seconds, a dark-blue to violet colouring indicates presence of oxidase-positive microorganisms.

The following microorganisms are typically oxidase-positive: *Helicobacter pylori, Vibrio cholerae, Campylobacter jejuni, Legionella pneumophila, Neisseria, Moraxella*, many *Pseudomonaceae* and *Diplococci*. Many *Enterobacteriaceae* are typically oxidase-negative.

Kovacs' Reagent

for microbiology

Media supplement for detection of microbial indole.

Tryptophanase-positive microorganisms (e.g. *E. coli, S. faecalis, Proteus sp.*) that cleave tryptophane hereby release indole, which may be detected by reaction with dimethylamino benzaldehyde by forming a dark red dye.

Microorganisms must be incubated in a glucose-free broth with high concentrations of tryptophane present. Kovacs' Reagent is added to 24-48 h old cultures in a concentration of 0.2 to 0.5 ml per 5 ml broth. A colour shift to dark red shows presence of indole, thus confirming the inoculating colony as being indole-/tryptophanase-positive.

Application: Customary concentration in medium: 4–10 %

100 ml Kovacs' Reagent is sufficient for approx. 2 l medium.

Storage temperature: +4 °C

S ready-to-use

Legionella Acid Buffer

EN ISO 11731-2, sterile, ready-to-use, for microbiology

Sterile acid buffer solution for detection of legionella.

To minimize the accompanying bacterial flora, 30 ±5 ml of Legionella Acid Buffer are applied to the membrane after membrane filtration. After an exposure time of approx. 5 minutes, the buffer is vacuumed off and the membrane rinsed with sterile distilled water.
The filter is transferred sterile to a legionella selective agar, e.g. Legionella Agar (Base) (Art. No. CL48.1) and incubated.

Bottle with 50 ml graduation. With original seal.
The buffer should be used within 4 weeks after opening.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Methyl red solution

2 %, for microbiology

Indicator solution for testing mixed acid fermentation in enterobacteria.

Application

Acid formation during mixed acid fermentation is detected with the methyl red test (MR test).

Mixed acid fermentation produces a lot of acid (pH<4.4), which leads to a deep red colour (positive) after adding the methyl red solution. If no mixed acid fermentation takes place, little acid is present and a yellow/orange colour (negative) results.

The methyl red test is part of the Bunte series for the differentiation of bacteria, especially from the *Enterobacteriaceae* group.

RiboFlow® Kits for biomolecular detection of germs

- By SY-LAB
- Specificity comparable to PCR
- Short assay time (<30 min)
- Simple protocol
- No expensive instrumentation necessary
- Particularly convenient for testing foods, toiletries and cosmetics
- Storage temp.: +15 to +25 °C

SY-LAB´s RiboFlow® Test Kits were especially developed for detection of relevant bacterial contamination on-site, based on molecular flow technology - quickly and highly specific, without the need for sophisticated sampling , complex amplification techniques and expensive equipment.
Replicating cells are reliably detected by their ribosomal RNA in less than 30 minutes.
RiboFlow® Salmonella and RiboFlow® Listeria Twin are validated according to ISO 16140-2:2016.

The test is easily performed with usual cultures in enrichment media or with single colonies from agar plates. The sample is just mixed with the included solutions and pipetted on the test cassette. As result, a distinctive and easy to read line occurs only in the presence of the target organism.
Every kit includes a detailed manual with Standard- and Quick reference protocols.

We recommend the usage of a small laboratory centrifuge with at least 2000 x g (e.g. Art. No. CX73.1), a mini incubator, optimally with window (e.g. Art. No. YC53.1) and a tray (e.g. Art. No. YH58.1, Measures: 26 x 20 x 2 cm) as accessories for the application of the kits.

Figure:
Example result of the RiboFlow® test cassettes
A: RiboFlow®-Listeria Twin (Art. No. 9884):
Line topmost: Control line
Line in the middle: positive result for Listeria monocytogenes
Bottom line: positive result for Listeria spp.
B: RiboFlow®-Salmonella (Art. No. 9881)
Line topmost: Control line
No other line: negative result, the organism has not been detected

9884.1: Within the RiboFlow® Listeria Twin Kit, one test cassette detects simultaneously the presence of *Listeria monocytogenes* and/or of other *Listeria* spp.
9894.1: The RiboFlow® Cosmetics Combi test Kit consists of 6 sets with 4 test cassettes each with whom the target organisms *Escherichia coli*, *Pseudomonas aeruginosa*, *Staphylococcus aureus* and *Candida albicans* can be tested parallely.
9895.1: Within the RiboFlow® P/En Kit, one test cassette detects simultaneously the presence of *Pseudomonas aeruginosa* and/or of enterobacteria.

Microbiological Staining

Microbiological staining is mostly applied for identification of microorganisms during microscopic analysis. Due to their affinity to certain cell structures, acidic dyes or salts of basic aniline dyes are used frequently for contrastation of cells, differential staining, or accentuation of specific structures (flagella, spores, or capsules).

For detailed information on the products please see chapters “Histology/Staining” and “Chemicals A–Z”.

Solutions for Gram Staining

Classic Staining acc. to Gram for differentiation of microorganisms.

Product name	Art. No.	Pack Qty.	€
Carbol gentian violet solution	**CN00.1**	500 ml	37,55
	CN00.2	1 l	55,40
Carbolic fuchsine solution	**A130.2**	500 ml	28,50
	A130.1	1 l	46,15
Ethanol	**P075.1**	1 l	98,80
	P075.3	1 l	96,25
	P075.2	2.5 l	208,05
	P075.4	2.5 l	204,80
	P075.5	5 l	385,95
	P075.6	10 l	622,45
	P075.7	10 l	611,70

Dyes for Staining of Bacteria

Product name	Art. No.	Pack Qty.	€
Alizarin red S (C.I. 58005)	**0348.1**	10 g	25,30
	0348.2	25 g	38,60
	0348.3	100 g	123,10
Carbolic fuchsine solution	**A130.2**	500 ml	28,50
	A130.1	1 l	46,15
Crystal violet (C.I. 42555)	**T123.2**	5 g	22,05
	T123.1	25 g	36,05
	T123.3	100 g	87,65
Lactophenol blue solution	**3097.1**	100 ml	36,45
LOEFFLER's methylene blue solution	**AE64.1**	500 ml	34,95
	AE64.2	1 l	49,35
	AE64.3	2.5 l	98,40
Rose Bengale B (C.I. 45440)	**3162.1**	50 g	149,45
Sudan black B (C.I. 26150)	**0292.1**	10 g	29,60
	0292.2	25 g	46,80
	0292.3	50 g	71,50

For additional product data and safety information, see chapter Chemicals A–Z.

Solutions for Neisser Staining

Routine staining method, mainly used for identification of Coryne bacteria causing Diphtheria.

Product name	Art. No.	Pack Qty.	€
Neisser's solution I	**3463.1**	100 ml	26,35
	3463.2	500 ml	52,60
Neisser's solution II	**3464.1**	100 ml	26,35
	3464.2	500 ml	52,60
Neisser's solution III	**3466.1**	100 ml	26,35
	3466.2	500 ml	52,60

For additional product data and safety information, see chapter Chemicals A–Z.

Dyes for Spore Staining

Stains spores green and bacteria red or rose.

Product name	Art. No.	Pack Qty.	€
Eosin Y (C.I. 45380)	**7089.1**	50 g	45,05
	7089.2	100 g	77,95
	7089.3	500 g	252,65
Malachite green oxalate (C.I. 42000)	**5895.2**	25 g	21,00
	5895.1	100 g	42,90
	5895.3	250 g	63,35
Safranin O (C.I. 50240)	**T129.1**	10 g	53,65

For additional product data and safety information, see chapter Chemicals A–Z.

Nutrient Media for Molecular Biology

All nutrient media for molecular biology are according to the data given in Sambrook and Russell, *Cold Spring Harbour Laboratory Press*, Cold Spring Harbour, New York, 2001.

Selective Media with Antibiotics

Nutrient media for selection and selective cultivation of recombinant *E.coli.*

- Tried and tested Standard media for molecular biology complemented with antibiotics
- Easy and uncomplicated storage of the powder at 20 °C
- With low or high salt content according to Luria/Miller or Lennox
- With antibiotics in different end concentrations
- Instruction for use: 35 g (according to the Lennox method) or 40 g (according to the Luria/Miller method) of the powder are weighed out per 1 litre of agar.

Product name	Advantage	Art. No.	Pack Qty.	€
LB-Agar (Lennox) / Amp100	Low salt content acc. to Lennox. With ampicillin: end concentration of 100 µg/ml.	**8852.1**	500 g	127,95
		8852.2	1 kg	231,15
		8852.3	2.5 kg	514,95
LB-Agar (Lennox) / Kana50	Low salt content acc. to Lennox. With kanamycin: end concentration of 50 µg/ml. Autoclavable.	**8853.1**	500 g	278,45
		8853.2	1 kg	532,15
LB-Agar (Luria/Miller) / Amp100	High salt content acc. to Luria/Miller. With kanamycin: end concentration of 50 µg/ml. Autoclavable.	**8855.1**	500 g	100,55
		8855.2	1 kg	192,45
		8855.3	2.5 kg	446,15
LB-Agar (Luria/Miller) / Amp50	High salt content acc. to Luria/Miller. With ampicillin: end concentration of 50 µg/ml.	**8858.1**	500 g	99,45
		8858.2	1 kg	188,15
		8858.3	2.5 kg	439,70
LB-Agar (Luria/Miller) / Chloramph34	High salt content acc. to Luria/Miller. With ampicillin: end concentration of 100 µg/ml.	**8861.1**	500 g	87,00
		8861.2	1 kg	156,45
		8861.3	2.5 kg	364,45
LB-Agar (Luria/Miller) / Kana50	High salt content acc. to Luria/Miller. With chloroamphenicol: end concentration of 34 µg/ml. Autoclavable.	**8860.1**	500 g	160,20
		8860.2	1 kg	295,65

For additional product data and safety information, see chapter Chemicals A–Z.

Granulated Media

LB Broth (Lennox), granulated

granulated, for molecular biology

Standard formulation used for propagation and culturing of *E. coli*. With low salt quantity for the recovery of plasmids and for phage amplification after addition of magnesium chloride.
Granulated, dust-minimized version with high solubility and superior homogeneity.

Application: Use 20 g for 1 l broth.

5 g/l NaCl

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Tryptone ..... 10 g/l
Yeast extract ..... 5 g/l
Sodium chloride (NaCl) ..... 5 g/l
pH value ..... 7,0 ±0,2
Granulation ..... complies

Art. No.	Pack Qty.	Pack.	€
6669.1	500 g	plastic	115,60
Original pack 6 x 500 g			109,82/500 g
6669.2	1 kg	plastic	203,75
Original pack 6 x 1 kg			193,56/1 kg
6669.3	2.5 kg	plastic	459,60
6669.4	5 kg	plastic	857,35

LB-Agar (Lennox), granulated

granulated, for molecular biology

Granulated, dust-minimized version of the Luria-Bertani Agar formulated acc. to Lennox. With high solubility and superior homogeneity.

Application: Use 35 g for 1 l agar.

5 g/l NaCl

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Tryptone ..... 10 g/l
Yeast extract ..... 5 g/l
Sodium chloride (NaCl) ..... 5 g/l
Agar-Agar ..... 15 g/l
pH value ..... 7,0 ±0,2

Terrific Broth, granulated

granulated, for molecular biology

Nutricious medium for the culture and proliferation of *E. coli*.

Granulated, dust-minimized version with high solubility and superior homogeneity.

Terrific Broth is a nutritious medium for the culture and proliferation of *E. coli*. Compared to LB medium Terrific Broth supports higher cellular density, therefore increasing the yield during plasmid and protein preparations.

Application: Use 50,8 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Standard Media

Yeast-Nitrogen-Base (without Amino Acids)

for molecular biology

For yeast classification based on amino acid and carbohydrate requirements.

Yeast Nitrogen Base (without amino acids) contains ammonium sulphate, all vitamins and all organic salts needed to cultivate yeasts, **except for the amino acids and carbohydrate sources**.

By selective addition of single amino acids and sugars the yeast cells are tested for sugar assimilation and for their dependency on specific amino acids, hereby revealing parameters for their classification.

Application: Add 6,7 g for 100 ml broth for 10x stock solution.
Use selected sugar/amino acid.
Do not boil, do not autoclave! Sterilise by sterile filtration!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Ammonium sulphate	5,0 g/l
Potassium phosphate	1,0 g/l
Magnesium sulphate	0,5 g/l
Calcium chloride	0,1 g/l
Sodium chloride (NaCl)	0,1 g/l
Inositol	2,0 mg/l
Boric acid	0,5 mg/l
Niacin	0,4 mg/l
Thiamine hydrochloride	0,4 mg/l
Pyridoxin hydrochloride	0,4 mg/l

LB-Broth

LB-Broth is a standard medium for maintanance and propagation of *E. coli*. The LB-series of media (**L**uria and **B**ertani) includes several formulations, which differ mainly in their salt contents: Luria, Luria-Bertani, LennoxL, LennoxLB, Luria/Miller. For plasmid propagation, salt concentrations between 5 and 10 g/l are recommended.

Nutrient Media for Molecular Biology

LB Broth (Lennox)

for molecular biology

Standard formulation used for propagation and culturing of *E. coli*. The salt content was adjusted to enable high-copy plasmid proliferation and preparation. Additionally, LB medium may be supplemented with magnesium chloride in order to gain an enriched broth for phage propagation.

Application: Use 20 g for 1 l broth.

5 g/l NaCl

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Composition

Nutrient Media for Molecular Biology

NZCYM Broth

for molecular biology

For the cultivation of *E. coli* and phages Lambda.

A superior medium for increased yields of phage Lambda.

Application: Use 22 g for 1 l broth.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 3

Composition

Casein, enzymatically digested ..... 10 g/l
Yeast extract ..... 5 g/l
Sodium chloride (NaCl) ..... 5 g/l
Casamino Acids ..... 1 g/l
Magnesium sulphate ($MgSO_4$), anhydrous ..... 0,98 g/l
pH value ..... 7,0 ±0,2

NZYM- and NZCYM Broth

These media were designed for the propagation of **bacteriophage Lambda**. In order to encourage multi phage insertion into the host cell, supplementation with 0.2 % maltose is recommended (prepare a 20 % solution and add 1 ml per 100 ml of medium), which promotes expression of LamB (lambda receptor).
If maltose is added, the medium should not be used to create phage stocks, as binding of phage particles to membrane fragments will occur because of increased LamB density.

SOB Broth

for molecular biology

Enriched broth for propagation of *E. coli*.

Particularly suited for proliferation of competent cells after transformation.

May be enriched to SOC-medium with 20 mM glucose.

Application: Use 26,64 g for 1 l broth.
May be enriched to SOC-medium with 20 mM glucose.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

SOB

Super **O**ptimal **B**roth (SOB) is a complex, nutritious nutrient medium which is used prior to and after transformation of E. coli bacteria. By adding 20 mM glucose it is enriched to SOC (**S**uper **O**ptimal Broth with **C**atabolite repression) which is optimal for coddling up of freshly transformed bacteria. Through this, SOC increases transformation efficiency. In order to avoid caramelisation, glucose may only be added after autoclaving.

Nutrient Media for Molecular Biology

Terrific Broth

for molecular biology

Nutricious medium for the culture and proliferation of *E. coli.*

Terrific Broth is a nutricious medium for the culture and proliferation of *E. coli*. Compared to LB medium Terrific Broth supports higher cellular density, therefore increasing the yield during plasmid and protein preparations.

Application: Use 50,8 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Casein, enzymatically digested ..... 12 g/l

Terrific Broth

Terrific Broth is a phosphate buffered, highly nutritious medium that is particularly used prior to plasmid isolation, in order to increase the yield. Compared with LB Broth, TB contains a nearly 5x elevated concentration of yeast extract, providing the required growth factors, vitamis and nucleotides. The phosphate buffer stabilises pH values. Hence, bacteria proliferate to high cell density, while lysation is slowed down.
The high phosphate concentration may lead to precipitation of insoluble magnesium- or calcium phosphates. After autoclaving, antibiotics, glycerine, dextrose etc. may be added for further enrichment of the broth.

Terrific Broth modified

for molecular biology

Nutricious medium for the culture and proliferation of *E. coli*.

Terrific Broth supports high cellular density and is recommended for use during cultivation of bacteria for plasmid isolation or *in vitro* protein expression.

In the formulation of Terrific Broth modified, the phosphate content has been reduced, in order to prevent precipitation of insoluble salts during autoclaving.

Application: Use 47,6 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.
In the formulation of Terrific Broth modified, the phosphate content has been reduced, in order to prevent precipitation of insoluble salts during autoclaving.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

YPD Agar

for molecular biology

For the cultivation and propagation of yeasts.

Application: Use 65 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Peptone ..... 20 g/l
Yeast extract ..... 10 g/l
Glucose ..... 20 g/l
Agar-Agar ..... 15 g/l
pH value ..... 6,5 ±0,2

Art. No.	Pack Qty.	Pack.	€
X971.1	500 g	plastic	101,60
Original pack 6 x 500 g			96,52/500 g
X971.2	1 kg	plastic	176,85
Original pack 6 x 1 kg			168,01/1 kg
X971.3	2.5 kg	plastic	401,55

YPD Medium

YPD is a rich medium for the maintenance and propagation of *S. cerevisiae.*
It is suitable if selections for auxotrophies are not intended.
Glucose is included as a carbon source.
Wild type strains of *S. cerevisiae* show a doubling time of approx. 90 min in YPD.

2xYT Broth

for molecular biology

Nutritious medium for proliferation of *E. coli*.

Application: Use 31 g for 1 l broth.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Tryptone ..... 16 g/l
Yeast extract ..... 10 g/l
Sodium chloride (NaCl) ..... 5 g/l
pH value ..... 7,0 ±0,2

Art. No.	Pack Qty.	Pack.	€
X966.1	500 g	plastic	84,85
Original pack 6 x 500 g			80,61/500 g
X966.2	1 kg	plastic	151,05
Original pack 6 x 1 kg			143,50/1 kg
X966.3	2.5 kg	plastic	341,35

2xYT Agar

for molecular biology

Nutritious liquid medium formulated to promote the growth of host cells (*E. coli*).

Application: Use 46 g for 1 l agar.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 3

Composition

Tryptone ..... 16 g/l
Yeast extract ..... 10 g/l
Sodium chloride (NaCl) ..... 5 g/l
Agar ..... 15 g/l
pH value ..... 7,0 ±0,2

Art. No.	Pack Qty.	Pack.	€
X967.1	500 g	plastic	103,75
Original pack 6 x 500 g			98,56/500 g

2x YT Media

Very nutricious medium for proliferation of M13 and other filamentous phages in *E. coli*. 2x YT Medium (**Y**east extract / **T**ryptone) contains big amounts of vitamins, amino acids, nucleic acids and other base components, allowing phages to propagate without weakening the host bacterium.
This medium may also be used for proliferation of recombinant *E. coli*.

► Granulated Media see page 345

Nutrient Media of vegetable origin

- Nutrient media from raw materials of pure plant origin
- TSE-/BSE-free
- Certificates of origin on request

animal-free TSE-/BSE-free

LB Broth (Lennox) vegetal

animal-free, for molecular biology

Standard formulation made from compounds of pure vegetable origin, used for propagation and culturing of *E. coli*. Low salt content for plasmid isolation. Supplemented with magnesium chloride also suitable for phage propagation.

Application: Use 20 g for 1 l broth.

5 g/l NaCl

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Vegetable peptone ..... 10 g/l
Yeast extract ..... 5 g/l
Sodium chloride (NaCl) ..... 5 g/l

animal-free TSE-/BSE-free

Terrific Broth vegetal

animal-free, for molecular biology

Nutritious medium made from compounds of pure vegetable origin for culture and proliferation of *E. coli*.

Nutritious medium made from compounds of pure vegetable origin for culture and proliferation of *E. coli*. Terrific Broth supports very high cellular density, therefore increasing the yield during plasmid and protein preparations.

Application: Use 50,8 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Composition

Vegetable peptone ..... 12 g/l
Yeast extract ..... 24 g/l

Basic Reagents for Nutrient Media

High-quality compounds are vital for rapid growth and efficient selection of microorganisms. Peptones in particular are an easily accessible source of carbohydrates as well as nitrogen and amino acids. Yeast extracts additionally are very rich in vitamins, growth factors, and nucleic acids. The most common basic reagents for nutrient media have been assembled here.

Casein hydrolysate, bacteriological

acid-hydrolysed, for biochemistry

Manufactured by hydrolysation of casein by hydrochloric acid. Tryptophane-free. High-grade casein hydrolysate **with superior amino-nitrogen/total nitrogen ratio (AN/TN)**. Particularly suitable for sensitive assays and applications requiring high yields, like production of bacterial toxins or vaccines.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Art. No.	Pack Qty.	Pack.	€

A157.2	1 kg	plastic	342,95
Original pack 6 x 1 kg			325,80/1 kg

Casein hydrolysate, standard

acid-hydrolysed, for molecular biology

Ingredient of molecular and microbiological nutrient media, vitamin-free.

Acidic hydrolysate of casein with low cystein and tryptophane content, free of vitamins. Excellent for the production of bacterial toxins and vaccins.

With standard amino-nitrogen/total nitrogen ratio (AN/TN).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Art. No.	Pack Qty.	Pack.	€

Original pack 6 x 1 kg			162,93/1 kg

Lactalbumin

for microbiology and biochemistry

Lactalbumin is produced by enzymatic hydrolysis of milk whey. It consists of peptides, amino acids and carbohydrates, simple and complex.

It is used in media for culturing of bacterial cells (e.g. *lactobacilli*), for tissue culture, production of vaccines and in fermentation procedures.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Art. No.	Pack Qty.	Pack.	€

Basic Reagents for Nutrient Media

Malt extract, bacteriological

powdered, for microbiology

Additive to malt containing culture media and agars.

High quality additive for nutrient media requiring a superior malt content. Optimally suited for bacteriological applications due to low pH value.

Free of nitrite. Do not overheat!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€
AE68.1	500 g	plastic	77,95
Original pack 6 x 500 g			74,05/500 g

Malt extract, standard

powdered, for culture media

Additive to malt containing culture media and agars.

Powdered malt extract for standard applications.

Malt extract possesses a very large amount of carbohydrates. The medium, therefore, turns dark brown very quickly when overheated.

Do not overheat!

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

X976.2	1 kg	plastic	82,25
Original pack 6 x 1 kg			78,14/1 kg

Sterilisation of media containing sugar

Media containing sugar or **malt extract**, particularly those with a low pH, must be sterilised with care. We recommend autoclaving at up to 118 °C for a maximum of 15 min. Please observe the guidelines given in the instructions for use.

The reasons are as follows:

a) Heating sugar in combination with amino acids (from peptone, meat extract, yeast extract, or similar) can result in **toxic Maillard reaction products** which may interfere with proliferation of micro-organisms.

b) Inclusion of different sugar molecules and sugar degradation products will cause premature chain termination and inhibit chain cross-linking. The **gelability of agars containing sugar** will thereby be reduced.

NZamine

for molecular biology

Component of nutrition media for molecular biological assays, particularly LB Broth.

Highly nutritive peptone, produced by pancreatic digest of Casein under distinct conditions. Best source of nitrogen and amino acids in nutrient media for molecular biological assays, particularly broth acc. to Luria/ Bertani (LB).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Basic Reagents for Nutrient Media

Peptone ex gelatin

pancreatically digested, for microbiology

Peptone produced from porcine skin by digestion with pancreatic extract. Gelatin pepton is low in fermentable carbohydrates, and is used in culture media especially for non-fastidious microorganisms and for fermentation studies.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Art. No.	Pack Qty.	Pack.	€
HP99.1	500 g	plastic	92,35
Original pack 6 x 500 g			87,73/500 g

Peptone ex meat

peptically digested, for microbiology

Extremely high-grade peptone, particularly nutritive.

Peptone from meat is gained from animal tissue by peptic digestion. It is used as a biological nutrient for tissue cultures, fermentations and for the production of vaccines.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 3

Art. No.	Pack Qty.	Pack.	€

The term **peptone** is used for all proteins digested by acid or enzymes. In addition, the source (e. g. 8986.1: Peptone ex Casein) and the digesting compound should be given (e. g. “tryptic”). Source of nitrogen and amino acids.

Tryptone is manufactured by digestion of casein with pancreas extract (pancreatic digest). Tryptone is rich in tryptophane, and an ideal source of nitrogen and amino acids used in a number of microbiological nutrient media (Art. No. 8952 and 6681).

NZamine also is manufactured by pancreatic digestion of casein. Being similar to tryptone it is often used as source of nitrogen and amino acids in nutrient media for bacterial growth in molecular biology (Art. No. CP76).

Proteose peptone is formed by hydrolytic cleavage of proteins from animal tissue, more complete that which occurs for peptones in general, but not strong enough to form single amino acids. Proteose peptone is rich for peptides with high molecular weight, beeing a high-grade component of microbiological nutrient media (Art. No. HP32).

Casamino acids originate from hydolysis of casein by acid. This compound is used as source of nitrogen and amino acids when completely hydrolysed protein is required, e. g. in proliferation assays or during production of vaccines and toxins (Art. No. AE41 and A157).

animal-free

Peptone ex soya (animal-free/GMO-free)

papainic digested, animal-free, GVO-free, for microbiology

Soya peptone (animal-free/GMO-free) is extracted by papainic digestion from soybean flour from non-genetically modified plants. Moreover, strict production guidelines guarantee that it is free from all animal substances, even TSE/BSE. Peptone ex soja (animal-free/GVO-free) complies with EG regulations 1829/2003 and 1830/2003. The corresponding certificates are available upon request.

Peptone ex soya is particularly characterized by its broad nutrient spectrum and high vitamin content. It is suitable for application in microbiology, tissue culture and fermentation.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Proteose Peptone

for microbiology

Rich component of microbiological nutrition media, particularly used for production of toxins and vaccines. From enzymatic digestion of animal tissue.

Highly nutritious source for the growth of a wide range of fastidious microorganisms or when bacteria have to be well fed.

Best suited for the production of vaccines, antibiotics, and other substances like enzymes, ideal for starter cultures and well usable for bacterial stocks.

Proteose peptone has been used for, e.g., the production of Diphteria toxin, *Pneumococcus* toxin and the toxins from *Clostridium botulinum* and *Cl. perfringens*, as well as for culture of *Neisseria, Haemophilus, Salmonella, Corynebacterium* and *Staphylococcus*.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Gelling Agents

Agar-Agar

Agar-agar is a carbohydrate found in the cell walls of blue and red algae. Therefore, agar-agar is obtained from dried algae. The basic units of agar are agarose and sulphated agaropectin.

Agar types

The designation Agar **Kobe I** derives from the geographical origin of the agar, which is the Japanese city of Kobe on the main island of Honshu. In former times, when agar was still traded in strips, threads or squares, agar was graded into three main quality groups:

Kobe I: top quality, pure white
Korea I: slightly inferior quality, slightly yellowish to light beige
China: inferior quality, yellow-beige
These terms and the associated differences in quality are now obsolete - for some time now, agar of consistent quality has been available from all parts of Asia. However, for reasons unknown, the designation Kobe I is used today to describe ground agar of very high quality which is used as a microbiological standard agar.
BioScience Agar forms clear gels and is of high purity without any residues that could hinder growth of transformed - and therefore stressed - GMOs. Hence, it is particularly recommended for production of agar plates for bioengeneering. **BioScience Agar** is used as gelating agent in our *Anhydrous Nutrient Media for Molecular Biology*.
In addition, the designation **bacteriological agar** has become an established definition for ultra-pure agar, which represents a preliminary stage of purified agarose and is manufactured for special microbiological applications.
Danish agar, also known as Furcelleran, is a saccharide-enriched carrageenan extracted from the red algae *Furcellaria fastgiata*.

Instructions:

Culture-Plates: 15 g/l medium;
approx. 30–35 ml medium is required for a 90 mm culture plate.
Top-Agar: 7 g/l medium.
The solution should be autoclaved for 20 min and the preparation carefully swayed to distribute the agar evenly. Cool the agar down to 50 °C before adding the antibiotic. Sway the agar solution again before casting the plates.
Any air bubbles on the surface of the culture plates can be removed with a bunsen burner flame. Once the agar has hardened, the plates should be stored top-down at 4 °C.

Agar-Agar, Kobe I

Kobe I, powdered, for microbiology

Standard-Agar for application in culture media for molecular biology (e.g. LB medium) and microbiology.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

Agar-Agar, BioScience

BioScience Grade, powdered

Agar of high purity for all culture media used in molecular- and microbiology. Recommended for plating in genetic engineering (GMOs).

- Highly pure Agar-Agar, essentially free of impurities that could hinder bacterial growth.
- Forms very clear gels.
- Particularly recommended for preparation of culture plates used for plating of recombinant bacteria (GMOs) during genetic engineering.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Agar-Agar, BioScience, granulated

BioScience Grade, granulated

Agar of high purity for all culture media used in molecular- and microbiology. Recommended for plating in genetic engineering (GMOs).

Granulated, dust-minimized Agar-Agar.

- Essentially free of impurities that could hinder bacterial growth.
- Forming very clear gels.
- Particularly recommended for preparation of culture plates used for plating of recombinant bacteria (GMOs) during genetic engineering.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

Art. No.	Pack Qty.	Pack.	€

Agar-Agar, bacteriological

highly pure, for bacteriology

For immune diffusion and electrophoresis, culture media for tissue cultures, bacteriology, mycology and cell culture.

- Qualitatively high-grade Agar which is clearly superior to bacteriological Agar in its purity.
- Forms very clear gels.
- Essentially free of impurities that could interfere with other products in culture media formulation. Free of bacterial inhibitors.
- Recommended in media to be used for the determination of susceptibility of microorganisms to antibiotics or drugs.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Agar-Agar, Noble quality

ultra pure, for bacteriology

Ideal for immunodiffusion and electrophoresis and as a medium for tissue and cell cultures, bacteriology and mycology.

Due to an addtionional purification process the product obtained has an excellent clarity, absence of color, excellent diffusion characteristics, absence of toxic inhibitors, very low ash content and other impurities.

- Excellent clarity
- Excellent diffusion properties
- No toxic inhibitors
- Very low impurities

Qualitatively high-grade Agar which is clearly superior to bacteriological Agar in its purity.

Forms very clear gels.

Essentially free of impurities that could interfere with other products in culture media formulation. Free of bacterial inhibitors.

Directions for use

Recommended in media to be used for the determination of susceptibility of microorganisms to antibiotics or drugs.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Agar-Agar, plant

Genetic engineering quality, for plants

For plant propagation and plant cell culture.

Plant culture agar

High-pure agar recommended for propagation of ornamental and economic plant species, as for *in vitro* genetic engineering in plant research and commercial applications.

The high gel strength of the agar allows usage at low concentrations of about 0.5 %. Forms very clear and transparent gels.

Usually 15 g/l are used.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.
WGK 1

Carrageenans

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydrogalactose polysaccharides and forming particularly clear gels. In order to polymerise, carrageenans require cations, while gel strength may be altered by addition of $MgCl_2$ or KCl.

Agar-Agar, danish

standardized carrageenan mixture, sugar-containing, powdered

Mixture of highly pured Carrageen extracts. For gelling of watery liquids like, e.g. media for cultivation of plants, and for special microbiological applications. Saccharated.

Each lot of this Carrageenan mixture is standardised with sugars and KCl to the gel strength noted in the type analysis.

Further information on analysis data see Chemicals A–Z.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Standardized by mono- or disaccharides and KCl.
Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

Art. No.	Pack Qty.	Pack.	€
4508.1	1 kg	plastic	149,45
Original pack 6 x 1 kg			141,98/1 kg
4508.2	5 kg	plastic	650,40

Please Note:

Being extracts from natural products, the properties (e. g. gelling behaviour, salt content) may vary from lot to lot. Further information on analysis data see Chemicals A–Z.

Carrageenan, kappa

highly pure

Strongly gelling Carrageenan of kappa type. Forms gels of high gel strength. For gelling of watery liquids like e.g. culture media for plants or animals. Manufactured from cultured and controlled sea weeds.

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydrogalactose polysaccharides.

Kappa Carrageenan is obtained by alkaline extraction from red algae (*Rhodophyceae*) of the order *Gigartinales*, purified by filtration and recovered by KCl precipitation. In ionic solutions, heat-solubilized kappa Carrageenan self-assembles into helical structures and gels during cooling, the gel parameters depending on the ions present: Potassium ions form rigid gels, calcium gels are strong but more flexibel.

WGK 1

Contains KCl.
Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

Original pack 6 x 500 g			213,47/500 g

Carrageenan, iota

highly pure

Weakly gelating Carrageenan of iota type. Forms soft gels. For gelling of watery liquids like culture media for plants or animals in general, and for gelling of dairy products in particular. Manufactured from cultured and controlled sea weeds.

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydrogalactose polysaccharides.

Iota Carrageenan is obtained by alkaline extraction from red algae (*Rhodophyceae*) of the order *Gigartinales*, purified by filtration and recovered by alcoholic precipitation. In solutions containing calcium ions, heat-solubilised iota Carrageenan self-assembles into helical structures and gels during cooling.

GELRITE®

Gelrite® for microbiology

Gelling agent for microbiological culture media. Alternative to Agar.

GELRITE® is a highly-purified, natural heteropolysaccharide which forms stable, agar-like gels when exposed to soluble salts. Compared to agar however, only about half the amount is required.

Advantages over agar:

- consistent product quality
- almost 100 % batch-to-batch conformity
- forms remarkably clear gels
- reduces preparation time as gels form faster
- remains stable even at high temperatures and is therefore also ideal for thermophilic microorganisms; gels can withstand repeated autoclaving without any changes to gel strength
- indicates no toxic contaminations (e.g. through phenols, as found in agar)
- is chemically inert against most media additives
- is resistant to enzymatic degradation
- is non-toxic (no signs of toxicity in rats exposed to a dose of 5.000 mg/kg)
- is very economical to use

GELRITE® has been specially developed as a gelling agent for microbiological culture media. It can however, replace agar in other applications, too.

Polymerisation of GELRITE® is enhanced in the presence of (bivalent) kations. It is therefore supplemented by $MgCl_2$ if a solid gel structure is required. Elevated salt concentrations increase gelling temperature (e.g. 500 mM Na^+ to approx. 68 °C with 1 % GELRITE®). When using very high salt concentrations like e.g. seawater, gelling capacity may be significantly reduced.

Chemical composition:
Linear polysaccharide comprising of O-acetylate glycuronic acid, glucose and rhamnose units.

GELRITE® is a highly-purified, natural heteropolysaccharide which forms stable, agar-like gels when exposed to soluble salts.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 2

Art. No.	Pack Qty.	Pack.	€

MacConkey	7,0 g/l	0,75 g/l
Nutrient broth	8,0 g/l	0,75 g/l
Plant agar	2,0 g/l	-
Salmonella Shigella	5,5 g/l	-
Seawater (High Salt solution)	non recommandé	-
Triple Iron Sugar	6,0 g/l	0,75 g/l

Antibiotics/Antimycotics

ROTI®Antibiotic Discs

The range of ROTI®Antibiotic Discs is designed for the qualitative analysis of the sensitivity of bacteria or fungi to anti-microbiological reagents by means of *in vitro* diffusion methods.

A fresh starter culture is adjusted at a cell density of 1×10^6–5×10^6 cfu/ml (in acc. with McFarland Standard 0,5) and applied evenly to a culture medium plate with Mueller-Hinton agar (Art. No. X926; for fungal cultures add 2 % glucose + 0,5 µg methylene blue). The antibiotic discs are individually applied to the plate using sterile tweezers or a dispenser (Art. No. 1505).
After a suitable period of incubation, the size of the inhibiting zone around the discs is measured. The diameter of the inhibiting zone is assessed using standardised values in the available standards and databases and is an indicator of the culture's sensitivity to the antibiotic.

Reliable quality for microbiology, molecular biology and cell culture.

Denoted concentrations of working solutions are guiding values and have to be established for each application and cell type.

Actinomycin D

≥950 µg/mg, for biochemistry

Peptide antibiotic. Pure actinomycin C_1.

Specific inhibitor of DNA-dependent RNA-synthesis. Inhibition is caused by intercalation in dsDNA and, therefore, is not specific for procaryotic cells.

Standard application is the preparation of cDNA.

Actinomycin D is cytostatic, toxic and sensitive to light.

Stock solution should be kept in a bottle covered with foil.

Stock solution 10 mg/ml in DMSO or methanol.
Storage of stock solution: protected from light at –20 °C
Working concentration: 50 µg/ml

$C_{62}H_{86}N_{12}O_{16}$ · M 1255,5 g/mol

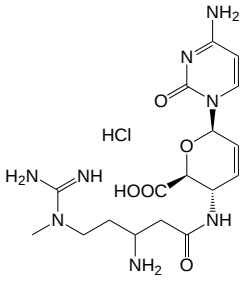
Bacitracin

≥60 I.U./mg, Ph. Eur., for biochemistry

Peptide antibiotic and protease inhibitor

Inhibits cell wall biosynthesis in gram-positive bacteria and *Neisseria* by interaction with murein biosynthesis. Also used as protease-inhibitor for inhibition of the gluthatione-insuline-transhydrogenase or some endopeptidases.

Working concentration: 0.1–1 mg/ml (0.07–0.7 mM).
Bacitracin is very stable in a pH range of 4–5, but is rapidly inactivated in pH of over 5 at room temperature. Do not use at a pH of over 8.



Stock solution: 100–1000 mg/ml in H_2O or ethanol.
Storage of stock solution at –20 °C.

Cefoxitin sodium salt

≥98 %, for biochemistry

Cephalosporin-antibiotic

Semi-synthetic second generation cephalosporin derivate. Cefoxitin interferes with peptidoglycan layer composition during cell wall synthesis and is effective against a broad spectrum of gram-positive bacteria. Its effectivity against gram-negative bacteria is lower. Also active against anaerobic bacteria. Zone of inhibition analysis with Cefoxitin is used to detect methicilin resistance. Stable against cleavage by β-lactamase.

Sensitive to light and temperature!
Stock solution: 100 mg/ml in water.
Store stock solution in the dark at –20 °C (durability 30 weeks).

Cycloheximide

ROTICHROM® CHR ≥98 %, for biochemistry

Glutarimid antibiotiotic, fungicidal

Antibiotic isolated from *Streptomyces griseus*. Its main biological activity is translation inhibition in eukaryotes by binding to the 60S subunit of the ribosomes. Cycloheximide inhibits binding of Aminoacyl-tRNA to the ribosomes, Peptidyltransferase, detachment of deacylated tRNA, and translocation of Aminoacyl-tRNA, resulting in cell growth arrest and apoptotic cell death.

Not effective against bacteria. Cycloheximide is widely used for selection of cycloheximide-resistant strains of yeast and fungi, for inhibition of eukaryotic contaminants in bacterial microbiology, for controlled inhibition of protein synthesis in cell culture and for detection of short-lived proteins, and for apoptosis induction or facilitation of apoptosis induction by death receptors.

Stock solution: 10 mg/ml in H_2O or acetone.
Storage of stock solution at –20 °C.
Working concentration: 1–10 µg/ml.
Note: Inactivated at basic pH values. Heat- and acid stabile. No inactivation after 15 mins. 95 °C in pH 7.0.

D-Cycloserine

≥90 %, for biochemistry

Bacteriostatic antibiotic

Bacteriostatic against gram negative and gram positive bacteria and some protozoans by inhibition of synthesis of the cell wall.

Stock solution: 10–100 mg/ml in H_2O and 96 % ethanol.
Stability of stock solution: Neutral or acidic solutions are unstable. Sodium carbonate buffered solutions (pH 10) may be stored at +4 °C for approx. 7 days without loosing activity.
Recommended storage of stock solution at –20 °C (6 months).
Working concentration: 20–100 µg/ml.
Note: Optimum of activity at pH 6.4–7.4. It is recommended to prepare fresh solutions each time for use.

Erythromycin

≥93 %, for biochemistry

Macrolide antibiotic

Erythromycin is a macrolide antibiotic (macrocyclic lactone antibiotic) which is produced from an actinomycete strain (*Saccharopolyspora erythraea*, formerly known as *Streptomyces erythraeus*). Its spectrum of activity is similar to but broader than that of penicillin, which means that erythromycin is also very effective against bacteria such as legionella or mycoplasma.

Erythromycin binds to the bacterial 70s rRNA, interferes with the aminoacyl translocation and consequently inhibits biosynthesis. It is used in microbiological fungal culture to prevent bacterial growth and as a selection marker for selection on bacteria with an erythromycin resistance-mediating gene cassette (*erm*).

Stock solution: 10 mg/ml in ethanol.
Store stock solution at –20 °C (2 months).
Working concentration: 0.1–5 µg/ml.
pH-optimum at 8.5. Only stable for approx. 24 hours at pH-range 7 to 7.5. Extremely unstable below pH 6.0.

Geneticin disulphate (G418 Sulphate)

≥650 U/mg, for biochemistry

Aminoglycoside antibiotic

Inhibits protein biosynthesis by binding to ribosomes, particularly to eukaryotic 80S ribosomes. Through interference with the tRNA docking process, sequence errors appear and the elongating peptide chain is truncated. Geneticin disulphate unspecifically effects all cells, and is highly toxic for eukaryotic cells. Resistance is mediated by the bacterial enzyme aminoglycoside–3–phosphotransferase.

Application: Selection of transfected eukaryotic cells.
Resistance gene: *Neomycin.*

Stock solution: 10–50 mg/ml in H_2O or culture medium.
Storage of stock solution: –20 °C.
Working concentration: 50–1000 µg/ml, has to be established for each cell type.

The History of Antibiotics

In the history of mankind there have always been highly developed cultures who have possessed remarkable knowledge. For example, surgeons in the ancient world and Middle Ages placed mouldy rags on wounds to prevent infection.
First observations of antibiotic effects in modern times were made by the French chemist Louis Pasteur in the 19th century, who discovered that certain bacteria could kill anthrax germs.
The German bacteriologist Rudolf von Emmerich isolated the antibiotic medium pyocyan (cholera and diptheria) around 1900 and in 1910 experiments carried out by the German doctor and chemist Paul Ehrlich led to the development of salvarsan (syphillis and tropical diseases).
Penicillin was discovered by accident in 1928 by Alexander Fleming in *Penicillium notatum* mould fungus cultures when he observed that in laboratory cultures *P. notatum* inhibited the growth of vicinal bacteria colonies. Streptomycin followed in 1943.
The first antibiotics were isolates from bacteria cultures. The preparations used nowadays, however, are almost exclusively of chemical origin, which has enabled specialisation and optimisation.

Hygromycin B

>950 µg/mg, for biochemistry

Aminoglycoside antibiotic.

Inhibits protein biosynthesis in pro– and eukaryotes by altering translocation during ribosomal chain elongation, therefore resulting in frame reading errors and abortion of chain elongation. Selection marker for *hph* transfected cells.

Stock solution: 50–400 mg/ml in H_2O or PBS.
Storage of stock solution at –20 °C.

Nourseothricin

≥85 %, for biochemistry and microbiology

Broad-band antibiotic and antimycotic of viruses, bacteria and fungi.

Antibiotic of the streptothricine family, effective against a broad spectrum of viruses, bacteria and fungi. Used as selection antibiotic for genetically modified bacteria, yeasts, filamentous fungi, protozoa and plants.

Nourseothricin inhibits biosynthesis and induces miscoding. Resistance is mediated by the *sat1* encoded N-acetyltransferase, which inactivates nourseothricin by acetylation of the β-amino group of the β-lysin.

Streptothricine F: n=1 (MW 599.59), Streptothricine D: n=3 (MW 857.95)

Recommendation: One package Nourseothricin should be solubilized in whole and the stock solution should be frozen in aliquots. By removing the overlaying argon during weighing, the stability of the lyophilsate is reduced.

Stock solution: 100 mg/ml in water
Storage of stock solution at –20 °C
Working concentration: ca. 100 µg/ml
One package Nourseothricin should be solubilized in whole and the stock solution should be frozen in aliquots.

Novobiocin sodium salt

≥850 µg/mg, for biochemistry

Bacteriostatic antibiotic, HSP90 inhibitor.

Reduces growth of gram-positive bacteria by inhibition of initiation of DNA-synthesis via binding to ATP-binding sites of gyrase and topoisomerase. Novobiocin also interacts with the C-terminal ATP-binding site of HSP90, hence inhibiting its Chaperon quality.

Also well suited as additive to microbiological nutrient media. Adding 40 mg/l Novobiocin during selective detection of coliform bacteria on Brilliant Green Bile broth (Art. No. CL06.1) efficiently reduces the growth of attendant flora (Alcaide et al., 1982, *J. Appl. Bact.* 53:143-6).

Pen/Strep-PreMix

CELLPURE®

Antibiotic compound of penicillin, streptomycin and stabilising sodium chloride for application in cell culture.
For elimination and prevention of bacterial contamination in cell culture.

Mechanism

Penicillin inhibits cell wall biosynthesis in Gram-positive bacteria. Streptomycin produces the antibiotic effect in Gram-negative bacteria through inhibition of the translation.

Directions for use

The premixed powder is extremely stable during storage at room temperature and, due to the excellent solubility of the reagents in pyrogen-free water (e.g. Art. No. 3255.1), it can be mixed quickly to a 100x stock solution. The dissolved antibiotics are stable for approx. 3 days at 37 °C. 50 ml of the 100x stock solution can be obtained directly by adding 49.2 ml pyrogen-free water (Art. No. 3255).
We recommend application in a 1:100 dilution. The stock solution mix (100 ml) is sufficient for 10 l medium.

The final concentration of the 100x stock solution is:

- Penicillin: 10.000 I.U. / ml
- Streptomycin: 10 mg / ml
- Sodium chloride: 0.9 %

Endotoxins

Endotoxin content per vial: ≤210 I.U. complies ≤4.2 I.U. / ml

PreMix powder for 2x 50 ml 100x stock solution (for 10 l medium total).
Storage of stock solution: in 1–10 ml aliquots at –20 °C.
Comes with original seal.

Storage temperature: +4 °C

► Radicicol see page 185

Rifampicin

≥90 %, for biochemistry

Bacteriostatic antibiotic

Rifampicin inhibits bacterial DNA-dependent RNA-polymerase and consequently prevents transcription. Its spectrum of activity is strictly bacterial (the eukaryotic DNA-dependent RNA-polymerase can only be inhibited at extremely high concentrations) and rifampicin is particularly very effective against mycobacteria. Enterbacteria, acinetobacteria and pseudomonades are resistant against rifampicin.
The resistance-mediating genes can be applied as selection markers in molecular biology.

Light-sensitive. Store in the dark!
Stock solution: 100 mg/ml in chloroform or DMSO, 15 mg/ml in methanol, 1 mg/ml in water (pH 7,3)
Store stock solution at -20 °C, is stable for approx. 2 weeks in DMSO when stored in the dark at 4 °C
Working concentration: 20-200 µg/ml

Art. No. 4163.3: A stock solution with a concentration of 100 mg/ml can be prepared directly by adding 5 ml chloroform or DMSO.

Ticarcillin disodium salt

≥85 %, for biochemistry

β-Lactam antibiotic

Ticarcillin belongs to the carboxy penicillin family, the only difference to carbenicillin being a group of a side chain. It is inactivated through β-lactamase. Ticarcillin inhibits bacterial cell wall synthesis by inhibiting the transpeptidase.

Stock solution: 100 mg/ml in water
Store stock solution at –20 °C
Working concentration: 25–250 µg/ml
The stock solution should be cooled immediately as its activity decreases quickly and ticarcillin may precipitate.

Cryo-Conservation

S ready-to-use

ROTI®Store cryo vials

sterile, ready-to-use

Suitable for freezing all types of microorganisms, including recombinant bacteria.

ROTI®Store cryo vials are ideal for preparing freezing stocks from different microorganisms, even DMSO-sensitive organisms. The stocks are protected by a special cryo medium during freezing.

Optimally suited for cryopreservation of recombinant bacteria in genetic engineering.

- Preparation of cryogenic cultures
- Safe storage
- Simple recultivation
- Ø 12 mm, length 49 mm.

Directions for use

To freeze, pipette and mix 0.5 ml fresh culture solution into a ROTI®Store cryo vial. Remove the supernatant and freeze the vial. To recultivate, take one of the beads and inoculate the desired culture medium.

Store at –80 °C or in liquid nitrogen.
Short-term storage for a few days at –20 °C is possible.

Also suitable for conservation of marine microorganisms, even during field work (Siebert *et al.*, *Appl. Environ. Microbiol.* 2004 (70) 5912-5).

One cryo vial contains 25 beads in cryo medium suitable for 25 recultivations per cryogenic culture.

Storage temperature: +4 °C

S ready-to-use

ROTI®Store yeast cryo vials

sterile, ready-to-use

Ideal for freezing yeast and monocellular moulds.

ROTI®Store yeast cryo vials contain a special yeast cryo medium, developed for safe storage of yeasts such as *Saccaromyces cerevisiae* or *Candida albicans*.The yeast is protected by a special yeast cryo medium during freezing.

- Preparation of cryogenic cultures
- Safe storage
- Simple recultivation
- Ø 12 mm, length 49 mm.

Directions for use

Cryo-conversation has been succesfully tested for *S. cerevisiae*, *C. albicans*, *C. sake*, *C. tropicals*, *Zygosaccharomyces rouxii*, *Dekkera bruxellensis* and *Malesezzia furfur*.

Long-term storage at –80 °C or in liquid nitrogen, short-term storage for a few days at –20 °C is possible.

Suitable for preparing 50 different cryo-cultures and for up to 25 recultivations per cryogenic culture.

Storage temperature: +4 °C

Replicator stamp black

The replicator stamp enables the transfer of bacterial or yeast colonies from one culture medium plate to another.

In order to duplicate the colony plates, fix one of the sterile tissues on the stamp with the aluminium ring. Then press the top side of the colony plate gently onto velvety surface of the stamp. Use a new plate to produce the duplication.

Size of one tissue: 15 x 15 cm.

Technical specifications:

Art. No.	X994.1
Ø	81 mm
Height	69 mm
Suitable for	petri dishes of 90 to 100 mm Ø

The stamps can be disinfected with ethanol.
Delivery incl. aluminium ring and 12 autoclavable tissues.

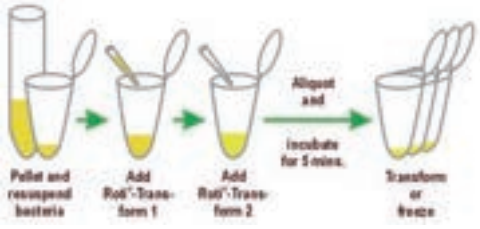
Kit for Preparation of Competent Cells

S ready-to-use



ROTI®Transform

sterile, ready-to-use

For preparation of competent *E. coli*.

Directions for use

Protocol:
1. Resuspend cells in fresh, cold LB-medium
2. Add ROTI®Transform 1
3. Add ROTI®Transform 2 and incubate for 5 minutes on ice.

The kit contains

ROTI®Transform consists of 45 ml ROTI®Transform 1 (Art. No. P041) and 5 ml ROTI®Transform 2 (Art. No. P042).

User information

Long-term Storage of the Kit at –20 °C.

Storage for use:
Reagent 1: Short-term storage may be done at 4 °C.For long-term storage of over 14 days we recommend a storage temperature of –20 °C.
Reagent 2: Storage at 4 °C.

One kit is sufficient to produce competent *E. coli* for 500 transformations.
Contents of this Kit may not be bought separately.

Storage temperature: –20 °C
Transport temperature: ambient temp.

Accessories for Antimicrobial Susceptibility Testing

McFarland turbidity standards

Turbidity Standard

The cell density is adjusted in the simple comparison to the standard. This can be directly performed visually or by measuring with a spectrophotometer.

The turbidity value of the standard of 0,5 MFU (McFarland Units) corresponds to approximately a culture density of 1,5 x 10^8 cells/ml. This cell density is specially needed as bacterial inoculum for the antibiotic susceptibility test.
The absorption is measured at a wavelength of 625 nm.

ready-to-use

McFarland BSS 0.5

for microbiology

Turbidity Standard for adjusting the density of a bacterial suspension.

The McFarland BSS Standards are used as turbidity standards since 1907 to produce an expected reproducible cell density of a bacterial suspension.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Not a medical device / Not an IVD product

Xylene Alternatives

ROTI®Histol on base of limonene

The alternative solvent for histology and cytology. Excellent for all histological hand work. Replaces clearing agents like xylene or toluol without the need for changing working procedures.

ready-to-use

ROTI®Histol

ready-to-use, for histology

Clearing agent on the basis of limonene. For dewaxing of histological sections. Alternative product for xylene.

ROTI®Histol is a natural product, manufactured from untreated orange peel. It consists of 96–98 % limonene, a terpene with a characteristic odour of lemon or orange and can be mixed with IPA, butanol, ethanol and all standard embedding media. **No harmful vapours!**

- Clearing agent on the basis of limonene
- **Alternative product for xylene**
- Particularly suitable for histological work by hand
- Compatible with the mounting medium ROTI®Histokitt

ROTI®Histol replaces current clearing agents without the need for changing working procedures. The tissue samples are treated particularly gently – they remain smooth and do not become brittle.
ROTI®Histol is particularly suitable for histological work by hand which usually exposes the user to solvent vapours in high concentrations.
ROTI®Histol produces excellent results with **ROTI®Histokitt** mounting medium **(Art. No. 6638)** and special paraffins such as ROTI®Plast (Art. No. 6642).

ROTICLEAR® on the Basis of Aliphatic Hydrocarbons

The alternative product for use in histology and cytology. ROTICLEAR® is a special formulation to replace toluene, xylene and trichloromethane. Excellent for dewaxing histological sections.

ready-to-use

ROTICLEAR®

ROTICLEAR® ready-to-use, for histology

Clearing agent of aliphatic hydrocarbons, practically free from aromatic compounds. For dewaxing of histological sections.
Alternative product for xylene.

ROTICLEAR® consists of a mixture of aliphatic hydrocarbons with only little own odour. It is **practically free from aromatic compounds** (≤0,005 %) and can be mixed with IPA, butanol, ethanol and acetone.

- Clearing agent of aliphatic hydrocarbons
- **Alternative product for xylene**
- Practically free from aromatic compounds
- Short evaporation period
- Use in automates without any problems
- Compatible with the mounting medium ROTI®Mount

ROTICLEAR® can be used like xylene. The absorption capacity for paraffin is even better than that known for xylene. Therefore, water baths for removing the paraffin need not be changed so frequently. Due to a short evaporation period, ROTICLEAR® enables fast and effective working. It can also be used in automates without any problems.
ROTICLEAR® produces excellent results with the mounting medium **ROTI®Mount (Art. No. HP68)**. After clearing with ROTICLEAR® the sample can be embedded in ROTI®Mount immediately.

Please contact us for your free sample!

Xylene

Xylene is the typical solvent in histology. Carl ROTH xylenes have been used very successfully in histology for dewaxing histological sections and as clearing agent.

Xylene can be used together with **ROTI®Histokitt II mounting medium (Art. No. T160)** and Carl ROTH paraffins such as ROTI®Plast special paraffin (Art. No. 6642).

Xylene - Summary

Product name	Purity	Art. No.	Pack Qty.	€

		2662.2	2.5 l	41,95
		2662.5	5 l	74,20
		2662.3	10 l	117,20
		2662.4	25 l	241,90

For additional product data and safety information, see chapter Chemicals A–Z.

Please note:

Xylene can only dissolve a limited amount of paraffin, it should therefore be changed frequently. Please also note that the solubilizing process is often very slow at low temperatures. We recommend working in a warming cupboard at 25–30 °C.

Our Tip:

You can use a pipe wrench to open the solvent canister 10 l and 25 l. However, it's much easier and simpler with our **barrel and keg key** (Art. No. 0398).

Isopropanol as Clearing Agent

Isopropanol is well suited as clearing agent for paraffin-embedding, because it is compatible to melted paraffin: After dehydrating with isopropanol the sample is incubated in a mixture of isopropanol abs. and paraffin (1:1) at approx. 60 °C. After a further incubation step with pure paraffin, the sample is embedded as usual.
This method is particularly suitable to smooth organs. Since embedding can start immediately after alcohol step, the working process is shortened significantly.

HCl-ethanol solutions

Hydrochloric acid in ethanol

After staining tissues are rinsed with HCl-ethanol solution to remove excessive stain. This decolourisation is selective for certain tissue structures retain the stain better than others (differentiation).
HCl-ethanol solution is used for regressive hemalum staining, but also for detection of mycobacteria and other stains.

ready-to-use

HCl-ethanol solution 0.75 %

0,75 % HCl in ethanol, ready-to-use, for histology

Differentiating solution for histological staining.

Solution of 0,75 % hydrochloric acid in ethanol 70 %.

Decalcifier

Tissues containing solid material such as bones or keratin are to be decalcified before paraffin embedding. Usually the specimens are treated with acids of different concentrations and mixtures.

An especially gentle method is decalcification with EDTA solution.

ready-to-use

Decalcifier soft

SOLVAGREEN® ready-to-use, for histology

Decalcifier solution on base of EDTA.
Used for gentle decalcification of bones and other calcified tissues.
The solution is also suitable for immunological applications.

The solution contains 25 % EDTA.

The process of decalcification takes more time than acid decalcification (see Decalcifier standard, Art. No. 6483), e.g. bone biopsies need approx. 3–4 days. The procedure can be accelerated by using a magnetic stirrer. The decalcification takes place in a weakly basic milieu. Nucleic acids and enzymes are not affected; therefore, the solution is also suitable for immunological applications.

UN no. 1824 · ADR 8 III · WGK 2

6484.4	5 l	plastic	145,15
Original pack 2 x 5 l			137,89/5 l

ready-to-use

Decalcifier standard

ready-to-use, for histology

Acid-based decalcifier. Contains trichloracetic acid and formalin.
Used for acid decalcification of bones and other calcified tissues.

The solution contains trichloroacetic acid and formalin and, therefore, has also fixing qualities. Nevertheless, we recommend sufficient fixing of specimens before decalcifying for trichloroacetic acid may cause morphological changes in unfixed tissue.

The length of the decalcification process depends on the specimen's size and type. Little bones (diameter a few mm) need 1–2 days for complete decalcification.
The decalcifier standard is not suitable for immunological applications. We recommend our Decalcifier soft (Art. No. 6484) on base of EDTA.

Weise buffer concentrate 100x

Stabilized buffer concentrate for the preparation of buffer solution according to Weise.

- Ready for use immediately – no dissolving of tablets or powder
- Microfiltered solution – no disturbing suspended particles
- Economical use – **10 ml concentrate on 1 l distilled water (= working solution)**
- Demand-oriented packaging – pouches or bottles

Buffer solution for diluting staining solutions (e.g. Giemsa stock solution) and for rinsing during the staining process.

Buffer solution according to Weise is a phosphate-buffered salt solution which is mainly used for staining blood and bone marrow smears, e. g. for diluting the Giemsa stock solution in Pappenheim staining.
The buffer concentrates are available in three different pH variants. The prepared solutions are stable for approx. 4 weeks.

Fixation

Formalin-free Fixing Solution

An adequate substitute for formalin on base of hexamethylene tetramine. ROTI®Histofix ECO Plus is classified as non-hazardous.

ready-to-use

ROTI®Histofix ECO Plus

SOLVAGREEN® ready-to-use, formalin-free

For fixing of histological and immunochemical specimens. Formalin substitute.

ROTI®Histofix ECO Plus is a ready-to-use, aqueous solution on the basis of hexamethylene tetramine. The solution has similar good fixation properties like formaldehyde, but is, unlike formaldehyde, classified as non-toxic.

- Formaldehyde-free, non-toxic fixative
- Good fixation properties
- pH 4,5–5,0
- No denaturing effect, e.g. shrinkage or crosslinking
- Adequate substitute for formaldehyde

The original morphology of the tissue is preserved during the fixation process. The protein molecules are cross-linked in a reversible way, their structures are preserved. That is especially important for antigen-antibody reactions. Samples are – in contrast to other fixative media – free of artefacts such as shrinkage of tissue or irreversible protein crosslinking. The solution is therefore ideal for immunohisto-chemistry. All conventional staining processes can be carried out following fixation.

ROTI®Histofix ECO Plus is provided with a fragrance for better identification (<1ppm).

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

WGK 1

Formalin-free, non-toxic solution. For fixing of histological specimens. Pleasantly aromatic odour. Formalin substitute.

ready-to-use

ROTI®Histofix 4 %, prefilled containers

4 % formaldehyde, ready-to-use, phosphate buffered, pH 7

Fixative for histology, prefilled in screw cap containers. Stabilised with methanol.

Neutral buffered formaldehyde solution (pH 7), prefilled in screw cap containers, packaged in a cardboard shipping box. The containers are labelled, specimen data can be added.

- Specimen can be added directly
- Sample is securely packaged and ready for shipment within a short time
- Reduced health risk for user because no diluting and decanting of concentrated formaldehyde solution is necessary
- Time saving, containers are ready-to-use

Storage temperature: +15 to +25 °C

WGK 3

Danger H302-H317-H341-H350

Stabilised with methanol.
Do not store under 15 °C!

Not a medical device / Not an IVD product

Art. No.	Pack Qty.	Packaging	Pack.	€
3105.2	54 unit(s)	54 x 50 ml	cardboard	74,75
3105.1	100 unit(s)	100 x 10 ml	cardboard	112,90

Do not store formaldehyde solutions below +15 °C!

Experience shows that low temperatures support polymerisation to paraformaldehyde. Small amounts of solids (fine precipitation) can be filtered off, the formaldehyde solution is still fully functional. In case of major amounts of solids, however, the solution should be discarded, for the concentration of formaldehyde is too much reduced.

ready-to-use

ROTI®Histofix 4,5 %, prefilled containers

4,5 % formaldehyde, ready-to-use, phosphate buffered, pH 7

Fixative for histology, prefilled in screw cap containers. Stabilised with methanol.

Neutral buffered formaldehyde solution 4,5 % (pH 7), prefilled in screw cap containers, packaged in a cardboard shipping box. The containers are labelled; specimen data can be added.

- Specimen can be added directly
- Sample is securely packaged and ready for shipment within a short time
- Reduced health risk for user because no diluting and decanting of concentrated formaldehyde solution is necessary
- Time saving, containers are ready-to-use

To prepare a 4 % paraformaldhyde solution:

Mix 4 g of paraformaldehyde into 60 ml distilled water (milky liquid), heat with frequent agitation to 60 °C. Add drop wise 1 N NaOH, at pH 7 the solution becomes clear. Add distilled water until the volume reaches 100 ml then let it cool down. The solution is to be used immediately, because it is not stable at room temperature. Store in aliquots at –20 °C, is stable for approx. 6 months.

Fixing Agents

Paraformaldehyde

extra pure

Fixative

Paraformaldehyde is a formaldehyde polymer. It is used for applications requiring a formaldehyde solution without stabilising additives.

Fixation

Fixing agents: In order to stop their natural degradation process, specimens must be fixed as quickly as possible after extraction. This is usually done with pure fixing agents such as formalin or alcohol. The solutions are easy to use and lead to good results. Formalin, despite its smell and harmful properties, is still the universal fixing agent, whereas alcohol has proved to be best when fixing smears. To get fixing agents with special properties, mixtures from different fixing agents should be used. This also will compensate for the distinct handicaps of many fixing agents, e.g. shrinkage caused by high-percentage alcohol is greatly reduced when glacial acetic acid is added.

Fixing process: Alcohols, various salts and acids denature the protein molecules. The structurally altered molecules form cross-links between each other. In contrast, formalin does not denature. It binds directly to proteins and cross-links the molecules actively with each other.
Fixation of pure lipids or carbohydrates is extremely difficult. When using conventional fixing agents, they are only trapped in the tissue and often washed out in subsequent rinsing steps. Better results are achieved with frozen sections. In electron microscopy lipids can be fixed with osmium tetraoxide.

Glutaraldehyde for Electron Microscopy

Glutaraldehyde for Electron Microscopy

Glutaric dialdehyde, 1,5-Pentanedial, Glutaral

$C_5H_8O_2$

Fixation with glutaraldehyde is similar to the fixation process with formalin. Optimal results can be achieved with a concentration of 1 to 6 %.

Product name	Pack.	Art. No.	Pack Qty.	€
Glutaraldehyde 50 %	plastic	**4995.1**	500 ml	94,50
		4995.2	2.5 l	392,40
Glutaraldehyde 25 %	plastic	**3778.1**	1 l	85,50
		3778.2	5 l	354,75
	cardboard	**4157.2**	10 ml	83,35
	glass	**4157.1**	25 ml	22,50
		4157.3	50 ml	34,95

For additional product data and safety information, see chapter Chemicals A–Z.

Storage of Glutaraldehyde

Ideally at 2–8 °C under protective gas (argon or nitrogen).
Do not freeze!

Osmium Tetraoxide for Electron Microscopy

Osmium tetraoxide

Osmium(VIII) oxide, Osmic acid

OsO_4

Osmium tetraoxide is suitable for fixing lipides and proteins. Because of the low penetration power, application is primarily limited to ultra thin techniques with small tissue samples.

Product name	Pack.	Art. No.	Pack Qty.	€
Osmium tetraoxide	glass	**8371.1**	100 mg	56,90
		8371.2	500 mg	138,70
		8371.3	1 g	217,70
Osmium tetraoxide solution 2 %	glass	**7436.1**	5 ml	52,15
Osmium tetraoxide solution 4 %	glass	**8088.1**	5 ml	81,60

For additional product data and safety information, see chapter Chemicals A–Z.

To prepare a 1–4 % solution of osmium tetraoxide, Art. No. 8371:

- Score the glass ampoule in centre (e. g. with glass cutter Art. No. 8209.1)
- Open it carefully at the section
- Draw the crystals into a sealable glass jar
- Add the needed amount of distilled water
- Place the sealed jar into an ultrasonic bath, the dissolution process requires 1–2 h
- Store the solution in aliquots at –20 °C in a well-sealed container

Please note: OsO_4 vapours damage the cornea and the mucous membranes of the mouth and the nose. Therefore, working with protective equipment in a fume cupboard is required!

Embedding

Paraffins

ROTI®Plast Special paraffin

Paraffin in droplets

- High-purity paraffin
- Top-quality for routine applications
- Defined melting range
- Excellent embedding and cutting properties
- Guaranteed tested quality

ROTI®Plast is a special paraffin of highest quality without any additives. It penetrates the tissue quickly, completely and gives it its plasticity.

Also available with addition of DMSO and polymers, melting range 56–58 °C (Art. No. 6643).

ROTI®Plast

100 %, for histology

Tissue embedding medium composed of highly purified paraffin

Paraplast®

Paraffin in droplets

Paraplast® is recommended for general tissue embedding. It is composed of a refined mixture of highly purified paraffin containing plastic polymers of regulated molecular weights. This provides improved tissue infiltration and superior quality sections with minimal compression.
Paraplast® gives brittle, difficult-to-section tissue an innate elasticity, producing excellent, wrinkle-free sections.

Our Tip:

Heat Paraplast® paraffin to maximum 62 °C.
Higher temperatures may damage the synthetic additives.

Paraplast®

for histology

LÖFFLER'S methylene blue solution is an aqueous solution.

Applications

The solution is used for staining bacteria, fungi and blood parasites in blood smears, e.g. together with carbolic fuchsine solution (Art. No. A130) for Ziehl-Neelsen staining (detection of TB bacteria). Furthermore, it is used as a vital staining agent for selective staining of nuclei during counting of eukaryotic cells (e. g. yeast cells).

May-Gruenwald's solution

for microscopy

For differential staining of blood smears and cytological specimens.

May-Gruenwald's solution is a methanolic solution of eosin methylene blue. Due to the high concentration of methanol, the specimens are fixed at the same time (recommended residence time: 3 min). May-Gruenwald's solution is used for differential staining of blood smears and cytological specimens.

ready-to-use

Nuclear fast red aluminium sulphate solution

0,1 %, for microscopy

For visualising nuclei e.g. during Elastica Staining.

Nuclear fast red aluminium sulphate solution has a wide range of applications e. g. as counterstaining after histochemical reactions such as Berlin blue staining, after silver staining or during alcian blue or light green staining.
It is also used for staining of nuclei during Elastica staining – a staining method for reproducing elastic fibres in tissue samples.

Nuclear fast red aluminium sulphate solution stains cell nuclei red.

Goldner's staining solutions

Goldner's staining solutions are used to visualise connective tissue in Masson Goldner trichrome staining.
The dispersity, the different molecular sizes of the dyes, plays a decisive role. Finely dispersed dyes such as Ponceau and Orange G penetrate quickly into structures, more coarsely dispersed dyes such as acid fuchsin and light green penetrate more slowly and stain coarse structures first.

Staining protocols

can be found on the internet next to the product description.

Staining PAS (Schiff's Periodic Acid)

The PAS reaction (Periodic acid-Schiff reaction) is a histochemical staining in which, in particular, carbohydrate-containing components such as glycoproteins, cellulose, mucins and glycogen are visualised. These substances are found in connective tissue fibres (collagen), basement membranes, cell walls (glycocalyx) and in neutral mucus (gastric mucus). PAS staining is also used to visualise glycogen-rich cells in the liver or in muscle tissue and to detect PAS-positive microorganisms (fungi).

ready-to-use

PAS staining kit

for microscopy

Staining kit for Periodic Acid Schiff (PAS) staining, incl. instructions for use.

Periodic Acid Schiff staining is generally used for detecting carbohydrates in tissue.

Directions for use

Staining is carried out in 3 steps: Periodic acid transforms 1.2 glycol groups to aldehyde groups, which are stained with Schiff´s reagent. Hemalum solution performs counter staining of nuclei.
Result: Carbohydrates red, nuclei blue-violet.

The kit contains

Periodic acid solution 1 % (Art. No. HP00), Schiff´s reagent (Art. No. X900), Hemalum solution acid acc. to Mayer (Art. No. T865) Contents of this kit may be bought separately.

Storage temperature: +15 to +25 °C

Bacteriological Staining

Staining of Acid-fast Bacteria

Acid-fast bacteria (e.g. Mycobacteria) cannot or only difficult be stained by usual staining methods due to the high proportion of lipids in their cell walls.
The most popular method for staining of acid-fast bacteria is the hot staining method acc. to Franz Ziehl and Friedrich Neelsen (Ziehl-Neelsen staining), in which the cell walls are “melted” by heating.

Furthermore cold staining methods have been developed like Kinyoun, Gabett or Ziehl-Neelsen (cold) to avoid harmful vapours resulting in the hot staining method.

ready-to-use

Ziehl-Neelsen staining kit

for microscopy

Staining kit for visualising acid-fast bacteria (e.g. pathogen of TB *Mycobacterium tuberculosis*), incl. instructions for use.

Gram Staining

Gram staining is the most important technique for differentiation and identification of bacteria. It was developed by the Danish bacteriologist Hans Christian Gram (1853-1938).
Due to the structure of their cell walls nearly all bacterial species can be differentiated in gram-positive and gram-negative bacteria.

ready-to-use

Gram staining kit

for microscopy

Kit for differentiation of gram-positive and gram-negative bacteria, incl. instructions for use.

This classical staining method allows a quick differentiation of gram-positive and gram-negative bacteria. Subsequently a specific treatment with antibiotics is possible.

Directions for use

In the first step bacteria are stained by Carbol gentianaviolet and Lugol solution. Afterwards gram-negative bacteria are decolourised by Gram's decolourising solution. In the last step these bacteria are counterstained by Carbol fuchsine solution.
Result: Gram-positive bacteria appear blue, gram-negative bacteria red.

The kit contains

Carbol gentianaviolet solution (Art. No. CN00)
Iodine-potassium iodide solution acc. to Lugol (Art. No. N052)
Gram's decolourising solution (Art. No. CN02)
Carbolic fuchsine solution (Art. No. A130).
Contents of this kit may be bought separately.

Storage temperature: +15 to +25 °C
Transport temperature: ambient temp.

Preparation of an Oxalate Gentian Violet Solution

Dissolve 0.8 g ammonium oxalate (Art. No. P737.1) in 80 ml dist. water. Then dissolve 2 g gentian violet (crystal violet, Art. No. T123.1) in 20 ml 96 % ethanol (Art. No. T171.1). Mix both solutions well. Filter solution before using.

Lactophenol Blue Staining

Staining method for identification and visualisation of fungal cells.

ready-to-use

Lactophenol blue solution

for microscopy

Fungal stain for microbiological material.

Lactophenol blue solution is used to visualise fungal cells in various cytological materials.

Application

Air dry and heat fix the sample material on the slide. Then add 1-2 drops of staining solution and place a cover glass on top. After about 2 min the fungal cells appear dark blue. Depending on the type of sample material to be examined, it may be necessary to extend the reaction time of the staining solution.

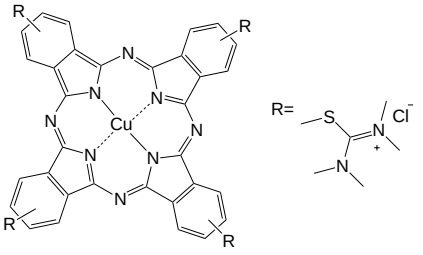
Performing Detection of Cellulose:

Add one drop of the solution to the section applied to a slide. After 30 min in maximum cellulose fibres are stained blue; wood, cork and cutin are stained yellow. The cellulose staining is a dichroitic staining. Depending on the polarisation direction of light different wavelengths of light are absorbed. Thus the dye changes from dark blue to colourless.

Acc. to Dieter Gerlach: *Bot. Mikrotechnik*, 2. Edition, Thieme (1977).



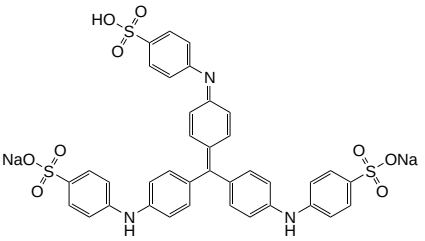
Dyes

Carl ROTH offers a wide range of staining agents in a tried and tested quality for use in botany, bacteriology, histology and cell culture.

Chromogenic Dyes

Alcian blue 8 GS (C.I. 74240)

for microscopy



Bacteriology and histology.

Basic dye, soluble in diluted acetic acid solution (0.1 %–3 %) in concentrations of 0.05 % to 1 %. Used e.g. for staining of glycoproteins as an alternative to PAS-Staining.

Dissolve 0.05–1 % in diluted acetic acid solutions

Ponceau S (C.I. 27195)

for histology and electrophoresis

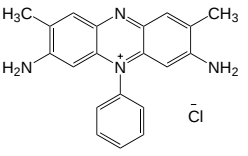
For reversible protein staining on membranes and for microscopy.

Directions for use

Staining of NC membranes: 0.2-2 % Ponceau S in 3 % trichloroacetic acid (Art. No. 8789.1) + 3 % sulphosalicylic acid (Art. No. 4119.1), incubate for 1-5 mins. at room temperature. Enhance contrast by incubation in water acidified by a few drops acetic acid.

Staining of PVDF membranes: 0.1–1 % Ponceau S in 10 % acetic acid (Art. No. 6755.1), incubate 1-5 mins. at room temperature. Ponceau S stained bands on PVDF only appear bright and distinct after drying (not recommended if Western blotting shall be performed).

Prior to Western blot analysis decolourise in PBS (Art. No. 1058.1) or TBS (Art. No. 1060) for 10-20 mins. at room temperature.



Suitable for NC and PVDF membranes as well as prior to Western analyses.

2,3,5-Triphenyltetrazolium chloride

≥98 %, p.a.

For microbiology and histochemistry. For vital staining of cells.

Used in biochemistry to measure the activity of dehydrogenases and in vital staining to detect living cells through the reduction of tetrazolium to formazan via the dehydrogenases of the respiratory chain. Triphenyltetrazolium chloride can be used to measure the bacterial content of liquids in food analysis and/or to determine seed vitality. In microbiology it is used to distinguish between coliform and noncoliform bacteria, whereas in thin layer chromatography it is ideal as a spray reagent on reducing sugar, corticosteroids and other reducing agents.

Mounting Media

Hydrophobic Mounting Media

The classical mounting media for producing durable sections in microscopy.
Carl ROTH offers **synthetic mounting media** like the proved ROTI®Histokitt and **natural balsams** like the classic Canada balsam.

ready-to-use

ROTI®Histokitt

ready-to-use, for histology

Synthetic mounting medium. Compatible with ROTI®Histol (Art. No. 6640).

- Quick drying
- Results in permanent specimens with neutral pH
- Protects against bleaching
- Not suitable for aqueous samples!

UN no. 1866 · ADR 3 III · WGK 2

Danger H225-H315-H336-H361d-H373

Art. No.	Pack Qty.	Pack.	€
6638.1	100 ml	glass	17,10
6638.2	500 ml	glass	45,70

ready-to-use

ROTI®Histokitt II

ready-to-use, for histology

Synthetic mounting medium. Compatible with xylene (e.g. Art. No. 9713).

- Quick drying
- Results in permanent specimens with neutral pH
- Protects against bleaching
- Not suitable for aqueous samples!
- Adapted for embedding machines!
- Typical refractive index: 1.4930-1.4960

UN no. 1307 · ADR 3 III · WGK 2

Warning H226-H312-H315-H319-H335-H373-EUH208

Art. No.	Pack Qty.	Pack.	€
T160.1	100 ml	glass	16,70
T160.2	500 ml	glass	46,15

ready-to-use

ROTI®Mount

ready-to-use, for histology

Synthetic mounting medium. Compatible with ROTICLEAR® (Art. No. A538) and n-Butyl acetate (Art. No. P036).

- **Free from xylene and toluene**
- Quick drying
- Results in permanent specimens with neutral pH
- Protects against bleaching
- Not suitable for aqueous samples!

For long–term storage we recommend a storage temperature of 4 °C in the dark. For use the product should have room temperature to ensure an ideal consistence.

ready-to-use

Euparal

ready-to-use, for microscopy

Mounting agent, alternative to Canada balsam

- Alternative to Canada Balsam
- Embedding already from alcohol 80 %
- Diluent and solvent is Euparal Essence
- **Do not use organic solvents!**
- Refractive index for liquid Euparal: 1.483
- Refractive index for completely solidified Euparal: 1.535

Euparal is an alternative to Canada balsam for mounting microscopic specimens and is used in the same way. Unlike balsam, which is very sensitive to water and can only be used after specimens have been dehydrated with high-percentage alcohol and xylene, mounting in Euparal with 80 % alcohol is possible without any cloudiness occuring. Euparal solidifies slower than Canada balsam. The duration of the solidifying process depends on the mounted object and temperature. Euparal solidifies faster when warm.

As it is a natural resin and there is no polymerisation, permanent Euparal preparations can be dissolved later under gentle heating with Euparal essence (Art. No. A145).
Euparal contains Sandarac resin, camphor and salol. Paraldehyde and eucalyptol serve as a solvent.

Hydrophilic Mounting Media

These mounting media allow embedding without previous dehydration. Thus shrinking of specimens caused by organic solvents can be avoided. Additionally the hydrophilic milieu prevents washing out of cell ingredients like lipids, an important requirement for use in histochemistry.

ready-to-use

ROTI®Mount Aqua

ready-to-use, for microscopy

Aqueous mounting medium

ROTI®Mount Aqua is an aqueous solution of polyacrylate resin used for mounting of paraffin sections and cryostat sections directly after staining. The solution is ready to use. Colours and tissue structures are preserved in an optimal way. For long-term preserving of fluorescent dyes we recommend ROTI®Mount FluorCare (Art. No. HP19).

Directions for use

Residues of staining solution are removed by rinsing with buffer or destilled water. Afterwards the specimens are mounted with ROTI®-Mount Aqua.

Notes on storage

Store at room temperataure, protected from light.

Store protected from light.

ROTI®Mount FluorCare

ready-to-use, for fluorescence microscopy

Aqueous mounting medium with antifading effect for fluorescent dyes.

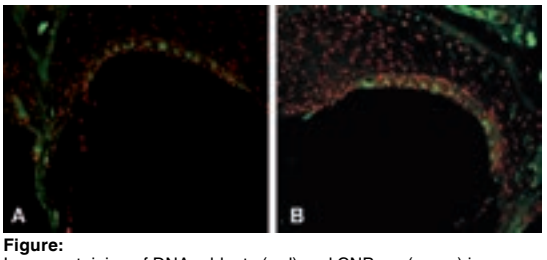

Figure:
Immunostaining of DNA adducts (red) and CNPase (green) in cryosections of the inner ear (*stria vascularis*) from mice
a) mounted in glycerol
b) mounted in ROTI®Mount FluorCare
With kind assistance of laboratory Dr. J. Thomale, DNA-Repair Group, Institute of Cell Biology, West German Cancer Centre Essen.

ROTI®Mount FluorCare has been developed especially for fluorescene microscopy and is compatible with all current fluorescent dyes. It is an aqueous mountant with an additional antifading reagent which reduces photobleaching drastically. Fluorescence will remain for many weeks. In contrast to other mounting media ROTI®Mount FluorCare does not show autofluorescence at any common wavelength.
ROTI®Mount FluorCare is also available with the dyes DAPI (HP20.1) and propidiumiodide (HP21.1) for simultaneous counter staining of nuclei.

Filled in dropper bottles.

Notes on storage

The solution should be stored at +4 °C, protected from light.

Store protected from light.

Mowiol® 4-88

granulated

Aqueous mounting medium in histology.

For durable preparations. Mowiol 4-88 is used as hydrophilic mounting medium, particularly for immune histochemical applications. Usually it is applied in combination with the antibleaching reagent DABCO (1.4-Diazabicyclo-(2.2.2)octane), Art. No. 0718, which conserves the colours and the fluorescence of durable samples.

Kaiser's glycerol gelatine phenol-free

for microscopy

Aqueous mounting medium

It is an aqueous mounting medium which is solid at room temperature. Composition and application are according to the classical Kaiser's glycerol gelatine; however, it does not contain phenol. The added preserving agent is classified as non-hazardous. The pH value of the product is 6–7. Therefore, it is suitable also for stainings which are sensitive against acids (e.g. hematoxylin).

- Non-hazardous ingredients
- Neutral pH (6–7)
- Convenient also for sensitive stainings

Directions for use

Prior to use the glycerol gelatine is melted on a water bath (max. 50–55 °C) and then dropped onto the slide by using a pipette or a glass rod.

WGK 1

Art. No.	Pack Qty.	Pack.	€
6474.1	50 ml	glass	23,15

Glycerol-gelatine (acc. to Kaiser)

Preparation:

Dissolve 10 g gelatine gold in 60 ml water and add 70 ml glycerol.

Add 0.1 g phenol to 100 g mixture, heat 10–25 minutes in the water bath while stirring until purification, then filter hot over glass wool or paper.

Avoid heating much beyond 60 °C, because overheated gelatine loses its ability to solidify.

► For further glycerines and gelatines see chapter Chemicals A-Z

ready-to-use

Phytohistol® plus

ready-to-use, for microscopy

Botanical mounting medium based on sugar

Phytohistol® plus is an aqueous mounting medium based on sugar with the consistency of liquid honey. It is especially suitable for plant materials. After evaporation of the water a rubber-like film remains.

- New compound
- High stability
- No hazardous ingredients
- Neutral pH 6–7

Directions for use

Drop on slide, add specimen. When free from air bubbles place cover slip.

Notes on storage

For producing durable specimens we recommend to seal the edges of the cover slip with our ROTI®Seal cover slip sealant (Art. No. 6473).
Shelf life: The solution contains a preserving agent and is stable for minimum 4 years after manufacture.

ROTI®Seal

for microscopy

Aqueous cover slip sealant.

ROTI®Seal is used to seal the edges of the coverslip. Therefore, it protects the mounted specimen reliably against damages caused by air humidity. ROTI®Seal is solid at room temperature.

- Non–hazardous ingredients
- Solvent–free
- Solidification by light

Directions for use

Prior to use it is melted on a water bath (max. 50–55 °C), then it is applied around the edges of the coverslip by using a pipette or a glass rod. Exposure to light (day-light is sufficient) allows the sealant to harden within a short time.

Melt on a water bath (50–55 °C) prior to use.

P049.1	100 ml	glass	24,65

Please Note:

Protein glycerol (Art. No. P049) contains egg albumin, colloidally dissolved in glycerol. At room temperature it may flocculate. But it will redissolve by gentle warming.

ROTI®Liquid Barrier Markers

With ROTI®Liquid Barrier Marker you can surround samples on a slide with water–repellent circles and thus separate them from each other. In this way several samples can be processed simultaneously. Or different stainings can be performed on one slide. Application areas are immunological, histological and molecular biological investigations.

Directions for use

The solution is applied to slides or other glass surfaces. After drying, a resistant hydrophobic film remains providing a barrier to aqueous liquids.
The barrier film can be wiped off the glass surface with a dry cloth or a cloth impregnated with xylene.

ready-to-use

Adhesion slides ROTI®Bond

Fast and highly efficient immobilisation of cellular material with optimal structure conservation.
The new adhesive coating of the ROTI®Bond adhesion slides reacts to natural surface structures of cells and tissues, anchoring them securely to the glass surface. Due to this procedure, based on different binding principles, the cells do not lose their antigenicity, their cell functionality and their three-dimensional structure.

- Assays using only several hundred cells possible
- No cell loss even during harsh incubation procedures
- Excellent recovery rate
- Compatible with all standard and modern assay systems and all fluorescent dyes
- Particularly adapted to assays using stem cells

Directions for use

Immobilisation of cells or tissue sections occurs immediately after contact to the glass surface. Drying of the samples is therefore not necessary. The cellular material can then be fixed with all common fixatives.
Cell cultivation can be continued in appropriate culture medium after cell adhesion, allowing *in-vivo* live assays, e.g. with a multiphoton or laserscan microscope.
At present, there is no evidence of any preferential cell type binding in heterogenous cellular material.
Dimensions: L 75 mm × W 25 mm, dikte 1 mm.

ROTI®Bond adhesion slides 50 and 100 are delivered in ROTILABO®-slide boxes.

A 121 °C

Click Chemistry

Schematic representation of the copper(I)-catalysed azide-alkyne cycloaddition (CuAAC).

The copper(I)-catalysed azide-alkyne cycloaddition (CuAAC) is the most prominent example of a group of reactions named click reactions. According to Sharpless' definition, these reactions are characterised by high yields, mild reaction conditions, and by their tolerance of a broad range of functional groups.[1–3] Typically, the reactions require simple or no workup or purification of the product. The most important characteristic of the CuAAC reaction is its unique bioorthogonality as neither azide nor terminal alkyne functional groups are generally present in natural systems.

Reagents for Click Chemistry

Starting from diverse copper catalyst sources, over Cu(I) stabilising ligands to buffer additives and solvents, you will find all necessary reagents in the special ROTI®Click quality to perform your click reactions here.

Catalysts, Ligands, Additives and Solvents

Product name	Purity	Art. No.	Pack Qty.	€
L(+)-Ascorbic acid sodium salt	≥99 %, ROTI®Click Grade	**7819.1**	10 mg	20,35
		7819.2	50 mg	52,60
Copper(I) bromide	≥99,999 %, ROTI®Click Grade	**7813.1**	5 mg	18,85
		7813.2	50 mg	106,45
Copper(II) sulphate	≥98 %, anhydrous, ROTI®Click Grade	**7816.1**	10 mg	18,85
		7816.2	50 mg	52,60
DMSO/*t*-Butanol Solvent	ROTI®Click Grade	**7815.1**	1 ml	17,10
		7815.2	10 ml	94,10
Tris[(1-benzyl-1*H*-1,2,3-triazol-4-yl)methyl]amine (TBTA)	≥95 %, ROTI®Click Grade	**7814.1**	5 mg	42,90
		7814.2	10 mg	59,70
		7814.3	50 mg	94,50
		7814.4	100 mg	178,45
Tris(3-hydroxypropyltriazolylmethyl)amine (THPTA)	≥95 %, ROTI®Click Grade	**7822.1**	5 mg	31,75
		7822.2	10 mg	46,80
		7822.3	50 mg	94,10
		7822.4	100 mg	154,30

For additional product data and safety information, see chapter Chemicals A-Z.

Tip:

TBTA (Art.No. 7814) is suitable as copper-stabilising ligand for reactions in organic solvents.
THPTA (Art.No. 7822) on the other hand is an optimal ligand for reactions in aqueous media.

Azides & Alkynes

PEGylation and Linker

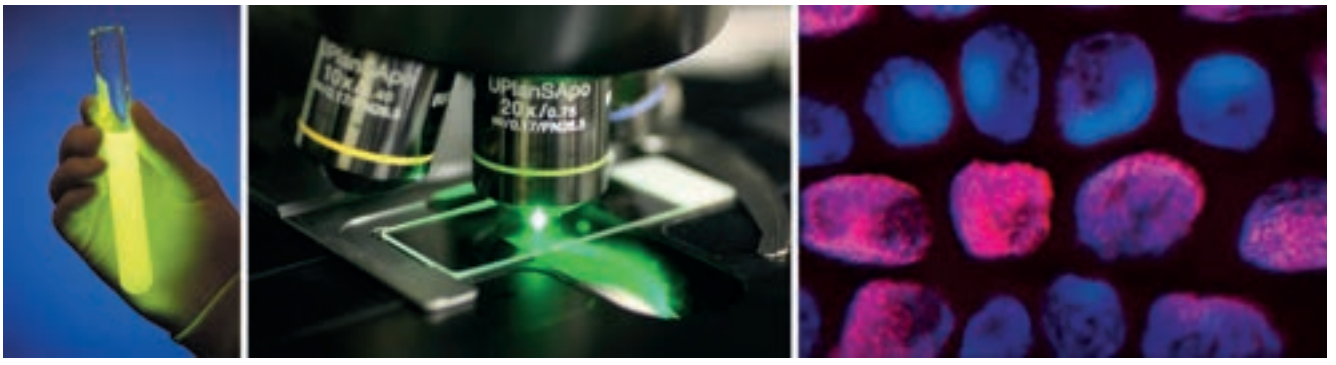
Click chemistry opens the door to introduce polyethylene glycols (PEGs) or other linkers in very sophisticated manner into your sample, which are still active for following reaction by the means of amine, carboxyl, malemide or NHS-functional terminal groups. You can choose between alkyne and azide structured PEGs and linkers which you find in the table below.

PEG and Linker Azides

Product name	Purity	Art. No.	Pack Qty.	€
4-Azidobenzoic acid	≥97 %	**7835.1**	10 mg	54,30
Aminooxy-PEG3-Azide	≥90 %	**7832.1**	5 mg	99,45
		7832.2	10 mg	150,40
H_2N-PEG3-Azide	≥90 %	**7830.1**	5 mg	51,10
		7830.2	10 mg	82,25
NHS-PEG4-Azide	≥90 %	**7823.1**	5 mg	76,25
		7823.2	10 mg	113,85
		7823.3	50 mg	396,70

For additional product data and safety information, see chapter Chemicals A-Z.

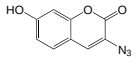
Important information on refrigerated transports

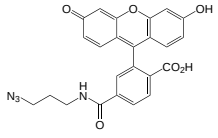


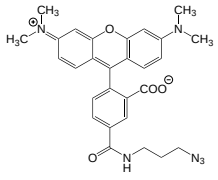
All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**

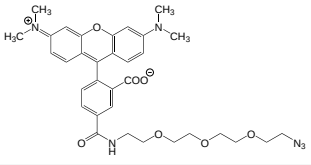
Additional costs resulting from such, **will be invoiced** (further information on request).

Please note: In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.







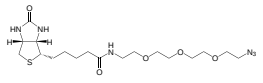


Tags

Fluorescent Tags

Carl ROTH offers a selection of fluorescent tags for labelling of (bio-)molecules via click chemistry. All available tags are suitable for fluorescence spectroscopy applications due to their excellent absorption properties and good solubility. Tags with PEG-spacer are beneficial for applications with as little interaction between the analyte and the tag as possible. The coumarine derivative (Art No. 7811) offers a unique feature: fluorescence is only detected after the coupling via click reaction.

Fluorescent Tags with Azide Function



Structural formula	Product name	Purity	Absorption maximum	Emissions maximum	Mol. extinction coefficient ε	Art. No.	Pack Qty.	€
	3-Azido-7-hydroxycoumarin	≥98 %	404 nm (after click reaction)	480 nm (after click reaction)		**7811.1**	1 mg	71,50
						7811.2	5 mg	173,10
	6-Carboxy-fluorescein Azide (6-FAM-Azide)	≥95 %	496 nm	516 nm	83 000 cm $^{-1}$M^{-1}	**7806.1**	1 mg	54,30
						7806.2	5 mg	94,10
						7806.3	10 mg	144,60
						7806.4	100 mg	532,15
	5-Carboxy-tetramethyl-rhodamine Azide (5-TAMRA-Azide)	≥95 %	546 nm	579 nm	91 000 cm $^{-1}$M^{-1}	**7807.1**	1 mg	50,00
						7807.2	5 mg	104,85
						7807.3	10 mg	155,80
						7807.4	100 mg	532,15

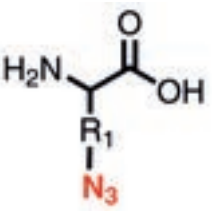
						7808.4	100 mg	568,70

► Further Fluorescent Tags see www.carlroth.com

Non-Fluorescent Tags

Besides fluorescent tags other non-fluorescent labels play an important role in biochemistry and microbiology. Incorporation of such functional groups into your sample with high yields and selectivity is easily possible by click chemistry.

Non-Fluorescent Tags

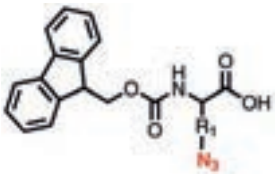


Structural formula	Product name	Purity	Art. No.	Pack Qty.	€
	Biotin-PEG3-Azide	≥90 %	**7804.1**	1 mg	121,40
			7804.2	5 mg	203,20

For additional product data and safety information, see chapter Chemicals A-Z.

Click Chemistry

Azido Amino Acids



With the emergence of click chemistry the use of azide- and alkyne-derivatised *α*-amino acids has found high interest e.g. in the area of peptide synthesis as a powerful tool in the development of new therapeutics and biological chemistry fundamental research. Peptide labelling mostly requires reactions which are running close to physiological conditions (neutral pH, aqueous solution, ambient temperature). Cu(I)-catalysed alkyne-azide cycloaddition (CuAAC) is optimal for such biological compounds, here the advantages of click chemistry once again show their potential. The low reactant concentrations, low background labelling, the quantitative and rapid labelling, plus the mild reaction conditions fit the necessary reactivity, selectivity and biocompatibility criteria for the peptide labelling and thus ensure the preservation of biological function. Carl ROTH provides high quality azido amino acids. In this form they can easily undergo click reaction when an alkyne functional reporter molecule is present.

Azido Amino Acids

Product name	Brand/Purity	Alternative Name	CAS No.	Art. No.	Pack Qty.	€

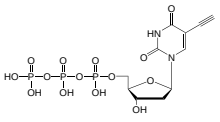
Nucleosides and Nucleotides

Nucleosides

The detection of cell proliferation is of utmost importance for monitoring cell vitality, determining genotoxicity or evaluating anticancer drugs. The feeding of cells with EdU (5-Ethynyl-2'-deoxyuridine) or EU (5-Ethynyl uridine) can be used in cell proliferation studies.



Nucleosides

	Product name	Purity	Art. No.	Pack Qty.	€
	5-Ethynyl-2'-deoxyuridine (EdU)	≥98 %	**7845.1**	5 mg	29,60
			7845.3	50 mg	87,65
			7845.4	100 mg	132,80
			7845.5	500 mg	520,30
	5-Ethynyl uridine (EU)	≥98 %	**7848.1**	5 mg	53,65
			7848.2	10 mg	85,90

Nucleotides

Our modified nucleotides for click chemistry complement our range of unmodified standard nucleotides. You can use our alkyne-triphosphates in your nucleotide mixture to incorporate alkyne groups into your PCR fragment. These alkyne groups can be used to label the PCR fragment in a subsequent click reaction.

Nucleotides

Structural formula	Product name	Purity	Art. No.	Pack Qty.	€
	5-Ethynyl-dUTP	≥98 %, 100 mM in water	**7802.1**	5 µl	117,20
			7802.2	25 µl	385,95
			7802.3	50 µl	365,50

For additional product data and safety information, see chapter Chemicals A-Z.

Click Chemistry

Cell Proliferation Assays

Our ROTI®Kits for EdU mediated detection of cell proliferation provide a superior alternative to time-consuming and less sensitive bromodeoxyuridine (BrdU) assays. Similar to BrdU assays, our assays utilise a uracil derivative (in this case ethynyldeoxyuridine, EdU) which is incorporated into the replicating DNA. EdU is not detected via antibodies; instead fluorescent dyes are coupled directly via click reaction. This fast and elegant approach allows for direct labelling of replicating DNA with the desired fluorescent dye. Thus, the assay is perfectly adaptable to the present facilities and to the assay situation (e.g. for double or triple detection). Furthermore, the click reaction is highly selective and therefore prevents any unspecific labelling. The protocol includes only few steps and decreases the total amount of time.

Advantages of the click chemistry based approach:

Schematic illustration of the click chemistry based EdU cell proliferation assay.
A) Incubation of cells with EdU. EdU is a thymidine analogue and is incorporated in DNA during active DNA synthesis.
B) After DNA synthesis, EdU was incorporated in the DNA strands.
C) Detection of proliferating cells via click chemistry. This reaction is finished within 30 minutes, whereby a variety of different fluorescent dye azides can be used.

Advantages of the Click Assay:

- Highly reliable
- Easy handling
- Fast detection procedure (only 30 min.)
- Mild conditions, no DNA denaturation required
- Compatible with various dyes
- Modular system in click chemistry
- Compatible with multiplexing

Kits available for:

• Fluorescence microscopy
(ROTI®Kits for Imaging)
• Flow Cytometry
(ROTI®Kits for Flow Cytometry)
• High Throughput Screening
(ROTI®Kits for High Throughput Screening)

Code in product name	Markers	Absorption (nm)	Emission (nm)	Filter configuration
-488	6-FAM azide	496	516	FITC
-555	5-TAMRA azide	546	579	Cy3™
-594	5/6 Sulforhodamine	584	603	Texas Red®
-647	Eterneon red (analogous to cyanine 5 azide)	643	662	Cy5T™

Tip:

The number at the end of the product name specifies the excitation wavelength of the included fluorescent marker.
Suitable excitation source are:

- 488 nm (blue-green argon laser 488 nm, blue diode laser 473 nm)
- 555 nm (green Nd:YAG laser 532 nm, green helium-neon-laser 543 nm)
- 594 nm (yellow helium-neon-laser 594 nm, yellow diode laser 594 nm)
- 647 nm (red krypton laser 647 nm, red helium-neon-laser 633 nm, red diode laser 635 or 650 nm)

ROTI®Kits for Imaging

The detection of cell proliferation is of utmost importance for monitoring of cell vitality, determining genotoxicity or evaluating anticancer drugs. Carl ROTH's cell proliferation assays based on EdU (5-ethynyl-2'-deoxyuridine) provide a superior alternative to BrdU (bromodeoxyuridine) assays. Carl ROTH's EdU Click assays are not antibody based and therefore do not require DNA denaturation for detection of the incorporated nucleoside. Instead, the EdU Click assay utilizes click chemistry for detection in a variety of dye fluorescent readouts. Furthermore, the streamlined detection protocol both reduces the total number of steps and significantly decreases the total amount of time.

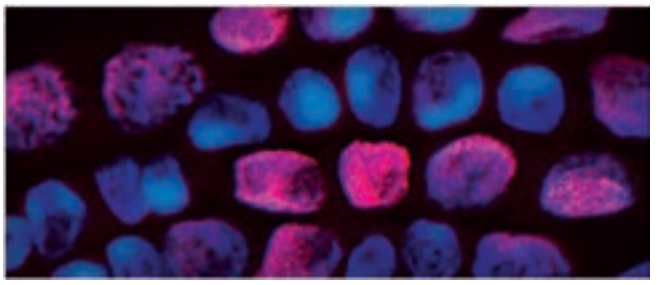

Figure: Proliferating tissue of barley meristem labelled via EdU Click-555 kit (Art. No. 7775.1). Dividing cells incorporated EdU and were labelled via click reaction with TAMRA (pink stained cells). Nuclei were counterstained with DAPI (blue). Magnification: 100x; Filterset: Sp. Aqua HC mFISH; Sp. Green HC mFISH.

ROTI®Kits for Flow Cytometry (FC)

The ROTI®Kits for Flow Cytometry by Carl ROTH use click chemistry to detect cell proliferation by means of a large number of fluorescent stain read-outs. In the detection procedure both, the total number of steps and the processing time are significantly reduced. The simple click chemistry detection procedure is complete within 30 minutes.

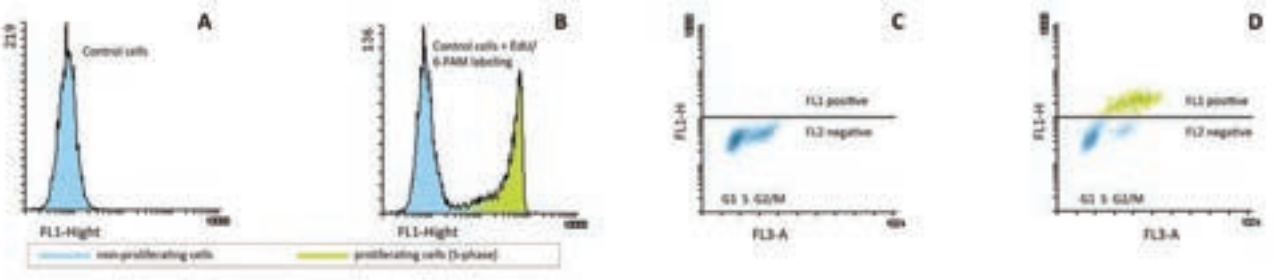

Figure: HeLa cells, treated without (A) and with (B) 10µM EdU for 2 h. Click reaction was performed using 6-FAM-Azide.
A: negative control, cells without EdU incorporation.
B: non-proliferating cells without EdU incorporation (blue coloured left peak) and proliferating cells (S-phase) having incorporated EdU and are labeled with 6-FAM Azide (green coloured right peak).
Density blots of PI (propidium iodide) stained samples without (**C**) and with (**D**) EdU incubation and followed click reaction. The y-axis presents the FL1-Fluorescence intensity and the x-axis the content of DNA measured with FL3-area. Cell cycle phases are indicated as G1, S and G2/M phase.

DNA Synthesis

CPG/Supports

Support material for DNA-Synthesis

Derivated Controlled Pore Glass (CPG) is used as support material for DNA-synthesis. The 500 Å supports are ideal for virtually all applications. In order to avoid steric hindrance between the growing oligo-nucleotide chains and to gain a maximum yield of full-length chains, a long-chained alkylamine “spacer arm” is used.
500 Å supports are loaded with 30–40 µmol/g

CPG/Supports

Product name	Purity	Art. No.	Pack Qty.	€
Adenosine-CPG-Support	500 Å pore size	**2318.3**	1 g	74,75
Cytidine-CPG-Support	500 Å pore size	**2319.3**	1 g	74,75
Guanosine-CPG-Support	500 Å pore size	**2320.3**	1 g	74,75
Thymidine-CPG-Support	500 Å pore size	**2321.3**	1 g	74,75

BCE-Phosphoramidites

for PerSeptive Expedite™ and PolyGen® Synthesizer

Phosphoramidites are used as nucleotide analogues for the chemical synthesis of oligonucleotides. To avoid side reactions at other reactive nucleophilic groups (e.g. hydroxy or amino groups) they are provided with protective groups.

BCE-Phosphoramidites

Product name	Purity	Art. No.	Pack Qty.	€
Adenosine-BCE-phosphoramidite	for DNA synthesis	**K921.1**	1 g	44,65

DMT Removal DCE

for DNA synthesis

Dimethoxytrityl is a protective group for hydroxy groups which is used to protect the 5' OH group of the individual nucleotides in DNA synthesis. The protective group is acid labile and is removed in the ongoing synthesis reaction by the addition of trifluoroacetic acid (deprotection) to enable the coupling of the subsequent nucleotide.

We offer DMT-Removal-Reagent in dichloroethane (K060) as well as in dichloromethane (2257). DMT in DCE is used for synthesizers which draw the solution from the bottles by vacuum pumps and push it through the reaction columns. Since these vacuum pumps apply a significant force, the DCE is more suitable due to its high boiling pressure, as it is absorbed and introduced into the reaction without the formation of gas bubbles. The use of DMT in DCM could interfere with the reaction by creating gas bubbles.

3 % TCA in DCE. Thread sizes: 450 ml – 27 mm. The 2.5 l bottle can be used with all instruments.

Suitable for Expedite™89xx and Polygen®

Oxidation reagent

for DNA synthesis

0,05 M Iodine

The phosphite triester linkage formed during oligonucleotide synthesis is of limited stability and has to stabilised. Treatment of the support-bound material with iodine and water in the presence of a weak base oxidizes the phosphite triester into a tetracoordinated phosphate triester, a protected precursor of the naturally occurring phosphate diester internucleosidic linkage.

0.05 M iodine. Thread sizes: 200 ml – 27 mm, 450 ml – 27 mm. The 2.5 l bottle can be used with all instruments.

Suitable for Expedite™89xx and Polygen®

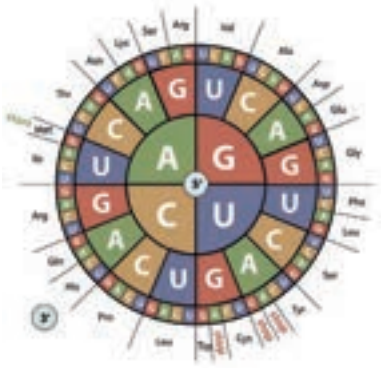
Solvents for DNA Synthesis



- Each reagent is specially purified for DNA synthesis
- Each batch is tested on a synthesizer to determine maximum yield
- Extremely careful manufacturing, testing and packing guarantee a standard of quality for the **DNA Synthesis Grade**

Isotope Labelled Amino Acids (SILAC)

Stable Isotope Labelling with Amino Acids in Cell Culture (SILAC) is a metabolic labelling technique for mass spectrometric (MS)-based quantitative proteomics. For this purpose originally identical cell cultures are cultivated with different nutrient media. One of the cell populations is fed with growth medium containing unlabelled amino acids. In contrast, the second cell culture is fed with a medium containing one or two amino acids labelled with stable (non-radioactive) heavy isotopes. For example, the medium may contain arginine labelled with ^{13}C carbon instead of the normal ^{12}C carbon. The cells growing in this medium incorporate the heavy arginine into all their proteins. Then all peptides containing a single arginine are 6 Dalton heavier than their normal counterparts. The proteins from both cell populations are then mixed together in a ratio of 1:1 and analysed by mass spectroscopy. Pairs of chemically identical peptides of different isotopic compositions can be distinguished in a mass spectrometer on the basis of their mass difference. The ratio of the intensities in the mass spectrum for such peptide pairs reflects the frequency ratio for the two proteins.

PEPTIPURE®-Reagents

Our Brand for Peptide Synthesis

Peptide synthesis reagents must meet very high requirements to ensure that no by-products are produced during peptide synthesis and that very high yields can be achieved. Under the brand name PEPTIPURE® you will find all reagents that are especially suitable for peptide synthesis.

Protected Amino Acids

We supply protected amino acids of the highest quality and purity for standard applications in biochemistry and specifically for peptide synthesis.

Alanine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Alanine	PEPTIPURE® ≥98,5 %, for biochemistry	Boc-L-Ala-OH	**6907.1**	5 g	21,00
			6907.2	25 g	70,45
			6907.3	100 g	222,00
Fmoc-L-Alanine monohydrate	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Ala-OH	**6646.1**	10 g	23,55
			6646.2	50 g	69,35
			6646.3	250 g	278,45
			6646.4	500 g	525,70
			6646.5	1 kg	987,95
Fmoc-L-β-Azidoalanine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Aza-OH	**7369.1**	250 mg	134,40
			7369.2	1 g	439,70
Fmoc-L-γ-Azidohomo-alanine	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Aha-OH	**7363.1**	250 mg	107,00
			7363.2	1 g	375,20

Arg

Arginine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Arginine hydrochloride monohydrate	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Arg-OH	**6914.1**	5 g	35,40
			6914.2	25 g	96,65
			6914.3	100 g	278,45
Fmoc-L-Arginine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Arg-OH	**6896.1**	5 g	38,60
			6896.2	25 g	149,45
Fmoc-L-Arginine-(Pbf)	PEPTIPURE® ≥85 %, for biochemistry	Fmoc-L-Arg(Pbf)-OH	**8833.1**	5 g	49,35
			8833.2	25 g	181,70
			8833.3	100 g	568,70
Z-L-Arginine	PEPTIPURE® ≥98,5 %, for biochemistry	Cbz-L-Arginin	**1914.1**	5 g	20,35
			1914.2	25 g	50,45
			1914.3	100 g	138,70

Asn

Asparagine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Asparagine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Asn-OH	**6915.1**	5 g	17,75
			6915.2	25 g	50,45
			6915.3	100 g	166,65
Fmoc-L-Asparagine	PEPTIPURE® ≥98,5 %, for biochemistry	Fmoc-L-Asn-OH	**6897.1**	5 g	21,40
			6897.2	25 g	64,40
			6897.3	100 g	209,65
Fmoc-L-Asparagine-(Trityl)	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Asn(Trt)-OH	**9652.1**	5 g	24,65
			9652.2	25 g	78,40
			9652.3	100 g	256,95

Asp

Aspartic acid

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Aspartic acid-(O-Benzyl)	PEPTIPURE® ≥98,5 %, for biochemistry	Boc-L-Asp(OBzl)-OH	**8846.1**	5 g	46,15
			8846.2	25 g	149,45
			8846.3	100 g	482,70
Fmoc-L-Aspartic acid-(OAllyl)	PEPTIPURE® ≥98,5 %, for biochemistry	Fmoc-L-Asp(OAll)-OH	**6641.1**	500 mg	24,65
			6641.2	1 g	38,60
			6641.3	5 g	158,60
Fmoc-L-Aspartic acid-(OtBu)	PEPTIPURE® ≥96 %, for biochemistry	Fmoc-L-Asp(OtBu)-OH	**9654.1**	5 g	28,50
			9654.2	25 g	85,90
			9654.3	100 g	278,45
Z-L-Aspartic acid	PEPTIPURE® ≥98,5 %, for biochemistry	Z-L-Asp-OH	**1894.1**	5 g	23,55
			1894.2	25 g	66,55
			1894.3	100 g	177,40

For additional product data and safety information, see chapter Chemicals A-Z.

Cysteine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Cysteine-(4-Mbzl)	PEPTIPURE® ≥98,5 %, for biochemistry	Boc-Cys-(4-Mbzl)-OH	**2042.1**	5 g	29,60
			2042.2	10 g	55,80
			2042.3	25 g	117,20
Fmoc-L-Cysteine-	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Cys(Acm)-OH	**8842.1**	5 g	42,90
			8842.2	25 g	138,70
			8842.3	100 g	439,70
Fmoc-L-Cysteine-(Trityl)	PEPTIPURE® ≥98,5 %, for biochemistry	Fmoc-L-Cys(Trt)-OH	**8841.1**	5 g	23,55
			8841.2	25 g	71,95
			8841.3	100 g	220,40

Dioxaoctanioc acid

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Fmoc-8-Amino-3,6-dioxaoctanoic acid	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-O_2Oc-OH	**7400.1**	500 mg	89,15
			7400.2	1 g	145,15

Glutamine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Glutamine	PEPTIPURE® ≥97 %, for biochemistry	Boc-L-Gln-OH	**6916.1**	5 g	21,00
			6916.2	25 g	70,45
			6916.3	100 g	222,00
Fmoc-L-Glutamine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Gln-OH	**6898.1**	5 g	23,15
			6898.2	25 g	71,95
			6898.3	100 g	241,90
Fmoc-L-Glutamine-(Trityl)	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Gln(Trt)-OH	**9653.1**	5 g	31,10
			9653.2	25 g	103,10
			9653.3	100 g	342,95

For additional product data and safety information, see chapter Chemicals A-Z.

Glutamic acid

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Glutamic acid	PEPTIPURE® ≥99 %, for biochemistry	Boc-L-Glu-OH	**6917.1**	5 g	24,20
			6917.2	25 g	77,30
			6917.3	100 g	256,95
Fmoc-L-Glutamic acid-(OtBu) monohydrate	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Glu(OtBu)-OH	**9655.1**	5 g	26,35
			9655.2	25 g	85,90
			9655.3	100 g	278,45
Z-L-Glutamic acid	PEPTIPURE® ≥98,5 %, for biochemistry	Z-L-Glu-OH	**1885.1**	5 g	22,50
			1885.2	25 g	55,80
			1885.3	100 g	170,95

Glycine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-Glycine	PEPTIPURE® ≥98 %, for biochemistry	Boc-Gly-OH	**6918.1**	5 g	14,95
			6918.2	25 g	40,75
			6918.3	100 g	128,50
Cbz-Cyclohexyl-L-glycine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-Gly-OH	**6636.1**	500 mg	25,30
			6636.2	1 g	40,75
			6636.3	5 g	160,20
Fmoc-Glycine	PEPTIPURE® ≥99 %, for biochemistry	Cbz-L-Chg-OH	**6899.1**	5 g	15,60
			6899.2	25 g	42,50
			6899.3	100 g	149,45

Histidine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Histidine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-His-OH	**6920.1**	5 g	42,90
			6920.2	25 g	188,15
Boc-L-Histidine-(Dnp)	PEPTIPURE® ≥97,5 %, for biochemistry	Boc-L-His-(Dnp)-OH	**1994.1**	1 g	27,85
			1994.2	5 g	59,05
			1994.3	10 g	106,45
Fmoc-L-Histidine-(Trityl)	PEPTIPURE® ≥97 %, for biochemistry	Fmoc-L-His(Trt)-OH	**8843.1**	5 g	26,35
			8843.2	25 g	85,90
			8843.3	100 g	278,45

Hydroxyproline

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Hydroxy-proline	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Hyp-OH	**6921.1**	5 g	55,80
			6921.2	25 g	192,45

Isoleucine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Isoleucine hemihydrate	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Ile-OH	**6923.1**	5 g	17,75
			6923.2	25 g	50,45
			6923.3	100 g	166,65
Fmoc-L-Isoleucine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Ile-OH	**6647.1**	10 g	23,15
			6647.2	50 g	60,10
			6647.3	250 g	235,45

Leucine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Leucine monohydrate	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Leu-OH	**6924.1**	5 g	17,75
			6924.2	25 g	50,45
			6924.3	100 g	166,65
Boc-L-*tert*-Leucine	PEPTIPURE® ≥98,5 %, for biochemistry	Boc-L-Tle-OH	**6942.1**	1 g	31,10
			6942.2	5 g	117,20
			6942.3	10 g	214,50
Fmoc-L-Leucine	PEPTIPURE® ≥95 %, for biochemistry	Fmoc-L-Leu-OH	**6654.1**	10 g	23,15
			6654.2	50 g	60,10
			6654.3	250 g	235,45
			6654.4	500 g	450,45
Z-L-Leucine	PEPTIPURE® ≥94 %, for biochemistry	Z-L-Leu-OH	**1859.1**	5 g	20,35
			1859.2	25 g	51,10
			1859.3	100 g	160,20

Lysine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Lysine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Lys-OH	**6926.1**	1 g	22,50
			6926.2	5 g	73,00
			6926.3	10 g	126,35
Fmoc-L-Azidolysine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Lys(N_3)-OH	**7357.1**	250 mg	117,20
			7357.2	1 g	385,95
Fmoc-L-Lysine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Lys-OH	**6900.1**	1 g	21,00
			6900.2	5 g	66,15
			6900.3	10 g	117,20
Fmoc-L-Lysine-(Boc)	PEPTIPURE® ≥98,5 %, for biochemistry	Fmoc-L-Lys-(Boc)-OH	**8840.1**	5 g	23,55
			8840.2	25 g	73,65
			8840.3	100 g	220,40
Z-L-Lysine	PEPTIPURE® ≥98 %, for biochemistry	Z-L-Lys-OH	**1907.1**	1 g	27,85
			1907.2	5 g	83,75
			1907.3	10 g	149,45

Methionine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Methionine	PEPTIPURE® ≥99 %, for biochemistry	Boc-L-Met-OH	**6928.1**	5 g	25,30
			6928.2	25 g	81,60
			6928.3	100 g	263,40
Fmoc-L-Methionine	PEPTIPURE® ≥95 %, for biochemistry	Fmoc-L-Met-OH	**6656.1**	10 g	23,55
			6656.2	50 g	66,55
			6656.3	250 g	267,70

Ornithine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Fmoc-L-Azidoornithine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Orn(N_3)-OH	**7362.1**	250 mg	134,40
			7362.2	1 g	439,70
Fmoc-L-Ornithine-(Boc)	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Orn-(Boc)-OH	**1932.1**	1 g	21,40
			1932.2	5 g	67,20
			1932.3	10 g	117,20

Phenylalanine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Phenyl-alanine	PEPTIPURE® ≥99 %, for biochemistry	Boc-L-Phe-OH	**6931.1**	5 g	23,55
			6931.2	25 g	70,45
			6931.3	100 g	222,00
Fmoc-L-4-Azidophenyl-alanine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Phe(4-N_3)-OH	**7485.1**	100 mg	67,20
			7485.2	250 mg	141,40
Fmoc-L-Phenylalanine	PEPTIPURE® ≥98,5%, for biochemistry	Fmoc-L-Phe-OH	**6658.1**	10 g	23,15
			6658.2	50 g	62,25
			6658.3	250 g	246,20
Z-L-Phenyl-alanine	PEPTIPURE® ≥98 %, for biochemistry	Z-L-Phe-OH	**1865.1**	5 g	27,85
			1865.2	25 g	75,15
			1865.3	100 g	209,65

For additional product data and safety information, see chapter Chemicals A-Z.

Proline

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Proline	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Pro-OH	**6932.1**	5 g	14,95
			6932.2	25 g	40,75
			6932.3	100 g	128,50
Fmoc-L-4-Azidoproline (2S,4R)	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Pro-(4-N_3)-OH	**7367.1**	100 mg	112,90
			7367.2	250 mg	220,40
			7367.3	1 g	725,65
Fmoc-L-Proline	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Pro-OH	**6659.1**	10 g	21,40
			6659.2	50 g	53,65
			6659.3	250 g	203,20

Propargylglycine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Fmoc-L-Pro-pargylglycine	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Pra-OH	**7491.1**	100 mg	62,25
			7491.2	250 mg	117,20

Serine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Serine	PEPTIPURE® ≥99 %, for biochemistry	Boc-L-Ser-OH	**6933.1**	5 g	25,70
			6933.2	25 g	85,90
			6933.3	100 g	289,20
Fmoc-L-Serine monohydrate	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Ser-OH	**6901.1**	5 g	62,25
			6901.2	25 g	198,90
Fmoc-L-Serine-(tBu)	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Ser(t-Bu)-OH	**9666.1**	5 g	28,95
			9666.2	25 g	88,70
			9666.3	100 g	289,20

Threonine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Threonine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Thr-OH	**6935.1**	5 g	32,15
			6935.2	25 g	123,65
Fmoc-L-Threonine-(tBu)	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Thr(tBu)-OH	**9659.1**	5 g	28,95
			9659.2	25 g	88,70
			9659.3	100 g	289,20

Tryptophan

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Tryptophan	PEPTIPURE® ≥95 %, for biochemistry	Boc-L-Trp-OH	**6945.1**	5 g	17,75
			6945.2	25 g	50,45
			6945.3	100 g	166,65
Fmoc-L-Tryptophan	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Trp-OH	**6903.1**	5 g	21,40
			6903.2	25 g	64,40
			6903.3	100 g	213,95
Fmoc-L-Tryptophan-(Boc)	PEPTIPURE® ≥97 %, for biochemistry	Fmoc-L-Trp(Boc)-OH	**9668.1**	5 g	42,50
			9668.2	25 g	145,15
			9668.3	100 g	489,15

Tyrosine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Tyrosine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Tyr-OH	**6949.1**	5 g	37,10
			6949.2	25 g	145,15
Fmoc-L-Tyrosine	PEPTIPURE® ≥98 %, for biochemistry	Fmoc-L-Tyr-OH	**6906.1**	1 g	41,95
			6906.2	5 g	96,65
			6906.3	10 g	170,95
Fmoc-L-Tyrosine-(tBu)	PEPTIPURE® ≥99 %, for biochemistry	Fmoc-L-Tyr(tBu)-OH	**9669.1**	5 g	28,95
			9669.2	25 g	88,70
			9669.3	100 g	289,20

Valine

Product name	Brand/Purity	Alternative Name	Art. No.	Pack Qty.	€
Boc-L-Valine	PEPTIPURE® ≥98 %, for biochemistry	Boc-L-Val-OH	**6950.1**	5 g	17,75
			6950.2	25 g	50,45
			6950.3	100 g	166,65
Fmoc-L-Valine	PEPTIPURE® ≥95 %, for biochemistry	Fmoc-L-Val-OH	**6660.1**	10 g	23,15
			6660.2	50 g	62,25
			6660.3	250 g	246,20
			6660.4	500 g	450,45

For additional product data and safety information, see chapter Chemicals A-Z.

Coupling Reagents

Our range of traditional and innovative coupling reagents is suited for standard coupling reactions. We offer premium quality products and excellent value for money.

PEPTIPURE® Coupling Reagents

Product name	Brand/Purity	Synonymous	Art. No.	Pack Qty.	€
Benzotriazole-1-yl-oxy-tris-(dimethylamino)-phosphonium hexafluorophosphate (BOP)	PEPTIPURE® ≥99 %	BOP	**2168.1**	5 g	23,55
			2168.2	25 g	62,25
			2168.3	100 g	181,70
1,1'-Carbonyldiimidazole (CDI)	PEPTIPURE® ≥98 %	CDI	**6992.1**	10 g	35,40
			6992.2	25 g	67,65
			6992.3	100 g	160,20
			6992.4	500 g	600,95
1-[(1-(Cyano-2-ethoxy-2-oxoethylidene-aminooxy) dimethylaminomorpholino)] uronium hexafluorophosphate (COMU®)	PEPTIPURE® ≥99 %	COMU®	**2100.1**	5 g	46,15
			2100.2	25 g	166,65
			2100.3	100 g	525,70
N,*N*'-Dicyclohexylcarbodiimide (DCC)	PEPTIPURE® ≥98 %	DCC	**4193.1**	100 g	24,20
			4193.2	250 g	48,95
			4193.3	500 g	85,90
			4193.4	1 kg	160,20
			4193.5	2.5 kg	342,95
N,*N*'-Diisopropylcarbodiimide (DIC)	PEPTIPURE® ≥99 %	DIC	**6981.1**	5 ml	23,55
			6981.2	25 ml	64,40
			6981.3	100 ml	181,70
			6981.4	500 ml	618,15
4-(Dimethylamino)pyridine (DMAP)		DMAP	**6988.1**	5 g	17,75
			6988.2	25 g	34,95
			6988.3	100 g	106,45
			6988.4	500 g	375,20
N,*N*'-Disuccinimidyl carbonate (DSC)		DSC	**2110.1**	5 g	35,40
			2110.2	25 g	93,45
			2110.3	100 g	342,95
1-Ethyl-3-(3-dimethylaminopropyl)carbodi-imide hydrochloride (EDC-HCl)		EDC-HCl	**2156.1**	5 g	28,95
			2156.2	25 g	82,70
			2156.3	100 g	246,20
			2156.5	1 kg	2.069,40
O-(7-Azabenzotriazol-1-yl)-*N*,*N*,*N*',*N*'-tetramethyluronium hexafluorophosphate (HATU)		HATU	**2131.1**	5 g	67,65
			2131.2	25 g	252,65
O-(Benzotriazol-1-yl)-*N*,*N*,*N*',*N*'-tetramethyluronium hexafluorophosphate (HBTU)		HBTU	**2132.1**	5 g	26,80
			2132.2	25 g	63,35
			2132.3	100 g	192,45
			2132.5	1 kg	1.558,75
O-(1*H*-6-Chlorobenzotriazole-1-yl)-*N*,*N*,*N*',*N*'-tetramethyluronium hexafluorophosphate (HCTU)		HCTU	**2112.1**	5 g	28,95
			2112.2	25 g	92,35

For additional product data and safety information, see chapter Chemicals A-Z.

Tip:

- There is no single coupling reagent that is suitable for every coupling reaction. Therefore, Carl ROTH offers a broad range of established and reactive coupling reagents.
- Besides the „gold standard“ HATU (Art. No. 2131), we also offer the greener alternative COMU® (Art. No. 2100), which is known to mediate the coupling in most cases at least as efficient as HATU.
- Oxyma Pure (Art. No. 2118) and K-Oxyma (Art. No. 6891) were developed as less hazardous alternatives for HOBt and HOAt, thus being a perfect one-to-one replacement in most syntheses.

7296.2	100 ml	glass	63,45
7296.3	500 ml	glass	278,45

Tip:

A well-known method for protein sequencing is the Edman degradation. Herein, the peptide is degraded using **phenyl-isothiocyanate (Art. No. 7296)** starting from the N-terminus. Phenylisothiocyanate reacts with the N-terminal amino acid resulting in cleavage from the peptide and formation of a phenylthiohydantoin derivative. Subsequently, the phenyl-thiohydantoin derivative is identified by chromatographic methods through comparison with standards and the next amino acid can be addressed. Through repetition of this procedure stepwise degradation of the peptide is achieved, thus enabling sequencing of peptides with up to 50 residues.

Reactors for Peptide Synthesis

With plunger and frit.
Pore size 25 µm, temperature resistant until +90 °C.
Column outlet: luer (male).

Delivery incl. plunger and frit.

Phosphine Ligands

Transition metal-catalysed cross-couping reactions are an efficient method for building new C-C, C-N and C-O bonds in the organic synthesis. Ligands, particularly phosphine ligands, play a key role in the stabilisation and activation of metal ions in the transition metal complexes. By selection of the correct phosphine ligands important factors can be influenced: for example the reactivity and lifetime of the catalyst, the electron density at the metal atom and sterical properties of the catalyst.

Aliphatic Carboxylic Acids

Structural formula	Product name	Purity	Molecular formula	Art. No.	Pack Qty.	€
	5-Aminolevulinic acid hydro-chloride	≥98 %, for biochemistry	$C_5H_9NO_3 \cdot HCl$	**8451.1**	500 mg	31,10
				8451.2	1 g	46,15
				8451.3	5 g	149,45
	5-Bromovaleric acid	≥96 %	$C_5H_9BrO_2$	**5466.1**	10 g	23,55
				5466.2	50 g	91,95
	Butyric acid	≥99 %, for synthesis	$C_4H_8O_2$	**3277.1**	100 ml	20,35
				3277.2	1 l	81,60
	Capric acid	≥98 %, for synthesis	$C_{10}H_{20}O_2$	**8797.1**	100 g	25,30
				8797.3	500 g	63,35
				8797.2	1 kg	107,00
	Caproic acid	≥98 %, for synthesis	$C_6H_{12}O_2$	**8799.1**	100 ml	21,40
				8799.3	500 ml	38,60
				8799.2	1 l	67,20
				8799.4	2.5 l	134,40
	Crotonic acid	≥99 %, for biochemistry	$C_4H_6O_2$	**1HHN.1**	100 g	16,70
				1HHN.2	500 g	46,15
				1HHN.3	1 kg	80,55
				1HHN.4	2.5 kg	181,70
	Cyclobutane-1,1-dicarboxylic acid	≥98 %	$C_6H_8O_4$	**5451.1**	5 g	46,80
				5451.2	25 g	162,90
	DL-6,8-Dithiooctanoic acid	≥98 %	$C_8H_{14}O_2S_2$	**6229.1**	5 g	145,15
	2-Ethylhexanoic acid	≥99 %, for synthesis	$C_8H_{16}O_2$	**1CNA.1**	250 ml	20,35
				1CNA.2	1 l	45,70
				1CNA.3	2.5 l	91,30
	Fumaric acid	≥99,5 %, for biochemistry	$C_4H_4O_4$	**3748.1**	500 g	19,25
				3748.2	2.5 kg	64,40
				3748.3	10 kg	181,70
	Glycolic acid	70 %, for synthesis	$C_2H_4O_3$	**1LEY.1**	250 ml	14,95
				1LEY.2	1 l	31,75
				1LEY.3	2.5 l	62,25
	Isobutyric acid	≥99 %, for synthesis	$C_4H_8O_2$	**1HA9.1**	250 ml	17,75
				1HA9.2	1 l	41,85
				1HA9.3	2.5 l	78,40
				1HA9.4	10 l	203,20
				1HA9.5	25 l	392,40
	L-Lactic acid	≥98 %, for biochemistry	$C_3H_6O_3$	**8360.1**	5 g	45,70
				8360.2	10 g	71,95
				8360.3	25 g	138,70
	Levulinic acid	≥98 %, for synthesis	$C_5H_8O_3$	**3976.1**	50 g	16,05
				3976.2	500 g	64,40
				3976.3	1 kg	85,90
				3976.4	2.5 kg	160,20
	Maleic acid	≥99 %, for synthesis	$C_4H_4O_4$	**3538.2**	100 g	21,40
				3538.1	500 g	41,85
				3538.3	1 kg	67,65
				3538.4	2.5 kg	138,70
				3538.5	5 kg	246,20
	Malonic acid	≥99 %, for synthesis	$C_3H_4O_4$	**9851.1**	100 g	19,25
				9851.2	500 g	72,60
				9851.3	1 kg	127,95
	Myristic acid	≥98 %, for biochemistry	$C_{14}H_{28}O_2$	**6469.2**	100 g	15,60
				6469.3	500 g	39,70
				6469.1	1 kg	64,40
	Octanoic acid	≥99,5 %, for synthesis	$C_8H_{16}O_2$	**2613.1**	100 ml	18,20
				2613.2	500 ml	28,95
				2613.3	1 l	41,85
				2613.4	2.5 l	83,75
	Pelargonic acid	≥97 %	$C_9H_{18}O_2$	**7015.1**	50 ml	44,65
	Pimelic acid	≥99 %	$C_7H_{12}O_4$	**5270.1**	25 g	42,50
				5270.2	50 g	76,25
	Propionic acid	≥99,5 %, for synthesis	$C_3H_6O_2$	**6026.2**	500 ml	21,00
				6026.1	1 l	30,65
				6026.3	2.5 l	62,25

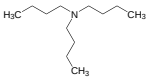
Structural formula	Product name	Purity	Molecular formula	Art. No.	Pack Qty.	€
	Sorbic acid	≥99 %, Ph. Eur.	$C_6H_8O_2$	**7158.1**	250 g	55,80
				7158.2	500 g	105,25
				7158.3	1 kg	198,90
	*n*-Valeric acid	≥98 %	$C_5H_{10}O_2$	**4874.1**	250 ml	40,35

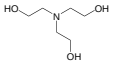
For additional product data and safety information, see chapter Chemicals A-Z.

Aliphatic Aldehydes

Structural formula	Product name	Purity	Molecular formula	Art. No.	Pack Qty.	€
	2-Butenal	≥98 %, for synthesis	C_4H_6O	**3425.1**	250 ml	60,75
	Capric aldehyde	≥97 %, for synthesis	$C_{10}H_{20}O$	**7547.1**	100 ml	145,15
	Caproic aldehyde	≥97 %, for synthesis	$C_6H_{12}O$	**3327.1**	100 ml	48,30
	Dodecyl aldehyde	≥98 %, for synthesis	$C_{12}H_{24}O$	**3754.1**	50 ml	64,00
	*trans*-Hexen-2-al	≥98,5 %, for synthesis	$C_6H_{10}O$	**3757.1**	25 ml	84,40

Aliphatic Alcohols





Structural formula	Product name	Purity	Molecular formula	Art. No.	Pack Qty.	€
	1,3-Butanediol	≥99 %, for synthesis	$C_4H_{10}O_2$	**7473.1**	250 ml	20,35
				7473.2	500 ml	n. a.
				7473.3	1 l	42,90

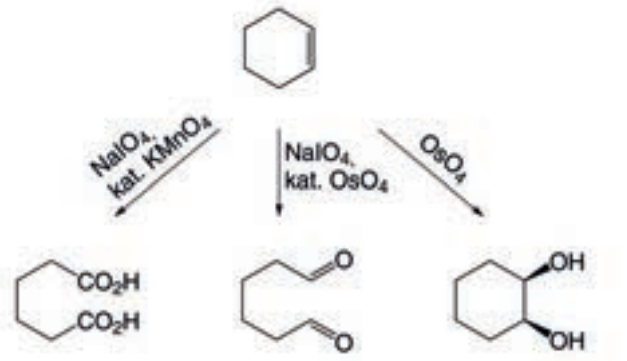
Protecting Groups

Today, protecting groups have become an important tool in the multistep, organic synthesis of complex compounds. The task of a protecting group is to protect a functional group from undesirable reactions with other functional groups. Then the protecting group should be cleaved under as mild conditions as possible. Good protecting groups should be specific, highly selective and both introduceable and cleavable in high yields, and stable under as many reaction conditions as possible.



Protecting Groups

Structural formula	Product name	Brand/Purity	Protecting group (short name)	Removal	Art. No.	Pack Qty.	€
	Benzoyl chloride	≥99 %, for synthesis	Benzoyl (Bz)	alkaline	**7456.1**	100 ml	18,20
					7456.2	500 ml	37,55
					7456.3	1 l	56,45
					7456.4	2.5 l	110,20
	4,4'-Dimethoxytrityl chloride (DMT-Cl)	≥98 %, for synthesis	Dimethoxytrityl (DMT)	with TFA	**9671.1**	5 g	34,30
					9671.2	25 g	93,45
					9671.3	50 g	170,95
					9671.4	100 g	278,45

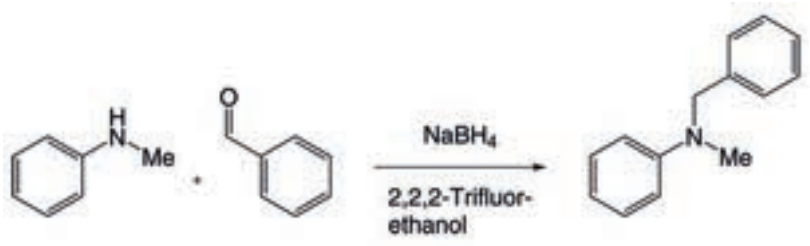
	Trimethylchlorosilane (TMCS)	PEPTIPURE® ≥99 %, for the GC	Trimethylsilyl (TMS)	acidic, alkaline, fluoride ions	**2338.1**	25 g	61,85
	2-(Trimethylsilyl) ethoxymethyl chloride	≥95 %, for synthesis	β-(Trimethylsilyl) ethoxymethyl (SEM)	acidic, alkaline, fluoride ions	**1444.1**	1 ml	49,35
					1444.2	5 ml	128,50

For additional product data and safety information, see chapter Chemicals A-Z.

Oxidising Agents

Oxidation reactions play an important role – not only in inorganic chemistry but also in many organic synthesis processes. Several examples are shown here: Lemieux-von-Rudloff oxidation, Lemieux-Johnson oxidation and dihydroxylation. Carl ROTH offers a selection of well-known and commonly available oxidants in this area.



Oxidising Agents

			9524.3	1 kg	55,80
			9524.1	2.5 kg	101,60

For additional product data and safety information, see chapter Chemicals A-Z.

(Lewis) Acids

Acids are commonly used in synthesis protocols for processing reactions. In addition, acids (usually Lewis acids) can also serve as catalysts for various reactions. The removal of the Boc protecting group shown here is formally catalysed by the acids used (in this case, trifluoroacetic acid). In addition to conventional inorganic acids, Carl ROTH can supply other acids and Lewis acids commonly used in organic synthesis.

Synthesis reagents

Bases

Many reaction mechanisms require deprotonation so that the desired reaction can take place. The strength of the required bases depends entirely on the application. Carl ROTH supplies a wide selection of bases which play an important role in organic synthesis.

Bases

Quaternary Ammonium Compounds

Quaternary ammonium compounds are organic ammonium compounds, for which all four valences of a nitrogen atom are bonded organically. These ammonium compounds are often used as phase-transfer catalysts and ion pair reagents.

ROTIDRY® Dried Solvents

Due to their very low water content, ROTIDRY® solvents are ideal for use in organic synthesis, DNA synthesis and analysis.
ROTIDRY® solvents can be used wherever a low water content is important, e.g. chromatographic purification methods.

Properties:

- Very low water content
- Extremely high product purity
- Low evaporation residue
- Filled under inert gas

ROTIDRY® Dried solvents

Product name	Purity	Art. No.	Pack Qty.	€

ROTIDRY® Sept Dried Solvents in Septum Bottle

Advantages of the septum bottle:
- Additional product quality assurance
- No ingress of water during removal
- Ideal for small quantities
- Removable septum for removal of large quantities
- Special cap permits multiple puncture points

ROTIDRY® Sept Dried Solvents in Septum Bottle

Ionic Liquids

Ionic liquids are salts which are available in a liquid state over a wide temperature range. They constitute a new generation of solvents with considerable potential for being able to replace classic organic solvents. Ionic liquids are composed of organic cations and organic or inorganic anions. Due to their fully ionized composition they exhibit no vapor pressure over the entire liquid range.

- Low-melting with melting point under 100 °C
- Thermally, mechanically and electrochemically stable
- Neither volatile nor combustible
- Negligible vapor pressure
- High solubility of many different kinds of chemicals

Green Chemistry

More sustainable and environmentally friendly products are becoming increasingly important in the chemical industry. Carl ROTH offers a variety of products which are classified as less hazardous or are made from renewable raw materials. The solvents that are relevant to these principles are grouped together in the SOLVAGREEN® brand at Carl ROTH.
The 12 principles of Green Chemistry were summarised in by Paul Anastas – as consultant at the EPA (*Environmental Protection Agency*) – and John C. Warner as follows:
1. Avoid waste
2. Atom-efficient syntheses and reactions
3. Safer chemical synthesis
4. Development and use of safer substances and minimisation of their toxicity
5. Safer solvents and additives
6. Perform processes as energy efficient as possible at room temperature and atmospheric pressure
7. Give preference to renewable resources
8. Shorter synthesis routes
9. Catalysts instead of stoichiometric reagents
10. Naturally degradable products
11. Real-time monitoring of waste prevention
12. Basic risk avoidance in chemical processes

SOLVAGREEN® – Our Brand for Alternative Solvents

Green Solvents

The sustainable solvents listed below – Green Solvents – serve as substitutes for environmentally hazardous and harmful reagents and help minimize risk. Sustainability is also achieved through the use of renewable resources or environmentally compatible manufacturing and recycling processes.

Products from renewable raw materials

Product name	Brand/Purity	Basic material	Pack.	Art. No.	Pack Qty.	€
Bioethanol	SOLVAGREEN® 96 %, Ph. Eur.	Wheat	glass	**6724.1**	1 l	101,60
				6724.2	2.5 l	209,65
			plastic	**6724.3**	2.5 l	205,90
				6724.4	5 l	370,90
				6724.5	10 l	693,40
				6724.6	25 l	1.392,15
	SOLVAGREEN® 96 %, denatured	Wheat	plastic	**6726.1**	1 l	19,25
				6726.2	2.5 l	33,25
				6726.3	5 l	60,75
				6726.4	10 l	94,10
				6726.5	25 l	208,05
Glycerol	SOLVAGREEN® ≥98 %, anhydrous, Ph. Eur.	Vegetables	plastic	**7530.1**	1 l	53,25
				7530.4	2.5 l	91,30
				7530.5	5 l	166,65
				7530.2	10 l	299,95
	SOLVAGREEN® ~86 %, Ph. Eur., extra pure	Vegetables	plastic	**7533.1**	1 l	51,50
				7533.3	2.5 l	88,05
				7533.4	5 l	160,20
				7533.2	10 l	289,20
				7533.5	25 l	557,95

For additional product data and safety information, see chapter Chemicals A-Z.

Bioethanol

Our bioethanol is manufactured by fermentation of organic wheat followed by distillation and rectification.

Advantages:

- Made from wheat grown in a controlled organic environment in accordance with EU organic farming regulation 834/2007
- Non-synthetically manufactured ethanol
- Low toxicity thanks to safe production methods
- Suitable for synthesis and other laboratory applications

Denaturated using a non-organic denaturant **(Art. No. 6726)**

SOLVAGREEN® – Alternative Solvents

Alternative products for environmentally hazardous and harmful reagents

Product name	Brand/Purity	General application	Pack.	Art. No.	Pack Qty.	€
Acetic acid *iso*-propyl ester	SOLVAGREEN® ≥99 %, for synthesis	Alternative for dichloromethane	glass	**1A9C.1**	1 l	31,10
				1A9C.2	2.5 l	61,85
Acetic acid *n*-propyl ester	SOLVAGREEN® ≥99,5 %, for synthesis	Alternative for MEK (mixture 40:60 with acetone)	plastic	**1A9A.1**	1 l	31,10
				1A9A.2	2.5 l	61,85
tert-Amyl methyl ether	SOLVAGREEN® ≥99 %, for synthesis	Alternative for diethyl ether	glass	**1A92.1**	100 ml	19,25
				1A92.2	250 ml	30,00
			plastic	**1A92.3**	1 l	69,35
				1A92.4	2.5 l	117,20
				1A92.5	10 l	317,15
Anisole	SOLVAGREEN® ≥99 %, for synthesis	Alternative for chlorobenzene, toluene	glass	**4417.1**	100 ml	17,10
				4417.2	500 ml	33,25
				4417.3	1 l	55,40
				4417.4	2.5 l	110,20
N-Butyl-2-pyrrolidone (NBP)	SOLVAGREEN® ≥99,5 %, for synthesis	Dipolar aprotic solvent. Alternative for NMP, NEP, DMSO	plastic	**1E8A.1**	100 ml	24,20
				1E8A.2	500 ml	48,95
				1E8A.3	1 l	73,65
				1E8A.4	2.5 l	149,45
Cyclopentyl methyl ether	SOLVAGREEN® ≥99 %, extra pure	Alternative for diethyl ether, tBME/MTBE, THF.	glass	**7763.1**	250 ml	45,05
				7763.2	500 ml	78,40
				7763.3	1 l	120,95
				7763.4	2.5 l	241,90
Diacetone alcohol	SOLVAGREEN® ≥98 %, for synthesis	Alternative for acetone, chlorinated solvents.	glass	**3546.1**	250 ml	19,25
				3546.2	1 l	46,15
				3546.3	2.5 l	92,35
Dibasic ester	SOLVAGREEN® ≥99 %, pure	Alternative for acetone, benzene, toluene, dichloromethane.	plastic	**7973.1**	1 l	32,15
				7973.2	2.5 l	62,25
				7973.3	5 l	104,85
Diethyl carbonate	SOLVAGREEN® ≥99,9 %	Alternative for DMF, phosgene.	glass	**2627.1**	100 ml	19,25
				2627.2	500 ml	32,15
				2627.3	1 l	46,15
				2627.4	2.5 l	88,05
Dihydrolevoglucosenone	SOLVAGREEN® ≥98,5 %, for synthesis	Dipolar aprotic solvent. Alternative for NMP, NEP, DMF, DMAC, DMSO	plastic	**1E89.1**	100 ml	49,35
				1E89.2	500 ml	134,40
				1E89.3	1 l	252,65
Dimethyl carbonate	SOLVAGREEN® ≥99,8 %	Alternative for DMF, phosgene.	glass	**2625.1**	100 ml	16,05
				2625.2	500 ml	25,70
				2625.3	1 l	40,75
				2625.4	2.5 l	70,45
N,*N*'-Dimethylpropylene urea	SOLVAGREEN® ≥99 %, for synthesis	Polar aprotic solvent, alternative for DMF and hexamethyl-phosphoramide (HMPA).	glass	**0662.1**	25 ml	26,80
				0662.2	100 ml	61,85
				0662.3	500 ml	181,70
Diphenyl carbonate	SOLVAGREEN® ≥99 %	Alternative for DMF, phosgene.	plastic	**2626.1**	100 g	17,10
				2626.2	500 g	32,80
				2626.3	1 kg	57,95
2-Methyltetrahydrofuran	SOLVAGREEN® ≥99 %, extra pure	Alternative for THF, dichloro-methane, DMSO, tBME/MTBE.	glass	**6845.1**	250 ml	32,15
				6845.2	500 ml	52,60
				6845.3	1 l	74,20

2-Pyrrolidone	SOLVAGREEN® ≥99,5 %, for synthesis	Alternative for NMP, NEP.	plastic	**8779.1**	500 ml	45,05
				8779.2	1 l	81,20
				8779.3	2.5 l	162,90
				8779.4	5 l	299,95

For additional product data and safety information, see chapter Chemicals A-Z.

SOLVAGREEN® – Green Solvents

Acetals

Acetals are made from an alcohol and an aldehyde. They form a chemical family with linear or cyclic structures that is stable in a neutral and basic environment.
Carl ROTH offers you a wide range of acetals with different properties. All acetals are easily miscible with organic solvents and most surfactants. The water miscibility, on the other hand, varies and depends strongly on the structure of the acetals.
Due to their high solubility, acetals are often used as solvents.
Fields of application:
• Replacement of more dangerous solvents
• Cleaning
• Synthesis

Acetals

Product name	Purity	General application	Pack.	Art. No.	Pack Qty.	€
Butylal	≥99 %, for synthesis	Alternative for D-limonene, cyclic hydrocarbons, perchloroethylene.	glass	**0796.1**	100 ml	21,00
				0796.2	500 ml	47,20
				0796.3	1 l	69,35
				0796.4	2.5 l	138,70
1,3-Dioxolane	≥90 %, for synthesis	Alternative for NMP, NEP, glycols, aromatics.	glass	**0447.1**	100 ml	18,20
				0447.2	500 ml	42,50
				0447.3	1 l	70,85
				0447.4	2.5 l	140,30
Ethylal	≥99,5 %, for synthesis	Alternative for ethanol, MEK, aromatics, butyl acetate.	glass	**0787.1**	100 ml	21,00
				0787.2	500 ml	45,70
				0787.3	1 l	67,20
				0787.4	2.5 l	134,40

				0797.2	500 ml	46,15
				0797.3	1 l	67,65
				0797.4	2.5 l	134,40
Glycerol Formal	≥99 %, for synthesis	Solvent for many applications, completely miscible with water.	glass	**0798.1**	100 ml	20,35
				0798.2	500 ml	45,70
				0798.3	1 l	67,20
				0798.4	2.5 l	131,70
Methylal	≥99,9 %, for synthesis	Acetal and protecting group. Alternative for dichloromethane, acetone, MEK.	glass	**3154.1**	100 ml	24,65
				3154.2	500 ml	51,10
				3154.3	1 l	70,45
				3154.4	2.5 l	138,70
	≥99,5 %, for synthesis	Acetal and protecting group. Alternative for dichloromethane, acetone, MEK.	glass	**0783.1**	100 ml	21,00
				0783.2	500 ml	45,70
				0783.3	1 l	66,55
				0783.4	2.5 l	132,15
Propylal	≥99 %, for synthesis	Alternative for aromatics.	glass	**0795.1**	100 ml	20,35
				0795.2	500 ml	44,00
				0795.3	1 l	64,40
				0795.4	2.5 l	127,40
Tetraoxaundecane	≥99 %, for synthesis	Alternative for NMP, NEP, glycols, aromatics.	glass	**0786.1**	100 ml	21,00
				0786.2	500 ml	46,15
				0786.3	1 l	69,35
				0786.4	2.5 l	131,70

For additional product data and safety information, see chapter Chemicals A-Z.

Tip:
Not every alternative solvent is suitable for every application. Carl ROTH offers you a wide range of alternative solvents to address the most diverse solvent problems. The acetals can also be used as an additive to normal, classic solvents.

NMR Spectroscopy

Deuterated Solvents

Deuterated reagents are used primarily in NMR spectroscopy.

Application examples:

- Routine tasks such as structure determination and identity verification in research and development laboratories.
- High degree of deuteration
- Defined water content
- Extremely cost effective

Reference Materials

Reference Standards

The reference standards are offered as powders with good flowability and crystallinity to guarantee efficient handling in the laboratory.
All products of this product line are filled in brown glass vials with screw caps and are packed in foil bags. This packaging provides optimum protection against environmental influences, even when stored over a long period of time. The reference standards are delivered as “ready-to-use” portions and are stored under controlled conditions.

Primary Standards

ROTI®Star Primary Standards for pharmaceutical and food analysis

ROTI®Star Primary Standards are extensively characterised by the analytical methods listed below and are supplied with a Primary Standard Certificate.
The certificate contains:

- Proof of identity with spectra, e.g. ^{1}H NMR, ^{13}C NMR, MS, UV
- Content determined with two independent validated methods, e.g. chromatographic purity and quantitative NMR
- Content of residual solvent determined with two different validated GC methods
- Water determination by Karl Fischer titration

Working Standards

ROTICHROM® Working Standards for Analysis

The **ROTICHROM® Working Standards** are traceable to established primary standards which are characterised extensively concerning identity and content. Therefore they can be used in all areas of analytics and they are a cost-saving alternative to primary standards. The standard comes with a certificate of analysis which includes proof of identity and defined assay. The substances are protected optimally against external influences with a high-quality glass and foil bag packaging.

► You can find our entire range of reference standards in our webshop under *Primary Standards ROTICHROM®* and *Working Standards ROTICHROM®*.

Exclusively for you in our webshop !

Reference Substances for Chromatography

ROTICHROM® HPLC/TLC/GC

Pure reference substances are essential for precise analysis. They are used for identifying compounds by retention time, for calibrating detectors, and for eliminating errors in quantification of the sample compounds.
Peak areas are proportional to sample quantity in all chromatographic methods. For precise quantitative analysis, however, it is necessary to calibrate the detector as the signal may significantly vary with different substances.
To avoid errors during sample preparation and injection, an internal standard should be used in any case. The standard must not be present in the sample, however, its chemical and physical properties ought to be the closest possible to the analytical targets. It must be well resolved in the chromatogram within the same range of retention time as the sample. Before sample analysis, a given volume of standard is added, and all clean-up procedures are made with the sample containing the standard. Quantitative errors may be compensated by comparing the peak-areas of the sample with that of the internal standard.

Reference substances
- ROTICHROM® HPLC
- ROTICHROM® TLC
- ROTICHROM® GC

are supplied with an HPLC-chromatogram, TLC-chromatogram and GC-chromatogram respectively, which is enclosed in the covering box.

Reference substances
- ROTICHROM® CHR

are delivered without chromatogram.

Reference Substances with Analytical Documentation

TLC, HPLC, ^{1}H-NMR, ^{13}C-NMR, UV, IR, MS
The high-purity substances in this product range are supplied with detailed analytical documentation. The documentation comprises approx. 20 pages and contains all important data on the analytical methods used. The results are usually confirmed by at least one-additional method. This ensures the greatest possible certainty in determining the content and checking the identity.

Product name	Purity (HPLC)	Art. No.	Pack Qty.	€

Reference Substances for HPLC

ROTICHROM® HPLC
Carl ROTH offers a broad range of reference substances for HPLC. These highly pure substances predominantly have a high HPLC purity level, which allows a meaningful analysis. You will find the certificate of analysis with HPLC chromatogram in the outer packaging.
ROTICHROM® HPLC – first choice for reference substances for chromatography.

Reference Substances for TLC

ROTICHROM® TLC et CHR$_{TLC}$
ROTICHROM® TLC reference substances are supplied with a certificate of analysis and a description of the chromatographic method, enclosed in the outer package.

A compound in this catalogue is designated as being thin-layer chromatographically pure (**CHR$_{TLC}$**) if no impurities can be detected during test conditions with 20 µg sample.

For products with impurities which under our conditions, (**CHR$_{TLC}$**), allow the main compound to be designated; such products can be identified as being "almost thin-layer chromatographically pure" (~**CHR$_{TLC}$**).

Product name	Quality	Art. No.	Pack Qty.	€
Acacetin	~CHR$_{TLC}$	**5010.1**	25 mg	145,15
Aloe-emodin	TLC	**3524.1**	100 mg	482,70

Reference Substances for GC

ROTICHROM® GC
Carl ROTH offers an extensive range of reference substances for gaschromatography from the substance groups of alkanes, alcohols, ketones, esters, aromatic compounds, and much more. Their GC purity allows an accurate analysis.
The **ROTICHROM® GC** substances come with a certificate of analysis and a GC chromatogram enclosed in the outer packaging.

Product name	Purity (GC)	Art. No.	Pack Qty.	€
Acetic acid L-bornyl ester	≥95 %	**9009.2**	100 mg	123,10
Acetic acid linalyl ester	≥95 %	**5199.2**	100 mg	107,40

	5437.2	100 g	332,20

For additional product data and safety information, see chapter Chemicals A–Z.

Aroma Glucosides

Flavour, fragrance and aroma substances have a decisive influence on our perception. Since many odorous and flavouring substances are very volatile and their chemical stability is limited, the desired effect quickly wears off in many cases. In many foods, hygiene products such as deodorants, liners and pads, as well as in perfumes and cosmetics, substances are already used that can be activated at the push of a button, so to speak, when they are needed – in other words, "flavour-on-demand". This principle has long been known in nature – "flowers do not need to smell at night".
In plants, corresponding odour and taste substances such as those found in fruits, wine or tea are linked by enzymes (glycosyltransferases) with various sugars (e.g. glucose) and thus converted into correspondingly inactive precursors, so-called "aromaglucosides".
Triggers such as heating, enzymes (glucosidases) or their activation during use or microbial degradation, the flavour and fragrance substances are released again in their active form, thus releasing the desired aroma. The only by-product of this release is glucose, i.e. dextrose.
The targeted release of flavour and fragrance compounds can give products an enhanced sensory profile and thus unparalleled performance.

Advantages:

- readily soluble in water
- no longer volatile
- chemically stable
- can be stored for longer

With our **ROTICHROM® HPLC standards** you can now identify these additives.

Fatty Acid References

ROTICHROM®

In the field of lipid analysis we put an extensive collection of reference substances and reference mixtures at the analyst's disposal.
All reference mixtures are prepared from pure components which are carefully tested for purity by TLC and GC.
Precise weighing and a final check guarantee the precision of the mixture. A certificate comes with each product.

Oils and Greases

Carl ROTH oils and greases are carefully manufactured from selected raw materials. They are of high purity and extensively specified. Therefore, they are suitable for a broad range of applications.

Product name	Brand/Purity	Synonymous	Art. No.	Pack Qty.	€
Avocado oil	refined	Oleum Perseae	**9341.1**	1 l	78,40
Castor oil	Ph. Eur., extra pure, virgin	Oleum Ricini	**4702.1**	1 l	37,55
			4702.3	2.5 l	67,65
			4702.4	5 l	112,90
			4702.2	10 l	209,65
Jojoba oil	all-natural		**7526.1**	100 ml	27,85
			7526.2	1 l	166,65
Lanolin	Ph. Eur., low in pesticides	Wool fat, Adeps Lanae anhydricum	**5314.2**	500 g	40,75
			5314.1	1 kg	71,95
	technical	Wool fat, Adeps Lanae anhydricum	**5313.2**	500 g	27,85
			5313.1	1 kg	45,70
Linseed oil	virgin, cold-pressed	Oleum Lini	**9338.2**	500 ml	34,30
			9338.1	1 l	52,70
			9338.3	2.5 l	99,45
Maize oil	Ph. Eur., refined	Oleum Maydis	**6212.1**	1 l	49,35
			6212.3	5 l	138,70
Oil of evening primrose	refined	Oleum Oenotherae	**3691.1**	50 ml	18,85
			3691.2	500 ml	83,75
Oil of sweet almond	refined	Oleum Amygdalae dulcis	**9342.1**	1 l	52,60
			9342.3	2.5 l	110,20
			9342.2	10 l	375,20
Oil of theobroma	pure, double filtered	Oleum Cacao	**3515.2**	100 g	21,40
			3515.1	500 g	68,70
Olive oil	Ph. Eur., virgin	Oleum Olivarum	**8873.1**	500 ml	31,10
			8873.2	2.5 l	107,40
Peanut oil	refined		**9332.2**	500 ml	21,40
			9332.1	1 l	32,15
			9332.3	2.5 l	59,05
Rapeseed oil	extra pure, refined	Colza oil, Oleum Rapae	**0754.1**	500 ml	17,10
			0754.2	1 l	25,70
			0754.3	2.5 l	53,25
			0754.4	10 l	139,25
			0754.5	25 l	289,20
Soybean oil	extra pure, refined	Oleum Sojae	**3686.1**	1 l	28,95
			3686.3	2.5 l	51,10
			3686.4	5 l	81,60
			3686.2	10 l	149,45
Stearic oil	technical		**9460.1**	1 l	37,55
Sunflower oil	extra pure, refined	Helianthi annui oleum	**1AAP.1**	1 l	25,70
			1AAP.2	2.5 l	53,25
			1AAP.3	10 l	139,25
			1AAP.4	25 l	289,20
Vaseline	Ph. Eur.		**5775.2**	500 g	23,55
			5775.1	1 kg	36,05
			5775.4	10 kg	198,90
Vaseline oil	technical, white	Oleum Vaselini album	**9336.1**	1 l	30,65
			9336.2	2.5 l	52,70
			9336.3	5 l	85,90

Essential Oils

Essential oils

Essential oils form in the oil glands of plants and are stored in the plant tissue. They can be found in blossoms, leaves, seeds, husks, roots, resins and bark or in the wood of a plant. Essential oils are generally extracted from plant components by steam distillation.

Our essential oils are carefully manufactured from selected raw materials. Our **natural oils** are composed of 80 % mother plant extracts. **Artificial oils** are manufactured from synthetic aromatic substances. The origin of the plant is specified via the country code.

Hypericon oil	pure	Oleum Hyperici	**9404.1**	250 ml	34,30
Laurel oil	essential, natural	Oleum Lauri aetherum	**6609.1**	100 ml	80,55
	artificial	Oleum Lauri	**3314.1**	250 ml	64,00
Musk oil	artificial		**3364.1**	100 ml	51,50
Oil of angelica roots	Hungarian, natural	Oleum Angelicae e seminis	**6587.1**	10 ml	104,85
Oil of anise	natural	Oleum Anisi	**7036.1**	100 ml	40,35
	artificial	Oleum Anisi	**3278.2**	100 ml	21,40
			3278.1	500 ml	64,00
Oil of balm	natural	Oleum Melissae indicum	**6507.1**	100 ml	21,40
Oil of basil	all-natural		**7039.1**	25 ml	56,45
Oil of bergamot	natural	Oleum Bergamottae	**6501.1**	50 ml	40,35
	artificial	Oleum Bergamottae	**3282.2**	100 ml	27,85
			3282.1	250 ml	45,70
Oil of cajeput	natural	Oleum Cajeput	**6105.1**	100 ml	34,30
			6105.2	500 ml	117,20
Oil of camphor	all-natural	Oleum Camphorae	**3357.1**	1 l	69,35
Oil of caraway	natural	Oleum Carvi	**7050.1**	25 ml	27,85
	artificial	Oleum Carvi	**3307.1**	250 ml	45,70
Oil of cassia	Chinese, natural	Oleum Cassiae	**6593.1**	100 ml	51,50
Oil of cedar leaf	pure	Oleum Foliorum cedri	**6594.1**	100 ml	104,85
	artificial	Oleum Foliorum cedri	**3291.2**	50 ml	24,65
			3291.1	250 ml	74,75
Oil of cedar wood	ready-to-use, for microscopic purposes	Oleum Ligni cedri	**5308.1**	100 ml	31,10
			5308.2	250 ml	64,40
			5308.3	500 ml	115,60
Oil of celery		Oleum Apii, Apium graveoleus oil	**7040.2**	5 ml	27,85
			7040.1	25 ml	74,75
Oil of cembra pine	pure	Oleum Cembrae	**4208.2**	25 ml	21,40
			4208.1	100 ml	56,45
Oil of chamomile	blue	Oleum Chamomillae	**6504.1**	10 ml	80,55
	Roman, natural	Oleum Chamomillae	**3354.1**	5 ml	45,70
	artificial	Oleum Chamomillae	**3305.1**	50 ml	69,35
Oil of cinnamon	natural	Oleum Cinnamomi ceylanici	**A432.2**	10 ml	21,40
			A432.1	50 ml	74,75
	artificial	Oleum Cinnamomi ceylanici	**6512.1**	50 ml	34,30
Oil of citronella	natural	Oleum Citronellae	**6502.1**	250 ml	51,50
	artificial	Oleum Citronellae	**3292.1**	500 ml	40,35
Oil of clary-sage	natural	Oleum Salviae sclareae	**3355.1**	25 ml	56,45
Oil of cloves	≥80 %, natural, rectified	Oleum Caryophyllorum	**8662.1**	250 ml	46,15
			8662.2	1 l	149,45
Oil of coriander	natural	Oleum Coriandri	**7052.1**	25 ml	27,85
Oil of cubeb	natural	Litsea, Oleum Cubebarum	**6608.1**	100 ml	34,30
Oil of cypress	French, natural	Oleum Cupressi	**6596.1**	100 ml	56,45
Oil of dill herb	all-natural	Oleum Anethi e herba	**6597.1**	100 ml	56,45
Oil of dill seed	extra pure	Oleum Anethi e seminis	**3352.1**	100 ml	56,45

Essential Oils

Oil of estragon	pure	Oleum Dracunculi	**6602.1**	50 ml	91,95
Oil of eucalyptus	nature identical	Oleum Eucalypti artificiale	**3297.2**	500 ml	40,35
			3297.1	1 l	69,35
Oil of fennel	artificial		**3299.2**	100 ml	21,40
			3299.1	500 ml	56,45
Oil of fir needles	artificial	Oleum Pini	**3301.1**	500 ml	45,70
Oil of gardensage	natural, Dalmatian	Oleum Salviae	**7075.1**	50 ml	34,30
Oil of garlic	natural	Oleum Allii sativi	**3540.2**	50 ml	80,55
			3540.1	100 ml	149,45
Oil of geranium	natural	Oleum Geranii	**7054.1**	25 ml	27,85
Oil of grapefruit	natural		**6718.1**	250 ml	115,60
Oil of juniper	pure	Oleum Juniperi e baccis	**7059.1**	25 ml	40,35
Oil of juniper wood	natural	Oleum Juniperi e ligno	**7057.1**	25 ml	24,65
Oil of lavandin	French		**6603.1**	100 ml	34,30
Oil of lavender	natural	Oleum Lavendulae	**3367.1**	250 ml	64,00
Oil of lemon	natural	Oleum Citri	**5213.1**	100 ml	46,80
	artificial	Oleum Citri	**3346.1**	500 ml	56,45
Oil of lemon-grass	all-natural	Cochin, Oleum Lemon-grass	**6606.1**	100 ml	34,30
Oil of lime	natural	Oleum Limettae	**6721.1**	50 ml	34,95
Oil of lovage	pure	Oleum Levistici	**6607.1**	10 ml	127,95
Oil of mandarin	Italian	Oleum Mandarinae	**3796.1**	100 ml	58,60
Oil of mint	Chinese, crude	Oleum Menthae arvensis	**6730.2**	50 ml	32,80
			6730.1	250 ml	129,55
	Japanese, natural	Oleum Menthae arvensis	**6731.2**	50 ml	24,65
			6731.1	250 ml	69,35
	rectified twice	Oleum Menthae arvensis	**6732.1**	50 ml	67,20
			6732.2	250 ml	252,65
Oil of niaouli	natural	Melaleuca viridiflora	**6610.1**	100 ml	40,35
Oil of nutmeg	essential	Oleum Myristicae aethereum	**7064.1**	50 ml	34,30
Oil of orange	bitter, Italian	Oleum Aurantii amari	**6509.1**	100 ml	45,70
	Brazilian	Oleum Aurantii	**3803.1**	100 ml	91,30
	Floridian	Oleum Aurantii amari	**6728.2**	250 ml	37,55
			6728.3	500 ml	69,80
			6728.1	1 l	127,95
	sweet, natural	Oleum Aurantii dulcis	**6611.1**	100 ml	56,45
Oil of orange flowers	artificial	Oleum Neroli	**3323.1**	50 ml	80,55
Oil of origanum	natural	Oleum Origani cretici	**6612.2**	25 ml	27,85
			6612.1	100 ml	74,75
Oil of palmarosa	East Indian	Oleum Palmae rosae	**6613.2**	25 ml	27,85
			6613.1	100 ml	56,45
Oil of parsley	French	Oleum Petroselini	**7072.1**	10 ml	27,85
Oil of patchouli	artificial		**6511.2**	25 ml	27,85
			6511.1	100 ml	74,75
Oil of pepper	natural	Oleum Piperis	**6616.2**	25 ml	40,35
			6616.1	100 ml	117,20
Oil of peppermint	pure, Italian	Oil of mint, Oleum Menthae piperitae	**7063.1**	25 ml	34,30
	pure	Oil of mint, Oleum Menthae piperitae	**9318.1**	50 ml	34,95
	artificial	Oil of mint, Oleum Menthae piperitae	**3329.2**	100 ml	21,40
			3329.1	500 ml	56,45
Oil of petitgrain	South American	Oleum Petigrain americ.	**6614.1**	100 ml	56,45
Oil of rose	Bulgarian, natural	Oleum Rosae	**5733.1**	1 ml	56,45
			5733.2	10 ml	407,45
	artificial	Oleum Rosae	**4092.1**	10 ml	34,30
Oil of rosemary	Spanish	Oleum Rosmarini	**6514.1**	100 ml	34,30
	artificial	Oleum Rosmarini	**3336.2**	100 ml	21,40
			3336.1	500 ml	64,00
Oil of rose-wood	nature identical	Oleum Ligni Rhodii	**3275.2**	50 ml	52,15
			3275.1	100 ml	94,10
Oil of sandal-wood	West Indian	Oleum Santali	**6620.2**	25 ml	21,40
			6620.1	100 ml	56,45
	artificial	Oleum Santali	**3341.2**	50 ml	24,65
			3341.1	250 ml	69,35
Oil of Scotch pine needles	natural	Oleum Pini silvestris	**7073.1**	100 ml	40,35
	artificial	Oleum Pini silvestris	**3306.2**	250 ml	27,85
			3306.1	500 ml	56,45
Oil of silver fir	artificial	Oleum Abietis	**3295.1**	250 ml	34,30
Oil of silver fir cones	natural	Oleum Templini	**6598.1**	100 ml	64,00
Oil of silver fir needles	natural	Oleum Abietis	**3353.1**	100 ml	51,50
Oil of spike	all-natural	Oleum Spicae	**7079.1**	50 ml	34,30
Oil of tansy	pure	Oleum Tanaceti	**7081.2**	5 ml	21,40
			7081.1	25 ml	62,25
Oil of tea tree	Australian, natural	Melaleuca alternifolia aetheroleum	**K032.1**	50 ml	34,30

Essential Oils

Product name	Brand/Purity	Synonymous	Art. No.	Pack Qty.	€
Oil of thyme	natural	Oleum Thymi	**K500.1**	50 ml	51,50
	nature identical	Oleum Thymi	**6513.1**	100 ml	27,85
Oil of valerian	all-natural	Oleum Valerianae	**6588.2**	10 ml	56,45
			6588.3	25 ml	117,20
			6588.1	50 ml	224,70
	artificial	Oleum Valerianae	**3279.1**	100 ml	40,35
Oil of vetiver	natural	Oleum Vetiverae	**6622.2**	10 ml	27,85
			6622.1	50 ml	104,85
Oil of wintergreen	artificial	Oleum Gaultheriae	**7053.1**	100 ml	40,35
Oil of ylang-ylang	comoric, all-natural	Oleum Anonae	**6624.2**	25 ml	56,45
			6624.1	100 ml	188,15
	artificial	Oleum Anonae	**3343.2**	50 ml	21,40
			3343.1	250 ml	74,75

For additional product data and safety information, see chapter Chemicals A–Z.

Sugar (Carbohydrates)

Carbohydrates or Saccharides make up 50 % of the dry biomass of the earth and are therefore the most frequent class of biomolecules. Besides at least two hydroxy groups, they also have an aldehyde or a ketone group and can be subdivided according to the number of monomeric components in mono-, di-, oligo and polysaccharides.

Whereas mono-, di- and oligosaccharides are soluble in water, taste sweet and are therefore called as sugar, polysaccharides are hardly, or not at all, soluble in water and have a neutral taste.

Carbohydrates, together with fats and proteins make up a large percentage of nutrition. In addition to their central role as an energy source, they are also an important structural component especially in plants (e.g. Cellulose). Ribose, a monosaccaride with five carbons ($C_5H_{10}O_5$) is an essential element of coenzymes (such as ATP, FAD and NAD) and a structural component of RNA. Desoxyribose (a ribose derivative) is a structural component of DNA.

Monosaccharides

Monosaccharides are the simplest carbohydrates that cannot be hydrolysed further. They consist of one sugar unit (monosaccharide). The general formula for unmodified monosaccharides is $C_n(H_2O)_m$. The most important representatives of monosaccharides are glucose and fructose.

Product name	Brand/Purity	Art. No.	Pack Qty.	€
N-Acetyl-D-galactosamine	≥99 %, for biochemistry	**4114.1**	250 mg	42,50
		4114.2	1 g	128,50

Disaccharides

Disaccharides consist of two monosaccharide units. These are interlinked covalently via a glycocide bond. The most familiar representatives are saccharose, lactose and maltose.

Product name	Brand/Purity	Art. No.	Pack Qty.	€
D(+)-Cellobiose	≥98 %, for biochemistry	**5840.1**	5 g	23,55
		5840.3	25 g	73,00
		5840.2	100 g	256,95
β-D-Gentiobiose	≥98 %, for biochemistry	**4123.4**	100 mg	58,60

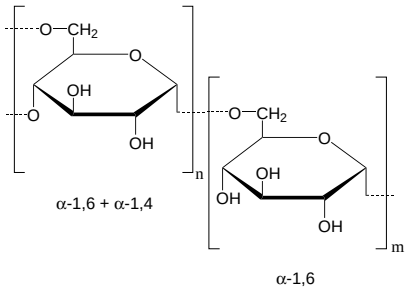
Oligo- and polysaccharides



Oligosaccharides consist of three to nine monosaccharide units.
Polysaccharides are macromolecular substances that consist of ≥10 monosaccharide units. A distinction is made between homoglycans, which are made up of only one type of monosaccharides (e.g. starch) and heteroglycans, which consist of at least two different monomeric components (e.g. xanthan).

Product name	Brand/Purity	Art. No.	Pack Qty.	€
Alginic acid	≥98 %, for biochemistry	**8696.1**	250 g	36,45

Dextrans

Dextrans are highly branched macromolecular biopolysaccharides. They consist exclusively of glucose monomers and belong to the homoglycans. Natural dextrans have molecular masses between 10 and 50000 kg/mol. Dextrans are soluble in water, whereby the solubility depends on the molecular mass. Here, highly viscous, gel-like liquids are formed. Due to the very broad molecular mass distribution of the various dextrans and the associated differences in terms of solubility in water, dextrans have numerous applications.
Thanks to their special properties, dextrans play an important role in many areas. For e.g. dextrans are used in chromatography, both as a carrier in affinity chromatography and (in modified form) for Gel Permeation Chromatography (GPC). Furthermore, they are used as a measurement standard in membrane technology and in adhesives as well as coatings, or as an auxiliary material for paper and textile manufacture.

Product name	Purity	Art. No.	Pack Qty.	€
DEAE Dextran	for biochemistry	**4198.1**	25 g	73,00
		4198.2	100 g	238,15

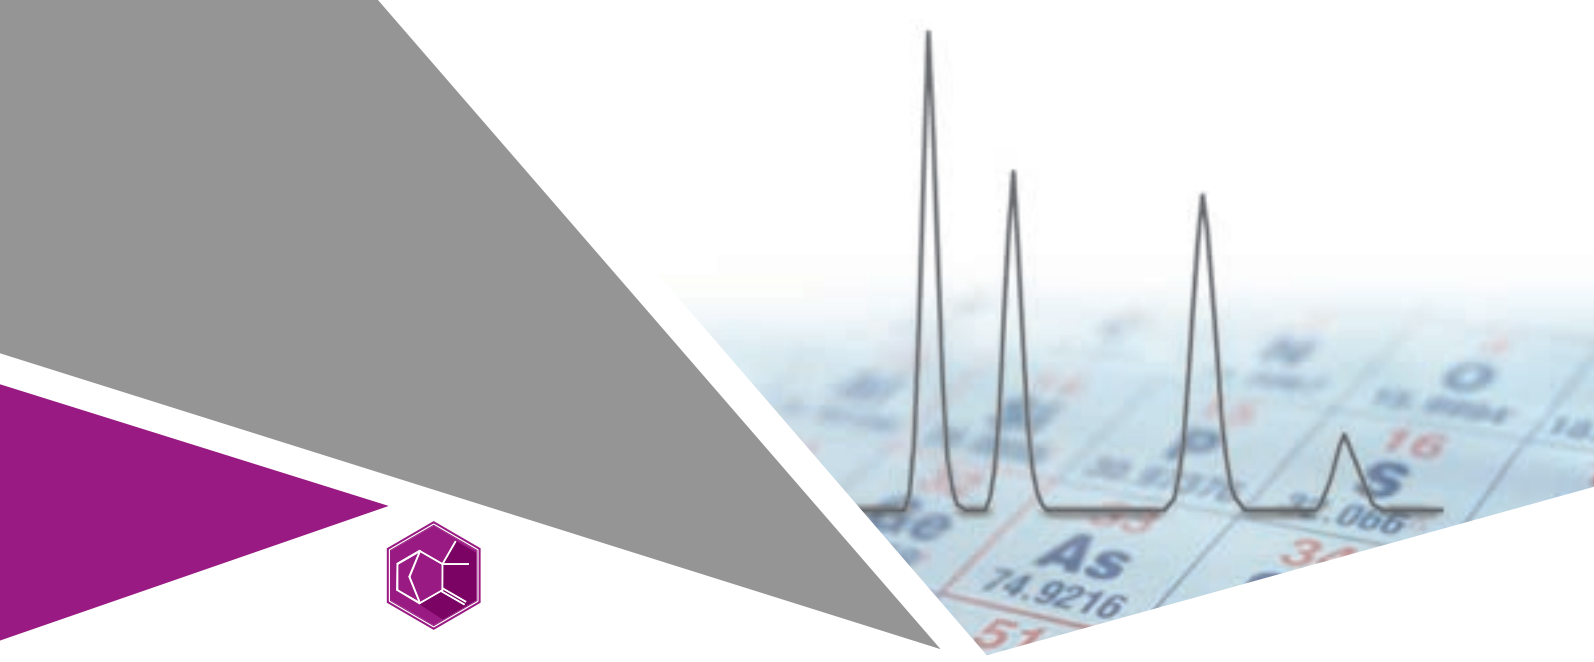
Vitamins



Vitamins are involved in many metabolic reactions. We can supply a range of high-purity substances suitable for biochemical applications in research and development.

Vitamins

Product name	Purity	Synonymous	Art. No.	Pack Qty.	€
4-Aminobenzoic acid	≥98,5 %, for synthesis	PABA, Vitamin B_{10}, *p*-Aminobenzoic acid	**0979.1**	50 g	21,00
			0979.2	250 g	40,75
			0979.3	1 kg	117,75
L(+)-Ascorbic acid	≥99 %, p.a.	Vitamin C	**3525.1**	100 g	16,05
			3525.2	250 g	22,50
			3525.3	500 g	38,20
	≥99 %, Ph. Eur., USP, BP	Vitamin C	**6288.1**	100 g	16,70
			6288.2	250 g	24,65
			6288.3	1 kg	80,55
L(+)-Ascorbic acid sodium salt	≥99 %, USP, for biochemistry	Sodium L(+)-ascorbate	**3149.1**	100 g	28,95
			3149.2	500 g	85,90
D(+)-Biotin	≥98,5 %, Ph. Eur., for biochemistry	Vitamin H	**3822.2**	500 mg	38,60
			3822.1	1 g	70,85
			3822.3	5 g	203,20
			3822.4	10 g	342,95
			3822.5	25 g	654,70
Calcium D(+)-pantothenate	≥98 %, Ph. Eur., for biochemistry	D(+)-Pantothenic acid calcium salt, Vitamin B_5 calcium salt	**3812.2**	100 g	45,05
			3812.1	250 g	90,85
Folic acid	≥96 %, for biochemistry	Pteroyl glutamic acid, Vitamin B_9	**T912.1**	25 g	53,65
			T912.2	50 g	99,90
Nicotinic acid	≥99,5 %, for biochemistry	3-Pyridine carboxylic acid, Niacin, Vitamin B_3	**3815.1**	100 g	44,65
			3815.2	250 g	89,15
Pyridoxine hydrochloride	≥99 %, for biochemistry	Adermine hydrochloride, Vitamin B_6 hydrochloride	**T914.1**	50 g	37,10
			T914.2	100 g	64,40
Riboflavine	≥97 %, Ph. Eur., for biochemistry	Lactoflavine, Vitamin B_2	**9607.1**	25 g	38,60
			9607.2	50 g	67,65
			9607.3	100 g	115,60
			9607.4	250 g	224,70
Thiamine hydrochloride	≥98,5 %, for biochemistry	Aneurine hydrochloride, Thiamine chloride hydrochloride, Vitamin B_1 hydrochloride	**T911.1**	25 g	27,45
			T911.2	100 g	75,80
			T911.3	250 g	166,65
DL-α-Tocopherol	≥96 %, Ph. Eur., oily	Vitamin E	**3806.2**	25 g	42,50
			3806.1	100 g	120,95
			3806.3	250 g	256,95
DL-α-Tocopherol acetate	≥96,5 %, Ph. Eur., oily	Vitamin E acetate	**3805.2**	25 g	38,60
			3805.1	100 g	107,00
			3805.3	250 g	213,95
Vitamin B_{12}	≥96 %, for biochemistry	Cyanocobalamin	**T915.1**	500 mg	53,65
			T915.2	1 g	92,35
			T915.3	2.5 g	192,45
Vitamin K_1	≥97 %, for biochemistry	Phylloquinone, Phytomenadione	**3804.1**	1 g	35,40
			3804.3	5 g	117,20
			3804.2	10 g	209,65

ROTI®Cap High Performance Capillary Columns

The proved Carl ROTH series of high performance capillary columns for gas chromatography.

ROTI®Cap capillary columns set standards:
Low column bleed
Modern manufacturing processes offer capillaries with lower bleed levels, which are especially suitable for GC-MS. Less column bleed yields increased sensitivity and accuracy through a better signal to noise ratio for any kind of detector. Further reduced column bleed improves detectability of solutes in qualitative and quantitative GC-MS analyses.
High thermal stability
Due to high temperature stability ROTI®Cap capillary columns can be operated at about 40 °C higher temperatures compared to standard phases. Thanks to these elevated working temperatures, high-boiling components, which exhibit very long retention times and wide peaks on standard phases, elute earlier and with a more well-formed peak.
High inert columns due to optimised deactivation
Polar compounds are frequently difficult to analyse because they often give broad tailing peaks. Advances in deactivation technology for the ROTI®Cap capillaries result in an excellent chromatographic performance yielding improved peak shapes of polar compounds combined with improved efficiency and sensitivity.
In order to guarantee best industry standard capillaries with highest reproducibility from column to column ROTI®Cap capillary columns have to meet high specifications.
Within the **quality control** the following parameters are determined:

- **Separation Efficiency** by measuring the separation number (acc. to Kaiser) in a temperature programme phases
- **Polarity** by measuring retention indices
- **Bleeding** in a temperature programme with a test mixture including high-boiling hydrocarbons
- **Inertness** by measuring the peak height ratio for decylamine/C_{12} (for non-polar to medium polar phases)

Overview ROTI®Cap capillary columns:

GC capillary column	Configuration of the column	USP phase	Similar phases	Polarity
ROTI®Cap-1	100 % dimethylpolysiloxane	G1/G2/G38	OV-1, DB-1, SE-30, HP-1, SPB®-1, CP-Sil 5 CB, Rtx®-1, 007-1, BP1, MDN-1, AT™-1, ZB 1, OV 101	lowest
ROTI®Cap-1 MS	100 % dimethylpolysiloxane	G1/G2/G38	Ultra 1, DB-1 MS, Rtx®-1 MS, HP-1 MS, Equity®-1, AT™-1 MS, VF-1 MS, CP-Sil 5 CBMS	
ROTI®Cap-5	5 % phenyl - 95 % methylpolysiloxane	G27/G36	SE-54, SE-52, HP-5, SPB®-5, CP-Sil 8, Rtx®-5, 007-5, BP5, MDN-5, AT™-5, ZB-5	
ROTI®Cap-5 MS	5 % phenyl - 95 % dimethylpolysiloxane	G27/G36	DB-5, B-5 MS, HP-5 MS, Ultra-2, Equity®-5, CP-Sil 8CB low bleed/MS, Rtx®-5SIL-MS, Rtx®-5 MS, 007-5 MS, BPX-5, MDN-5S, AT™-5 MS, VF-5MS	
ROTI®Cap-5 MS Ultra	silarylene phase with selectivity similar to 5 % phenyl - 95 % methylpolysiloxane	27/G36	DB-5, B-5 MS, HP-5 MS, Ultra-2, Equity®-5, CP-Sil 8CB low bleed/MS, Rtx®-5SIL-MS, Rtx®-5 MS, 007-5 MS, BPX-5, MDN-5S, AT™-5 MS, VF-5MS	
ROTI®Cap-5 HT	silarylene phase with selectivity similar to 5 % phenyl - 95 % methylpolysiloxane	27/G36	DB-5 HT, VF-5 HT, HT-5, XTI-5HT, ZB-5HT	
ROTI®Cap-624	6 % cyanopropyl-phenyl - 94 % dimethylpolysiloxane	G43	HP-624, HP-VOC, DB-624, DB-VRX, SPB-624, CP-624, Rtx®-624, Rtx®-Volatiles, 007-624, BP624, VOCO	
ROTI®Cap-1701	14 % cyanopropyl-phenyl - 86 % dimethylpolysiloxane	G46	OV-1701, DB-1701, CP Sil 19 CB, HP-1701, Rtx®-1701, SPB®-1701, 007-1701, BP10, ZB-1701	
ROTI®Cap-1701 MS	silylarylene phase with selectivity similar to 14 % cyanopropyl-phenyl - 86 % dimethylpolysiloxane	46	VF-1701ms, TG-1701MS, OV-1701, DB-1701, HP-1701, Rtx®-1701, SPB®-1701, CP-Sil 19 CB, 007-1701, BP10, ZB-1701	
ROTI®Cap-35 MS	silylarylene phase with selectivity similar to 35 % phenyl - 65 % methylpolysiloxane	42/G28/G32	DB-35 MS, HP-35, SPB®-35, Rtx®-35, 007-35, BPX-35, MDN-35, AT™-35 MS, ZB-35, OV-11, VF-35 MS

GC Capillary Columns ROTI®Cap-1

100 % Dimethylpolysiloxane

- **Non-polar**
- Solvent rinsing applicable
- **Working temperature limits:**
  for columns with 0.10–0.32 mm inner diameter and films <3 µm:
  340 °C for isothermal operation
  360 °C for short isotherms in a temperatur programme
  for columns with 0,53 mm inner diameter and films <3 µm:
  320 °C for isothermal operation
  340 °C for short isotherms in a temperature programme
  for thick film columns with films ≥3 µm:
  300 °C for isothermal operation
  320 °C for short isotherms in a temperature programme
- **Application areas:** Excellent column for routine applications.

Pre-columns available on request

Each column is individually tested and supplied with test certificate and test chromatogramm. Columns have fused ends or are sealed with septa, to protect them from atmospheric oxygen. Ferrules or fittings are not included.

GC Capillary Columns ROTI®Cap-1 MS

100 % Dimethylpolysiloxane

- **Non-polar**
- Low column bleed
- Selectivity identical to -1
- **Working temperature limits:**
  340 °C for isothermic operation
  360 °C for short isothermes in a temperature programme
- **Application areas:** Ideal for GC-MS- and ECD applications and general analysis at trace level

Similar phases:

GC Capillary Columns ROTI®Cap-5 MS Ultra

Silarylene Phase

- **Non-polar**
- Polarity similar to a **5 % diphenyl – 95 % dimethylpolypropylene phase**
- **Extremely low column bleed**
- Solvent rinsing applicable for removing impurities
- **Working temperature limits:**
  340 °C for isothermal runs
  360 °C for short isothermal runs in a temperature programme
  for columns with film thickness >0,5 µm:
  320 °C for isothermal runs
  340 °C for short isothermal runs in a temerature programme
- **Application areas:** all-round phase for environmental analysis, trace analysis, EPA methods, pesticides, PCBs, food and drug analysis. Ideal for ion-trap and quadrupol detectors

Similar phases:

GC Capillary Columns ROTI®Cap-5 HT

Silarylene Phase

- **Non-polar**
- Selectivity similar to a **5 % phenyl – 95 % methylpolysiloxane phase**
- Low column bleed
- Solvent rinsing applicable
- **Working temperature limits:**
  380 °C for isothermal operation
  400 °C for short isothermal operation in a temperature programme
- **Application areas:** simulated distillation, hydrocarbon, fuel, oil analysis, high boiling analytes, ideal for MS detectors

Similar phases:

- DB-5HT, VF-5HT, HT-5, XTI-5HT, ZB-5HT
- Equivalent to USP phases G27/G36

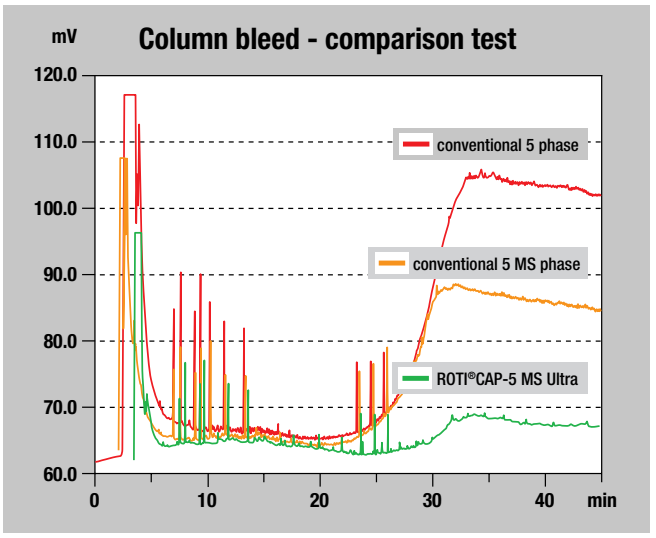

Fig.: The bleed comparison test of the **ROTI®CAP 5 MS Ultra** with a conventional 5 phase and 5 MS phase shows the outstanding performance of the silarylene phase.

GC Capillary Columns ROTI®Cap-XLB

Silarylene phase with optimised silarylene content for lowest column bleed

- **Non-polar**
- Very low column bleed
- **Working temperature limits**:
  340 °C for isothermic operation
  360 °C for short isothermes in a temperature programme
- Ideal for ion trap and quadrupol analyzers
- Perfect inertness for basic compounds
- Solvent rinsing applicable for removing impurities
- **Application areas**: highly selective for environmental and trace analyses, pesticides
- Recommended for the separation of PCBs

Similar phases:

- DB-XLB, Rtx®-XLB, Rxi®-XLB, MDN-12, VF-XMS

GC Capillary Columns ROTI®Cap-624

6 % Cyanopropylphenyl – 94 % Dimethylpolysiloxane

- **Medium polar**
- **Working temperature limits:**
  280 °C for isothermal operations
  300 °C for short isotherms in a temperature programme
- **Application areas:** recommended for environmental analysis

Similar phases:

- HP-624, HP-VOC, DB-624, DB-VRX, SBP®-624, CP-624, Rtx®-624, Rtx®-Volatiles, 007-624, BP624, VOCOL®
- Equivalent to USP phase G43

GC Capillary Columns ROTI®Cap 1701-MS

Silarylene Phase

- **Medium polar**
- Silarylene phase with selectivity analogue to a **14 % cyanopropyl-phenyl – 86 % dimethyl polysiloxane**
- **Very low column bleed**
- **Working temperature limits:**
  280 °C for isothermal runs
  300 °C for short isothermal runs in a temperature programme
- **Application areas:** Reference column for structure determination, e.g., in combination with ROTI®Cap-5 MS; suitable for environmental analysis (e.g. PAHs, PCBs, pesticides)

Similar phases:

- VF-1701ms, TG-1701MS, OV-1701, DB-1701, HP-1701, Rtx®-1701, SPB®-1701, CP-Sil 19 CB, 007-1701, BP10, ZB-1701
- Equivalent to USP phase G46

GC Accessories

Injection Port Septa

GC Septa CenterGuide™

Advantages:

- Produced individually using injection moulding procedure
- CenterGuide™ for centred needle guidance and thus perfect fit
- Precision indentations for perfect seat
- Special coating for easy replacement without fixed jaw on the injector
- Blister pack for clean and immediately usable septa

CenterGuide™ BTO Septa

For highest demand in GC and GC-MS

Diamond file for cutting of fused silica capillaries

Diamond file is used for cutting capillaries and smoothing ends of capillaries. Square capillary ends without protruding particles are especially important for butt connections (e.g., in Valco unions).

Designation	Art. No.	Pack Qty.	€
Diamond file	**1K2E.1**	1 unit(s)	88,30

► For reference substances for the GC see page 494

Derivatisation Reagents for GC

Derivatisation reagents are used mainly in gas chromatography when adequate volatility or stability of the substances to be separated is required. Detection sensitivity can also be increased through derivatisation.
Our range of derivatisation reagents is ideal for acylation, alkylation and silylation of reagents.

Reagents for Silylation

Product name	Purity	Pack.	Art. No.	Pack Qty.	€
γ-Aminopropyltriethoxysilane (APTES)	≥98 %, for the GC	glass	**2328.1**	25 g	26,80

N,*N*-Dimethylformamide dimethyl acetal (DMF-DMA)	≥98 %, for the GC	glass	**6870.1**	5 ml	28,95
			6870.2	25 ml	45,05
			6870.3	100 ml	149,45
			6870.4	500 ml	542,90
Trimethylsulfonium hydroxide in methanol	~0,2 M, GC	septum bottle	**9934.1**	10 ml	152,65

For additional product data and safety information, see chapter Chemicals A–Z.

Septum bottle: Aluminium seal with PTFE-lined rubber disc (septum). The pierced septum is no longer absolutely air-tight, therefore we suggest to use up the content as quickly as possible and keep the vial standing upright. Otherwise the reagents come in contact with the rubber which results in their contamination to the point of making them useless.

Solvents for MOSH/MOAH Analysis

For identifying petroleum-derived saturated and aromatic hydrocarbons.

The analysis and quantitative identification of MOSH/MOAH constituents is performed as a sum parameter. The sample is extracted using *n*-hexane and verified using coupled liquid chromatography-gas chromatography.
MOSH: Mineral oil saturated hydrocarbons (paraffins and naphthenes)
MOAH: Mineral oil aromatic hydrocarbons (mono- or polyaromatic rings)

n-Hexane

ROTISOLV® ≥99 %, MOSH/MOAH

Suitable for MOSH/MOAH analysis.

ROTISOLV® GC Ultra Grade Solvents

for gaschromatographic and residue analysis

In order to monitor and analyse environmentally relevant substances such as pesticides, dioxins, furans, PAH, PCB etc. in trace analysis, solvents with exceedingly high purity specifications are required. Carl ROTH's ROTISOLV® GC Ultra Grade solvents have been developed specially for this application area and are produced with the most sophisticated production processes. Extensive quality checks guarantee the same high-grade quality from batch to batch.

Properties:

- Highest purity
- Very low water content
- Non-volatile matter less than 2 ppm
- Quality control by means of ECD and NPD
- PAH-test
- Filtered through 0,2 µm membrane
- Bottled under protective gas

Product name	Purity	Pack.	Art. No.	Pack Qty.	€
Acetic acid ethyl ester	≥99,9 %, GC Ultra Grade	glass	**KK42.1**	2.5 l	98,80
Acetone	≥99,9 %, GC Ultra Grade	glass	**KK40.1**	2.5 l	88,70
Cyclohexane	≥99,9 %, GC Ultra Grade	glass	**KK41.1**	2.5 l	117,75
Dichloro-methane	≥99,9 %, GC Ultra Grade	glass	**KK47.1**	2.5 l	91,30

Methanol	≥99,9 %, GC Ultra Grade	glass	**KK44.1**	2.5 l	66,15
n-Pentane	≥99 %, GC Ultra Grade	glass	**KK45.1**	2.5 l	270,40
Toluene	≥99,8 %, GC Ultra Grade	glass	**KK46.1**	2.5 l	99,45

For additional product data and safety information, see chapter Chemicals A–Z.

Safety data sheets
can be found on the Internet next to the product description.

ROTISOLV® Pestilyse® plus Solvents

for determination of dioxines, furanes, PCBs, pesticides, hydrocarbons and further pollutants

Carl ROTH created this product line (ROTISOLV® Pestilyse® plus) especially to address the growing requirements in residue analysis. Several relevant parameters are specified for these solvents which allow the use in various applications. With this product line, Carl ROTH sets the benchmark for residue analysis solvents in terms of purity and quality.

Properties:

- Highest purity
- Controlled by FID, ECD and NP
- PAH tested
- Tested for hydrocarbons C_{14}-C_{40}
- Tested for fluorescence
- Volatile impurities: max. 5 ppm
- Non-volatile impurities: max. 5 ppm

ROTISOLV® Pestilyse® Solvents

for residue and environmental analysis

Field of application: 'Pesticide Residue Analysis' (via ECD, PND detection) in sectors environment, foodstuff, water, etc. ROTISOLV® Pestilyse® solvents are ideal as extraction agents and for sample preparation.

Properties:

- Highest purity
- Quality control via ECD and PND
- Non-volatile parts: 5 ppm or less
- Specially purified for application in pesticide residue analysis

ROTISOLV® Headspace Grade Solvents

for analyses of organic volatile impurities (O.V.I.)

Headspace gas chromatography is a major quality control procedure particularly in the pharmaceutical and food industry. The regulations for this method can be found both in the European as well as the American Pharmacopoeia.
High-boiling solvents of excellent purity, which show no background due to organic volatile impurities on the GC-column, are required for determining solvent residue.

Properties:

- Highest purity (mostly ≥99,99 %)
- High boiling point
- Non volatile matter: ≤0,001 %
- Tested for headspace suitability
- Bottled under protective gas
- Microfiltered

Product name	Purity	Art. No.	Pack Qty.	€
N,*N*-Dimethylacetamide (DMA)	≥99,99 %, Headspace Grade	**HN45.1**	1 l	327,90
N,*N*-Dimethylformamide (DMF)	≥99,99 %, Headspace Grade	**HN46.1**	1 l	309,10
1,3-Dimethyl-2-imidazolidinone (DMI)	≥99,5 %, Headspace Grade	**HN48.1**	500 ml	1.177,15
Dimethyl sulphoxide (DMSO)	≥99,99 %, Headspace Grade	**HN47.1**	1 l	327,90

For additional product data and safety information, see chapter Chemicals A–Z.

Thin Layer Chromatography (TLC)

Although the principle of thin-layer chromatography is more than a century old, it did not make its breakthrough as an analytical method until about 50 years ago.
Thanks to the development of new sorbents and supports, as well as increasing instrumentation and automation, TLC has become a versatile separation method. It is used both in qualitative analysis and in quantitative analysis.
Applications range from simple manual separation processes in classic TLC to automated processes in HPTLC (high performance thin layer chromatography).
Advantages of thin layer chromatography:

- Higher sample throughput in less time
- Suitable for screening tests
- Pilot process for HPLC
- The ready-to-use TLC layer functions as a data storage device for separation results
- The separated substances can be used later for further analysis (e.g. IR, MS)
- By switching the mobile and the stationary phases, the separation process can be optimised quickly and cost-efficient

TLC Plates ROTI®ChromaPlate with Standard Silica Gel 60

Optimum adhesion of silica gel to the plate by using a highly resistant polymer-based binder (resistant to water and organic solvents and dyeing reagents).

- Specific surface: approx. 500 m^2/g
- Medium pore width: 60 Å
- Specific pore volume: 0,75 ml/g
- Particle size: 5–17 µm

Properties:

- Reproducibly good separation performance due to complete wettability with organic and aqueous solvents.
- Mechanical cutting without cracks or chipping of silica gel.

TLC Plates by Macherey Nagel

Layers for TLC at a glance

Code	Layer	Recommended application(s)
Standard silica		
ADAMANT	silica 60 with improved binder system and optimised particle size distribution	Anthrachinone dyes, Barbiturates, Flavonoids, Normal phase (NP), Pain killers, Trace analysis, Vitamins
SIL G	silica 60, standard grade	Aflatoxins, Alkaloids, Amines, Amino acids, Analgetics, Antibiotics, Hormones, Marihuana compounds, Normal phase (NP), Patulin, Standard TLC applications, Steroids, Sweeteners, Vitamins
Unmodified silica for HPTLC		
Nano-SIL	nano silica 60, particle size 2–10 µm, standard grade	Aflatoxins, Alkaloids, Amines, Amino acids, Analgetics, Antibiotics, Hormones, Marihuana compounds, Normal phase (NP), Patulin, Steroids, Sweeteners, Vitamins
Modified silica for TLC/HPTLC		
Nano-SIL DIOL	diol-modified nano silica	steroids, pesticides and plant constituents; for critical separations an alternative to silica, since it is less sensitive to the water content of the environment; leads to more reproducible results compared to silica.
Nano-SIL NH_2	amino-modified nano silica	vitamins, sugars, steroids, purine derivatives, xanthines, phenols, nucleotides and pesticides
Nano-SIL CN	cyano-modified nano silica	steroid hormones, phenols, preservatives
RP-2 / UV_{254}	silanised silica = dimethyl-modified silica 60	plant constituents, steroids
R-18 W/UV_{254}	nano silica with partial octadecyl modification, wetable with water	aminophenols, barbiturates, preservatives, nucleobases, PAHs, steroids, tetracyclines, phthalates
Aluminium oxide		
ALOX N	aluminium oxide	terpenes, alkaloids, steroids, aliphatic and aromatic compounds
Cellulose		
CEL 300	native fibrous cellulose MN 300	partition chromatography of polar substances such as amino acids, carboxylic acids or carbohydrates
CEL 400	microcrystalline cellulose MN 400 (AVICEL®)	carboxylic acids, lower alcohols, urea and purine derivatives

Supports for TLC layers

Physical/chemical properties	Glass plates	POLYGRAM® Polyester foils	ALUGRAM®/ALUGRAM® XTRA Aluminium foils
Thickness	~1,3 mm	~0,2 mm	~0,15 mm
Torsional stability	ideal	low	relatively high
Temperature stability	high	max. 185 °C	high
Can be cut with scissors	no	yes	yes
Resistance to solvents	high	high	high
Resistance to mineral acids and concentrated ammonia	high	high	low
Suitable for aqueous tracing reagents	depending on phase	ideally suited	ALUGRAM®: limited, ALUGRAM® Xtra: ideally suited

TLC Plates with Standard Silica Gel 60

- Specific surface: approx. 500 m²/g
- Medium pore width: 60 Å
- Specific pore volume: 0,75 ml/g
- Particle size: 5–17 µm

TLC Plates ADAMANT

Macherey-Nagel. Material: Glass plate with silica gel 60.

With improved binder system and optimised grain distribution.

Properties:

- Outstanding hardness and abrasion resistance due to an optimised binder system
- Increased separation efficiency due to an optimised particle size distribution
- High suitability for trace analysis resulting from an UV indicator with increased brilliance and a low noise background of the layer

Plate format (cm)	Art. No.	Pack Qty.	€
5 x 10	**N086.1**	50 unit(s)	141,90
10 x 10	**N087.1**	25 unit(s)	78,50
20 x 20	**N088.1**	25 unit(s)	184,90

TLC Plates ADAMANT UV_{254}

Macherey-Nagel. Material: Glass plate with silica gel 60, with fluorescence indicator.

With improved binder system and optimised grain distribution.

Properties:

- Outstanding hardness and abrasion resistance due to an optimised binder system
- Increased separation efficiency due to an optimised particle size distribution
- High suitability for trace analysis resulting from an UV indicator with increased brilliance and a low noise background of the layer

Plate format (cm)	Pack.	Art. No.	Pack Qty.	€

TLC Plates ALUGRAM® Xtra SIL G

Macherey-Nagel. Material: Aluminium sheet with silica gel 60.

Silica gel 60
Improved binder system for enhanced cutting and wettability.

The ready-to-use foils are produced with a special, highly polymeric binder, which is resistant towards almost all organic solvents and aggressive visualisation reagents. It is also completely stable in pure aqueous eluents.

Properties:

- Easy cutting of foils, **no flaking of silica**
- Outstanding wettability, precise colourisation even with 100 % aqueous eluents
- Excellent separation efficiency and reproducibility from lot to lot

Plate format (cm)	Art. No.	Pack Qty.	€
5 x 7,5	**3868.1**	20 unit(s)	26,25

HPTLC Plates with Nano Silica Gel

HPTLC Plates with Nano Silica Gel

Nano silica gel:

- Specific surface: approx. 500 m^2/g
- Medium pore width: 60 Å
- Specific pore volume: 0,75 ml/g
- Particle size: 2–10 µm

Advantages over the standard plates:

- Higher separation effect
- Shorter separation times and distances
- Smaller sample amounts of 0.01–0.1 µl (10–100 nanolitre)
- Lower diffusion due to extremely small amounts
- Higher detection sensitivity

HPTLC Plates Nano-SIL-20 with Nano Silica Gel

Material: Glass plate with nano silica gel 60.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 5	0.20	**N080.1**	100 unit(s)	246,20
10 x 10	0.20	**N081.1**	25 unit(s)	188,15
10 x 20	0.20	**N082.1**	50 unit(s)	441,85

HPTLC Plates Nano-SIL-20 / UV_{254} with Nano Silica Gel

Material: Glass with nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 5	0.20	**N083.1**	100 unit(s)	246,20
10 x 10	0.20	**N084.1**	25 unit(s)	188,15
10 x 20	0.20	**N085.1**	50 unit(s)	441,85

HPTLC Plates ALUGRAM® Nano-SIL G with Nano Silica Gel

Material: Aluminium sheet with nano silica gel 60.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.20	**AE82.1**	50 unit(s)	158,05
20 x 20	0.20	**AE83.1**	25 unit(s)	268,75

HPTLC Plates ALUGRAM® Nano-SIL G / UV_{254} with Nano Silica Gel

Material: Aluminium sheet with nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.20	**AE84.1**	50 unit(s)	158,05
20 x 20	0.20	**AE85.1**	25 unit(s)	268,75

HPTLC Plates ALUGRAM® Xtra Nano-SIL G with Nano Silica Gel

Material: Aluminium sheet with nano silica gel 60.

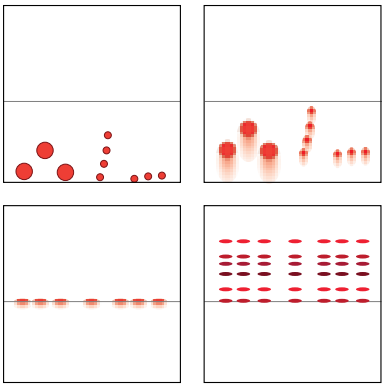

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.20	**3863.1**	50 unit(s)	158,05
20 x 20	0.20	**3895.1**	25 unit(s)	268,75

HPTLC Plates ALUGRAM® Xtra Nano-SIL G / UV_{254} with Nano Silica Gel

Material: Aluminium sheet with nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.20	**3952.1**	50 unit(s)	158,05
20 x 20	0.20	**3988.1**	25 unit(s)	268,75

TLC / HPTLC Plates with Concentration Zone

Concentrating zone as “rapid application zone” – quantitative evaluation of chromatograms is possible, even if samples applied irregular.

- better resolution due to focused bands
- excellent separation performance
- easier handling
- time saving during analysis

Diatomaceous earth zone for rapid sample application: because diatomaceous earth is completely inert towards a large number of compounds, the samples form a narrow band at the interface of the two adsorbents, irrespective of shape, size or position of the spots in the concentrating zone. The sample concentrates within seconds as a narrow band at the interface of the two adsorbents. Separation then takes place in the silica layer.

TLC Plates ALUGRAM® Xtra SILGUR / UV_{254} with Standard Silica Gel 60 and concentration zone

Macherey-Nagel. Material: Aluminium sheet with silica gel 60, with fluorescence indicator.

Plate format (cm)	Art. No.	Pack Qty.	€
10 x 20	**1HAK.1**	20 unit(s)	78,50
20 x 20	**1HAL.1**	25 unit(s)	151,60

HPTLC Plates ALUGRAM® Xtra Nano-SILGUR / UV_{254} with Nano Silica Gel and concentration zone

Material: Aluminium sheet with nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.20	**1HAH.1**	25 unit(s)	235,45

► For comparative substances for the TLC see page 493

TLC / HPTLC Plates with Modified Silica Gel

Order of polarity:
silica > DIOL > NH_2 > CN > RP-2 > RP-18 W

HPTLC Plates – diol-modified

Diol modification
Carbon content 5,5 %

Order of polarity:
silica > **DIOL** > NH_2 > CN > RP-2 > RP-18 W

Layer can be equally well wetted by pure water and organic solvents, respectively.
Tip: for critical separations an alternative to silica, since it is less sensitive to the water content of the environment; leads to more reproducible results compared to silica.

HPTLC Plates Nano-SIL DIOL / UV_{254} – diol-modified

Macherey-Nagel. Material: Glass plate with diol-modified nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.20	**4699.1**	25 unit(s)	374,10

HPTLC Plates – amino-modified

Aminopropyl modification
Carbon content 3,5 %

- pH stability: 2–8
- Layer can be equally well wetted by pure water and organic solvents, respectively.

Order of polarity:
silica > DIOL > **NH_2** > CN > RP-2 > RP-18 W

HPTLC Plates Nano-SIL NH_2 – amino-modified

Macherey-Nagel. Material: Glass plate with amino-modified nano silica gel 60.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.20	**3500.1**	25 unit(s)	374,10

HPTLC Plates Nano-SIL NH_2 / UV_{254} – amino-modified

Macherey-Nagel. Material: Glass plate with amino-modified nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.20	**3652.1**	25 unit(s)	374,10
10 x 20	0.20	**3660.1**	25 unit(s)	569,75

HPTLC Plates ALUGRAM® Nano-SIL NH2 / UV_{254} – amino-modified

Macherey-Nagel. Material: Aluminium sheet with amino-modified nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
4 x 8	0.15	**3723.1**	50 unit(s)	210,70
20 x 20	0.15	**3767.1**	25 unit(s)	569,75

HPTLC Plates – cyano-modified

Cyanopropyl modification
Carbon content 5,5 %

Order of polarity:
silica > DIOL > NH_2 > **CN** > RP-2 > RP-18 W

Normal phase or reversed phase separation modes depending on the polarity of the developing solvent

HPTLC Plates Nano-SIL CN / UV_{254} – cyano-modified

Macherey-Nagel. Material: Glass plate with cyano-modied nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.20	**4554.1**	25 unit(s)	374,10
10 x 20	0.20	**4569.1**	25 unit(s)	569,75

HPTLC PlatesALUGRAM® Nano-SIL CN / UV_{254} – cyano-modified

Macherey-Nagel. Material: Aluminium sheet with cyano-modied nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
4 x 8	0.15	**4598.1**	50 unit(s)	210,70

TLC Plates – dimethyl-modified

Silanized silica 60 with dimethylmodification
Carbon content 4 %

- Specific surface: ~500 m^2/g
- Mean pore size: 60 Å
- Specific pore volume: 0,75 ml/g
- Particle size: 5–17 µm
- pH stability: 2–10

Order of polarity:
silica > DIOL > NH_2 > CN > **RP-2** > RP-18 W

Recommended application: active plant constituents, steroids

TLC Plates RP-2 / UV_{254} – dimethyl-modified

Macherey-Nagel. Material: Glass plate with dimethyl-modiefied silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
10 x 10	0.25	**3496.1**	25 unit(s)	188,15
10 x 20	0.25	**3498.1**	50 unit(s)	401,00
20 x 20	0.25	**3499.1**	25 unit(s)	296,70

TLC Plates ALUGRAM® RP-2 / UV_{254} – dimethyl-modified

Macherey-Nagel. Material: Aluminium sheet with dimethyl-modiefied silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
4 x 8	0.15	**3590.1**	50 unit(s)	109,65
20 x 20	0.15	**3591.1**	25 unit(s)	278,45

HPTLC Plates – octadecyl-modified

Reversed Phase (RP) plates
Carbon content 7.5 %
Partial octadecyl (C_{18}) modification

Order of polarity:
silica > DIOL > NH_2 > CN > RP-2 > **RP-18 W**

Wettable with water

HPTLC Plates RP-18 W / UV_{254} – octadecyl-modified

Macherey-Nagel. Material: Glass plate with octadecyl-modified nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.25	**CP23.1**	50 unit(s)	355,85
10 x 10	0.25	**3380.1**	25 unit(s)	269,85
10 x 20	0.25	**3383.1**	50 unit(s)	634,25
20 x 20	0.25	**3399.1**	25 unit(s)	496,65
20 x 20	1.00	**1886.1**	15 unit(s)	645,00

HPTLC Plates ALUGRAM® RP-18 W / UV_{254} – octadecyl-modified

Macherey-Nagel. Material: Aluminium sheet with octadecyl-modified nano silica gel 60, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
4 x 8	0.15	**CP24.1**	50 unit(s)	130,10
5 x 10	0.15	**3434.1**	50 unit(s)	155,90

TLC Plates with Aluminium Oxide

Aluminium oxide (ALOX)

- Specific surface: approx. 200 m^2/g
- Indicator: manganese-activated zinc silicate
- Mean pore width: 60 Å
- Inert organic binder

Tip: We recommend to activate aluminium oxide layers before use by heating at 120 °C for10 minutes.

TLC Plates ALUGRAM® ALOX N / UV_{254}

Macherey-Nagel. Material: Aluminium sheet with aluminium oxide, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
5 x 20	0.2	**N738.1**	50 unit(s)	100,45
20 x 20	0.2	**N739.1**	25 unit(s)	150,50

TLC Plates POLYGRAM® ALOX N / UV_{254}

Macherey-Nagel. Material: Polyester sheet with aluminium oxide, with fluorescence indicator.

Plate format (cm)	Layer thickness (mm)	Art. No.	Pack Qty.	€
4 x 8	0.2	**0817.1**	50 unit(s)	43,25

20 x 20	0.1	**1333.1**	25 unit(s)	163,40

Silica Gel 60 for TLC

Silica gels are the most important base material for thin layer chromatography. We therefore offer a range of specially selected silica gels 60 for preparing your own TLC plates. Our programme ranges from G-types (with gypsum) to a P-type (for preparative applications).

Properties:

- Spec. surface: ~400–500 m^2/g
- Mean pore diameter: 60 Å
- Pore volume: ~0,8 ml/g
- Particle size: 0-20 µm or 0–40 µm (preparative)
- Loss on drying: <9 %
- pH-value (5 % suspension): ~7

Product name	Purity	Art. No.	Pack Qty.	€
Silica gel 60 G	for TLC, with gypsum	**CN44.3**	250 g	50,00
		CN44.1	500 g	89,15
		CN44.2	1 kg	165,05
Silica gel 60 N	for TLC, contains no binder	**CN46.1**	500 g	94,10
		CN46.2	1 kg	162,90
Silica gel 60 G/F_{254}	for TLC, with gypsum	**CN45.3**	250 g	44,00
		CN45.1	500 g	83,35
		CN45.2	1 kg	152,15
Silica gel 60 P/F_{254}	for preparative TLC	**CN47.3**	250 g	51,10
		CN47.1	500 g	91,95
		CN47.2	1 kg	162,90

For additional product data and safety information, see chapter Chemicals A–Z.

Coating of TLC Plates with Silica Gel G:

Suspend 25 g Silica Gel G in 50 ml distilled water under frequent agitation. The fluid suspension will harden after a short time, due to the amount of gypsum, and can immediately be applied to a glass plate that is free of grease.

The plates should be rested for about 10 minutes until the surface is completely dim. Afterwards, preferably after predrying the plates exposed to air over night, the plates are dried (activated) for 30 minutes at 105–110 °C in a drying cabinet.

Until usage the plates should be stored in a desiccator above a desiccant like Silica Gel Orange (Art. No. P077).

Solvents for TLC
ROTISOLV® UV/IR-Grade Solvents

for Chromatography and Spectroscopy

ROTISOLV® UV/IR-Grade solvents are specially adapted for spectrophotometric processes and other chromatographic applications which require high spectroscopic purity.

Properties:

- High chemical purity
- Spectroscopically tested for UV and IR
- High UV-permeability
- Low fluorescence

Product name	Max. permeability at	Art. No.	Pack Qty.	€

Developing chambers for TLC

Technical specifications:

Art. No.	3134.1	3133.1
Suitable for	up to 2 plates up to 10 x 10 cm plate size	up to 5 plates up to 20 x 20 cm plate size
W x D x H, external	146 x 91 x 127 mm	235 x 116 x 220 mm
W x D x H, interior	124 x 83 x 110 mm	207 x 84.4 x 207.7 mm

Developing chamber for TLC

Macherey-Nagel.

Simultaneous developing chamber made of glass.

Delivery incl. glass cabinet with lid

Pic.	Usable for	Art. No.	Pack Qty.	€
(1)	up to 2 plates up to 10 x 10 cm plate size	**3134.1**	1 unit(s)	181,70
(2)	up to 5 plates up to 20 x 20 cm plate size	**3133.1**	1 unit(s)	385,95

TLC separation chamber

For immersing pre-treated TLC ready-to-use foils (size 8 x 4 cm) in the solvent. Cylindrical glass beaker with loose-fitting glass lid. Inner height 100 mm, Ø 60 mm.

A 121 °C

TLC separation chamber

TLC Spray Solutions

Carl ROTH's ready-to-use spray solutions make thin-layer chromatography operations considerably easier.
For these ready-to-use spray solutions the staining/derivative reagent was dissolved in ethanol, 2-propanol or in water.

ready-to-use

Product name	General application	Art. No.	Pack Qty.	€
Aniline phthalate spray solution	Ready-to-use spray solution for detection of reducing sugars. 0,9 ml Anilin and 1,66 g phthalic acid dissolved in 100 ml ethanol / 2-propanol (1/1 v/v).	**CP35.1**	100 ml	42,90
Bromocresol green spray solution	Ready-to-use spray solution for organic acids.	**1H05.1**	100 ml	40,10
2',7'-Dichloro-fluorescein spray solution	Ready-to-use spray solution for detection of Lipids (saturated, unsaturated). 0,2 g 2',7'-Dichloro-fluorescein dissolved in 100 ml 2-propanol.	**CP36.1**	100 ml	42,90
4-(Dimethylamino) benzaldehyde spray solution	Ready-to-use spray solution for detection of terpenes, sugars and steroids. 0,5 g 4-(Dimethyl-amino)-benzaldehyde dissolved in 100 ml 2-propanol.	**CP38.1**	100 ml	42,90
Dragendorff-Munier spray solution	Ready-to-use spray solution for detection of nitrogen compounds and alkaloids. 1 % basic Bismuth nitrate, 16,5 % tartaric acid, 20 % potassium iodide dissolved in water. Occurring sediment is tartaric acid contained in excess.	**CP33.1**	100 ml	42,90
Iron(III) chloride spray solution	Ready-to-use spray solution for detection of acetylsalicylic acid and paracetamol. 2 g Iron(III) chloride dissolved in 100 ml water.	**CP34.1**	100 ml	42,90
Molybdatophosphoric acid spray solution	Ready-to-use spray solution for detection of reducing compound lipids, fatty acids and steroids. 4 g Molybdatophos-phoric acid dissolved in 100 ml ethanol.	**CP31.1**	100 ml	42,90
Ninhydrin spray solution	Ready-to-use spray solution for detection of amino acids, amines and amino sugars. 0,5 g Ninhydrin dissolved in 100 ml ethanol.	**CP30.1**	100 ml	42,90
Potassium hexacyanoferrate(III) spray solution	In combination with iron(III) chloride for visualisation of e.g., acetylsalicylic acid and paracetamol.	**1H06.1**	100 ml	40,10
Rhodamine B spray solution	Ready-to-use spray solution for detection of lipids. 0,1 g Rhodamine B dissolved in 100 ml ethanol.	**CP37.1**	100 ml	42,90
Rubeanic acid spray solution	Ready-to-use spray solution for detection of heavy metal ions. 0,2 g Rubeanic acid dissolved in 100 ml ethanol	**CP32.1**	100 ml	42,90
Spray solution for xanthine visualisation (caffeine, theophylline, theobromine)	Ready-to-use spray solution for detection of purine alkaloids (caffeine, theophylline, theobromine). Solution of tartaric acid, iodine and ferric chloride in acetone.	**1H07.1**	100 ml	40,10

For additional product data and safety information, see chapter Chemicals A–Z.

Ammonium molybdate spray reagent:

For detecting hydroxycarboxylic acids.
Mix 2 ml **ammonium molybdate solution** 25 % +
2 ml ascorbic acid 10 % + 2 ml sulphuric acid 29,5 % and
add 4 ml H_2O.

Dragendorff's spray reagent:

For detecting tertiary amines and nitrogen heterocycles.
Mix 0,85 g **bismuth(III) nitrate basic** + 40 ml H_2O +
10 ml acetic acid with 20 ml KI-solution (40 %).

Bromcresol green spray reagent:

For detecting hydroxycarboxylic acids.
Dilute 25 mg **bromcresol green** + 0,36 ml 0,1 N NaOH +
10 ml ethanol 96 % to 50 ml with H_2O.

Ehrlich's spray reagent:

For detecting sulphonamides and primary aromatic amines.
Mix 0,5 g **4-(dimethylamino)-benzaldehyde** +
25 ml hydrochloric acid 36 % + 25 ml ethanol 96 %.

Natural substance reagent A as a spray reagent:

According to Wagner natural substance A is an excellent reagent for fluorometry to quantitate thin layer chomatogrammes.

Application:
Natural substance-polyethylene glycol reagent (NST/PEG). Spray a 1 % methanol solution of natural substance reagent A and a 5 % ethanol PEG 4000 solution, one after the other onto the TLC plate (approx. 10 ml and 8 ml). Intensive fluorescent colours will appear immediately or after 15 min in UV-365 nm. Adding PEG will lead to an increase in detection sensitivity (from 10 µg to 2,5 µg). The fluorescence behaviour depends on the constitution. The reagent must be freshly prepared before use (1 % in methanol). Spray under the fume hood!

Ninhydrin spray reagent:

For detecting amino acids and primary aliphatic amines.

0,15 g **ninhydrin** + 47,5 ml 2-propanol +
2,5 ml acetic acid 96 %.

Detection Reagents for TLC

Staining and derivatisation reagents for preparing your own spray solutions.
Application examples:
tracing organic acids, lipids, steroids, terpenes, flavonoids, amino acids, peptides.

Spray unit

Versatile spray unit with gas cartridge for spraying reagents and other aqueous liquids. Constant spray pressure approx. 4.4 bar. Eco-friendly propellant mixture of dimethyl ether, propane and isobutane. Sufficient for approx. 500 ml liquid.
Easy to clean: Unscrew the cartridge, immerse the riser in a container with cleaning liquid and spray until the spray jet contains no residue.
Propellants: Dimethyl ether, isobutane, propane.

Delivery incl. propellant cartridge (55 g or 94 ml), glass reservoir bottle 170 ml, suction tube and screw cap.

Paper Chromatography

Paper chromatography (PC) is the oldest chromatographic technique. Like other chromatographic applications, separation is based upon the partition of the material mixture, which is to be separated, between two immiscible phases.
While the chromatographic paper is, strictly speaking, only the carrier for the liquid mobile phase, the properties of the paper do, in fact, have considerable influence on the quality of the separation.
The most important characteristics of chromatographic papers are the **weight (g/m²),** the **thickness (mm)** and the **migration distance**.
When specifying the migration distance, it is common practice in the paper industry to apply the Klemm method. This method indicates the extent of dampness of a 15 cm wide paper strip (dipped in 20 °C dist. water) after 10 minutes. You will, however, frequently find the migration distance of chromatographic paper specified in mm/30 min.

57 x 46	**7602.1**	25 sheet	420,35

Application instructions:

Chromatography paper and cardboard must always be handled carefully. Your fingers should not touch the paper as the separation process will be disrupted by skin excretion, such as salt, grease and amino acids. Please avoid folding or creasing the paper as this will impair the capillary action.

Ion Chromatography

ROTI®Star Standards for IC

Carl ROTH has an extensive range of products which meets the highest standards of quality in the field of ion standards. The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by IC. All solutions are certified and can be traced to NIST or BAM standard reference solutions. Solutions are produced according to **ISO 17034** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.

Ion Standards for IC

Each standard solution is made of high-purity starting materials, and its content is determined gravimetrically and by ion chromatography. They come with certificates of analysis and an ion chromatogram.

- Single and multi-element-standards
- Anion and cation multi-element-standards
- Container sizes: 100 ml and 500 ml

ready-to-use

NUCLEODUR® Columns for HPLC

NUCLEODUR® as a state-of-the-art silica is the ideal base material for modern HPLC phases. We offer two phases **NUCLEODUR® Gravity** which is ideal for sophisticated analytical separations and **NUCLEODUR® ec** suitable for routine HPLC analysis.

HPLC Columns NUCLEODUR® "Gravity"

The ideal phase for overall sophisticated analytical separations

This high density phase with its endcapping suppresses any unwanted polar interactions between the silica surface and the sample, which makes "Gravity" particularly suitable for the separation of basic and other ionizable analytes.

Properties:

- Suitable for LC/MS and HPLC at pH extremes (pH 1–11)
- Ideal for method development
- Superior base deactivation
- Multi-Endcapping

Recommended application(s):

- In general, compounds with ionisable functional groups such as basic pharmaceuticals and pesticides e.g. analgesics, anti-inflammatories, antidepressants, herbicides, phytopharmaceuticals, immunosuppressants.
- USP L1 (C_{18}) · USP L7 (C_8)

HPLC column NUCLEODUR® C_{18} Gravity

Properties:

- Octadecyl phase, multi-endcapped
- Carbon content: 18.0 %
- Pore size: 110 Å
- pH stability: 1–11
- Eluent on column: acetonitrile/water

Applications:
Pharmaceuticals, e.g. analgesics, antiinflammatory drugs, antidepressants, herbicides, immunosuppressants, USP L1, suitable for LC-MS.

Similar phases:
Zorbax® Extend C_{18}, Synergi™ und Max RP, Phenomenex Luna® C_{18} (2), Waters Xterra® RP_{18} / MS C_{18}, Inertsil® ODS III, Purospher® RP-18, Star RP-18.

HPLC column NUCLEODUR® C_{18} Gravity 3 µm

5	250	4.6	**KK91.1**	1 unit(s)	752,50

HPLC column NUCLEODUR® C_8 Gravity

Reduced retention of non-polar compounds.

Properties:

- Octyl phase, multi-endcapped
- Carbon content: 11.0 %
- Pore size: 110 Å
- pH stability: 1–11
- Eluent on column: acetonitrile/water

Applications:
analgesics, antidepressants, antiinflammatory drugs, herbicides, immunosuppressants, pharmaceuticals, phytopharmaceuticals, USP L7, suitable for LC/MS.

Similar phases:
NUCLEOSIL® C_8 HD; Xterra® RP_8 / MS C_8; Luna® C_8; Zorbax® Eclipse XDB-C_8.

► For reference substances for the HPLC see page 489 ff.

HPLC Columns NUCLEODUR® "Pyramid"

The polar endcapping makes this C_{18} phase suitable for aqueous eluents and is also referred to as an "aqua column".

HPLC column NUCLEODUR® C_{18} Pyramid

Properties:

- Octadecyl phase with polar endcapping
- Carbon content: 14.0 %
- Pore size: 110 Å
- pH stability: 1–9
- Eluent on column: acetonitrile/water

Applications:
Basic pharmaceuticals, very polar compounds, organic acids, analgesics, complexing agents, nucleic acid bases, organic acids, penicillin antibiotics, water-soluble vitamins, USP L1, suitable for 100 % aqueous eluents, suitable for LC-MS.

Similar phases:
Aqua, Synergi® Hydro-RP; AQ; Atlantis® dC_{18}; Polaris® C18-A.

HPLC column NUCLEODUR® C_{18} Pyramid

Macherey-Nagel.

5	250	4	**1L7E.1**	1 unit(s)	709,50

The Egyptian pyramids were built near the Nile so that the stone blocks could be transported by water.

HPLC Columns NUCLEODUR® ec

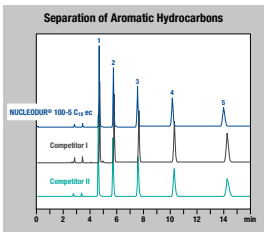
Non-polar phases for routine analysis

Standard RP phase (110 Å) for daily routine analysis and up-scaling to preparative HPLC. Also available wide-pore (300 Å) for separation of biomolecules in analytical columns.

Properties:

- Cost-effective and reliable
- Long-life columns
- For all standard routine applications in modern RP-chromatography

Recommended application(s):



- Pore size 100 Å:
  Basic, neutral and acidic pharmaceuticals, derivatised amino acids, pesticides, fat-soluble vitamins, aldehydes and ketones, phenolic compounds.
- Pore size 300 Å:
  Biological macromolecules, such as proteins or peptides.
- USP L1 (C_{18}) · USP L7 (C_8) · USP L26 (C_4)

HPLC column NUCLEODUR® C_{18} ec

The ideal phase for routine HPLC analysis.

Properties:

- Octadecyl phase, endcapped
- Carbon content: 17.5 %
- Pore size: 110 Å
- pH stability: 1–9
- Eluent on column: acetonitrile/water

Conditions:
Eluent: acetonitril/water (75/25, v/v); Flow: 1,3 ml/min; Temperature: 30 °C; Detection: UV, 254 nm
Legend:
1. Toluene, 2. Ethylbenzene, 3. Propylbenzene, 4. Butylbenzene, 5. Pentylbenzene

Similar phases:
For many applicatons the following phases can be replaced with identical or even better results: NUCLEOSIL® C_{18}, Spherisorb® ODS I und II, Hypersil® ODS, Waters Symmetry®C_{18}, Inertsil® ODS II, Kromasil® C_{18}, LiChrospher® RP_{18} und RP C_{18} ec.

5	250	4.6	**KK85.1**	1 unit(s)	464,40

HPLC column NUCLEODUR® C_8 ec

Standard RP phase for daily routine analysis and up-scaling for preparative HPLC.

C_8 has a lower retention of hydrophobic compounds compared to C_{18} (octadecyl silane, ODS).

Properties:

- Octyl phase, endcapped
- Carbon content: 10.5 %
- Pore size: 110 Å
- pH stability: 1–9
- Eluent on column: acetonitrile/water

Similar phases:
NUCLEOSIL® C_8 ec / C_8; Spherisorb® C_8; Symmetry® C_8; Hypersil® MOS; Kromasil® C_8; LiChrospher® RP_8.

HPLC column NUCLEODUR® 300-5 C_4 ec

Wide pore RP phase for daily routine analysis. The medium density butyl modification is based on high purity NUCLEODUR® silica gel and is often used for the separation of biomolecules.

Butyl (C_4) modifications have a lower retention for hydrophobic compounds compared to C_{18} (octadecyl silane, ODS) or C_8 (octyl, MOS) modifications.

Properties:

- Butyl phase, endcapped
- Carbon content: 2.5 %
- Pore size: 300 Å
- pH stability: 1–9
- Eluent on column: acetonitrile/water

Similar phases:
Jupiter® C_4; ACE® C_4.

Guard Columns Systems

HPLC Guard Columns (analytical)

For protection of your main HPLC column from contamination, it is recommended to use guard columns. These short columns are placed into a guard column holder. The guard column holder in combination with a guard column inside is installed between the injector and the HPLC column. This installation prevents chemical impurities to reach the main column. Because a contamination could form an irreversible bond with the column packing material (stationary phase) and this can result in shorter column life. If you want to prolong the lifetime of your main column, then these short columns can help you.

Column length = 4 mm

Column Protection System

Innovative and universal screw-on guard column holder system
Suitable for all analytical HPLC columns with 1/16″ fittings

- Ideal protection for your analytical main column → significant increase in column lifetime
- Minimised void volume → suitable also for ultra fast HPLC
- Special ferrules → pressure stability up to 1300 bar (18850 psi)
- Visual contamination check → in-time changing of the guard column
- Guard column length 4 mm, ID 2 mm (for main columns with 2 mm ID) or ID 3 mm (for main columns with 3, 4 and 4,6 mm ID)
- UNIVERSAL RP guard columns suitable for all HPLC columns under RP conditions

Contents of the column protection system:

- Cartridge holder (1 piece)
- Capillaries (2 pieces)
- Ferrules (3 pieces)
- Wrenches (2 pieces)
- Manual

Ion Pair Reagents

Ion pair reagents are strongly hydrophobic ions which form neutral ion pairs with oppositely charched sample molecules. This way, the simultaneous separation of charged and non-charged molecules is possible.
By adding ion pair reagents to the sample solution in RP-HPLC, strong bases are "masked" and retard in neutral form on RP surfaces.

Properties:

- High purity
- High UV-permeability
- Broad range of products
- Excellent price/performance ratio

Product name	Purity	Art. No.	Pack Qty.	€

ROTISOLV® Ultra LC-MS Solvents

Short analysis times in ultrafast HPLC as well as systems coupled to a mass spectrometer require solvents which offer utmost reliability, sensitivity and reproducibility. Our ROTISOLV® Ultra LC-MS solvents are specially suited for meeting these demands and have undergone extremely intensive production and quality controls.

Properties:

- Filtered through 0.1 µm membrane
- Highest purity (≥99.98 %)
- Filled under inert gas
- High UV transmittance
- Low fluorescence
- Tested for LC-MS suitability
- Evaporation residue of max. 1 ppm
- Metallic contamination max. 100 ppb

Product name	Purity	Pack.	Art. No.	Pack Qty.	€

Safety data sheets
can be found on the Internet next to the product description.

ROTISOLV® LC-MS-Grade Solvents

Modern analysis methods such as LC-MS call for a special solvent quality which has the required purity and which has been tested under application-oriented conditions. Very high purity and very low metal concentrations are features of these products which allow exact interpretations of the mass spectra.

Properties:

- Highest purity (≥99,95 %)
- High UV transmittance
- Low fluorescence
- Excellent gradient baseline
- Trace elements: ≤0.05 ppm per element
- Tested for LC-MS suitability
- Particle filtration (0.2 µm membrane)
- Filled under inert gas

Product name	Purity	Pack.	Art. No.	Pack Qty.	€
Acetic acid ethyl ester	≥99,9 %, LC-MS Grade	glass	**AE69.1**	1 l	67,65
			AE69.2	2.5 l	145,15

ROTISOLV® LC-MS-Eluent Mixtures

Properties:

- *Ready-to-use* solvent blends for easy handling
- High chemical purity of the used raw material: HPLC solvents (≥99.9 %) and acids (≥99.9 %)
- High accuracy of the ratio of ingredients
- High UV-permeability
- Trace elements: ≤0.05 ppm per element
- LC-MS suitability tested
- Filtered through 0.2 µm membrane
- Bottled under inert gas

ready-to-use

Sorbents for Column Chromatography

We offer a wide range of sorbents for conventional column chromatography. A variety of different particle sizes and modifications means that the right filling material is available for all your separation applications.

Silica Gels

Silica gels are the most important sorbents in the purification and separation processes used in column chromatography. Our extensive range of silica gels with various different pore and particle sizes means that we always have the right material for any separation procedure. In addition to standard 60 Å silica gel, our range includes silica gels with pore sizes between 150 Å and 4500 Å, as well 22 Å and 35 Å for separating particularly small molecules. A selection of modified silica gel 60 grades completes the range.

Advantages:

- Extensive range
- Stringent quality control of the starting materials and the end products
- High purity; optimised to meet the needs of chromatography applications
- Large surface area for a high load-bearing capacity
- Tight particle size distribution for optimal efficiency and low pressure variations

3 Steps to the appropriate silica gel

Step 1: The pore size is selected based on the molar mass of the sample.

Molar mass (g/mol)	Pore size (Å)
<350	35
<800	60
<15000	150
<100000	250
<250000	500
<250000	1000–4500

Step 2: The grain size is selected in relation to the pressure in the system.

Pressure (bar)	Grain size (mm)
65	0.01
20	0.016–0.024
15	0.02–0.045
5	0.04–0.063
2	0.07–0.2
<1	>0.2

Step 3: The surface functionality is adapted to the solubility of the sample and the required degree of separation.
Polarity series: Silica gel > Diol > Amino > Cyano > C_{18}

Mobile phase	Stationary phase
Nonpolar to medium polar solvents (normal phase)	Silica gel
Nonpolar to polar solvents (normal phase, reversed phase)	Diol
	Amino
	Cyano
Polar solvents (reversed phase)	C_{18}

Aluminium Oxide

Our range of aluminium oxides (neutral – alkaline – acidic) for conventional column chromatography most certainly includes the right one for you.
All aluminium oxides are available in activity grade I. Activity grades II to V can be set up by adding water:
Activity grade I - 0 % water
Activity grade II - 3 % water
Activity grade III - 6 % water
Activity grade IV - 10 % water
Activity grade V - 15 % water

Product name	Art. No.	Pack Qty.	€
Aluminium oxide 90 neutral	**P092.1**	500 g	85,90
	P092.2	1 kg	149,45
	P092.3	2.5 kg	317,15
Aluminium oxide 90 basic	**X908.1**	500 g	85,90
	X908.2	1 kg	149,45
	X908.3	2.5 kg	317,15
Aluminium oxide 90 acidic	**X909.1**	500 g	85,90
	X909.2	1 kg	149,45
	X909.3	2.5 kg	317,15

For additional product data and safety information, see chapter Chemicals A–Z.

Cellulose

Cellulose powders are used mainly for qualitative and preparative separation and purification in column chromatography.

Cellulose
for column chromatography

Celite® - Silicate Basis

Prepared and standardized Celite® is used as a filtering aid or as adsobent in column chromatography.
Composition:
approx. 90 % SiO_2, 2–5 % Al_2O_3, 1–4 % Fe_2O_3 and various other oxides in a low concentration, that is why the Celite® may be slightly tinted.

The complete Celite® range at a glance

Polyamide

Polyamide 6 (ε-aminopolycaprolactam) is used in conventional column chromatography for separating, purifying and isolating samples.

Polyamide
for column chromatography

Particle size 0,05-0,16 mm. Excellent for purification of plant extracts.

Flash Chromatography

Flash chromatography is, on account of its superior properties, replacing column chromatography in many laboratories for chemical synthesis, pharmacokinetics and combinatorial chemistry. Flash chromatography can be used to clean samples inexpensively and quickly on a preparative scale up to approximately 100 g. A key factor here is the automation capacity of flash chromatography and the reduced solvent consumption compared to column chromatography.
Thin-layer chromatography is often used for the development of a selective and reproducible method. This way, it is possible to determine the optimal combination of various eluents and sorbents within a short space of time. The quality of the Carl ROTH product range is reflected in the fact that our TLC plates and foils are coated with the same basic silica gel as that used in CHROMABOND® flash columns. This enables the developed method to be perfectly applied to flash chromatography.

CHROMABOND® Flash RS SiOH Cartridges

ready-to-use

CHROMABOND® Flash RS SiOH are known for fast and economical chromatographic purifications in industry. The ready-to-use Flash columns (cartridges) are packed with highly pure silica (acid washed).

- **Increased analytical safety:** Organic solvent restistant, low bleed cartridges, thick column walls, one piece body, sophisticated length-to-diameter ratio for high plate numbers and excellent separation efficiencies. Distribution of eluent stream via highly porous frits.
- **High pressure stability:** Up to 21 bar for cartridges <40 bar, up to 15 bar for 80 g and 120 g cartridges, up to 12 bar for cartridges >200 g
- **High quality standard:** All flash cartridges and adsorbents undergo comprehensive during- and after-production quality assurance measures to ensure that the products conform to the specification.
- **Adsorbent weights:** 15 g to 330 g.

CHROMABOND® Flash RS SiOH Cartridges

CHROMABOND Flash RS SiOH are known for fast and economical chromatographic purifications in industry. The ready-to-use Flash columns (cartridges) are packed with highly pure silica (acid washed).

CHROMABOND® Flash RS SiOH Cartridges

Macherey-Nagel.

- Female Luer lock inlet and male Luer outlet
- Adsorbent: standard silica, unmodified (SiOH)
- Particle size: 40–63 µm, specific surface 500 m²/g
- pH stability: 2–8

CHROMABOND® Flash DL Empty Columns

CHROMABOND® Flash DL empty columns can be used as solid injection system or for self-filling (direct load) and packing of flash cartridges. Column connection – female Luer lock inlet and male Luer lock outlet. Each cartridge comes with 3 filter elements – one already inserted, two more filters aside.

Delivery incl. Empty flash columns with 3 filter elements each.

CHROMABOND® Flash DL Empty Columns

SPE (Solid Phase Extraction)

A fast, effective and inexpensive system for sample preparation. SPE columns enable samples to be processed for HPLC, GC, TLC, UV/IR spectroscopy, etc.

Applications:

- Food analysis
- Environmental analysis
- Organic chemistry
- Pharmaceutical analysis
- Biochemical analysis

All **CHROMABOND® columns** are made of polypropylene (PP) with very low content of extractable substances (plasticisers, stabilisers, ...) and thus allow blank-free results when using all common solvents.
The high quality CHROMABOND® sorbents are confined by chemically very inert polyethylene filter elements.
Various sizes from 1, 3, 6 to 150 ml.
Glass columns with chemically very inert glass fibre filter elements (nominal pore size 1 µm).
Two different sizes: 3 and 6 ml.
Exclude any influence of the column material (e. g. plasticiser).

CHROMAFIX® cartridges offer an alternative way of handling using positive pressure by syringes or peristaltic pumps..
Especially suited for convenient solid phase extraction of small sample volumes. Female Luer fitting at the inlet, male Luer tip as exit.

Three different sizes with different filling quantities:
S = small (0.4 ml), M = medium (0.8 ml), L = large (1.8 ml)

The **CHROMABOND® HR-*Xpert* concept** comprises 5 polymer-based RP and mixed-mode ion exchange phases. Depending on the character of the analytes it offers suitable adsorbents and optimal methods for sample preparation, cleaning and concentration.

State-of-the-art spherical polymer:
- Particle size: 85 µm
- Broad spectrum of application with special suitability for enrichment of pharmaceuticals from biological matrices
- Ideal flow properties due to low content of particulate matter

Optimized pore structure and high specific surface:
- High loadability and outstanding elution properties in RP as well as mixed-mode
- Low solvent consumption
- Rapid, economical analyses

High purity adsorber material:
- Allows high reproducibility with extremely low blind values
- Reliable analyses at ultra trace level
- No method adaptation for new batches necessary

HR-Xpert Phase	Properties	Application areas
CHROMABOND® HR-X	hydrophobic PS/DVB copolymer	neutral and polar active ingredients and analytes such as pesticides, drugs, phenols, PAHs, PCBs
CHROMABOND® HR-XC	strong acidic mixed-mode benzenesulfonic acid cation exchanger	basic active ingredients and analytes such as amines (melamine), . . . bases with pKa 2–10
CHROMABOND® HR-XA	strong basic mixed-mode quaternary ammonium anion exchanger	acidic active ingredients and analytes such as herbicides, . . . acids with pKa 2–8
CHROMABOND® HR-XCW	weak acidic mixed-mode carboxylic acid cation exchanger	strongly basic active ingredients and analytes such as quaternary amines, . . . bases with pKa > 10
CHROMABOND® HR-XAW	weak basic mixed-mode secondary/tertiary ammonium anion exchanger

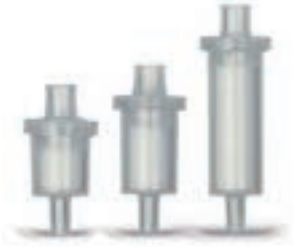
RP Phases

SPE polypropylene column CHROMABOND® HR-X

Macherey-Nagel. Material: PP columns with PE filter elements.



Spherical, hydrophobic polystyrene/divinylbenzene copolymer

Especially for the enrichment of pharmaceuticals and active ingredients.

Please note: high-purity material with homogenous surface and optimised pore structure – due to optimised production process – enables lowest blanks, outstanding recovery rates and highest reproducibility.

Similar phases: Supelclean™ ENVI-Chrom P, Strata™-X, Oasis® HLB, Bond Elut Nexus

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€

SPE polypropylene column CHROMABOND® Easy

Macherey-Nagel. Material: PP columns with PE filter elements.

Polar modified polystyrene/divinylbenzene copolymer with a week ion exchanger.

Please note: Due to its bifunctional modification it is much more hydrophilic than conventional polystyrene/divinylbenzene polymers and thus easily wettable with water.

Similar phases: Strata™-X, Oasis® HLB, Sep-Pak® Porapak RDX, Nexus, Bond Elut® PPL, Styre Screen® DVB, Bakerbond™ H_2O philic DVB, Isolute® ENV+

SPE Cartridges CHROMAFIX® C18

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K8Y.1**	50 unit(s)	169,85
Medium	0.8	10 × 5 units	**1K90.1**	50 unit(s)	203,20
Large	1.8	10 × 5 units	**1K91.1**	50 unit(s)	270,90

SPE polypropylene column CHROMABOND® C18 Hydra

Macherey-Nagel. Material: PP columns with PE filter elements.

Octadecyl modified silica gel, not endcapped

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
3	200	1 × 50 units	**N751.1**	50 unit(s)	156,95
3	500	1 × 50 units	**N752.1**	50 unit(s)	174,15
6	500	1 × 30 units	**N753.1**	30 unit(s)	117,20
6	1000	1 × 30 units	**N754.1**	30 unit(s)	151,60

SPE Cartridges CHROMAFIX® C8

Macherey-Nagel.

Silica gel based octyl phase, not endcapped similar to C_{18}. Secondary interactions with polar compounds are more pronounced due to shorter alkyl chains.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Medium	0.8	10 × 5 units	**1K97.1**	50 unit(s)	203,20

SPE Cartridges CHROMAFIX® C4

Macherey-Nagel.

Silica gel based butyl phase, not endcapped similar to the C_8. Secondary interactions with polar compounds are more pronounced due to shorter alkyl chains. For compounds that are too strongly retarded at C_{18} or C_8.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Medium	0.8	10 × 5 units	**1K7L.1**	50 unit(s)	203,20

Normal Phases

SPE polypropylene column CHROMABOND® SiOH

Macherey-Nagel. Material: PP columns with PE filter elements.

Unmodified, slightly acidic silica gel

Please note: Extremely polar! Adsorbs air humidity. Should be kept well closed and if necessary dried prior to use. Due to its high affinity for polar compounds it should not be conditioned with polar (e.g. methanol) or water containing solvents.

Similar phases: Strata® Si-1, Bond Elut silica, Discovery® DSC-Si, Supelclean™ LC-Si, CLEAN-UP® silica, Bakerbond™ silica gel, Isolute® silica, LiChrolut® Si

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
1	100	1 × 100 units	**N755.1**	100 unit(s)	175,25
3	200	1 × 50 units	**N756.1**	50 unit(s)	147,30
3	500	1 × 50 units	**N757.1**	50 unit(s)	160,20
3	500	5 × 50 units	**N757.2**	250 unit(s)	650,40
6	500	1 × 30 units	**N758.1**	30 unit(s)	109,65
6	1000	1 × 30 units	**N759.1**	30 unit(s)	123,65
6	1000	5 × 50 units	**N759.2**	250 unit(s)	800,90

SPE Cartridges CHROMAFIX® SiOH

Macherey-Nagel.

Unmodified, slightly acidic silica gel

Please note: Extremely polar! Adsorbs air humidity. Should be kept well closed and if necessary dried prior to use. Due to its high affinity for polar compounds it should not be conditioned with polar (e.g. methanol) or water containing solvents.

Similar phases: Strata® Si-1, Bond Elut silica, Discovery® DSC-Si, Supelclean™ LC-Si, CLEAN-UP® silica, Bakerbond™ silica gel, Isolute® silica, LiChrolut® Si

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Large	1.8	10 × 5 units	**1HP4.1**	50 unit(s)	207,50

SPE polypropylene column CHROMABOND® NH_2

Macherey-Nagel. Material: PP columns with PE filter elements.

Aminopropyl modified silica gel

Polar weak anion exchanger

Carbon content 3.5 %

- Pore size: 60 Å
- Particle size: 45 µm
- Spec. surface: 500 m^2/g
- pH stability: 2–8

Similar phases: Strata® NH_2, Sep-Pak® NH_2, Bond Elut NH_2, Discovery® DSC-NH_2, Supelclean™ LC-NH_2, CLEAN-UP® aminopropyl, Bakerbond™ amino, Isolute® NH_2, LiChrolut® NH_2

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
1	100	1 × 100 units	**1340.1**	100 unit(s)	255,85

6	1000	5 × 50 units	**1291.2**	250 unit(s)	800,90

SPE Cartridges CHROMAFIX® Florisil

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Large	1.8	10 × 5 units	**1HXH.1**	50 unit(s)	207,50

SPE Cartridges CHROMAFIX® PA

Macherey-Nagel.

For sample preparation of flavonoids and PAHs.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K92.1**	50 unit(s)	179,55
Large	1.8	10 × 5 units	**1K93.1**	50 unit(s)	279,50

Ion Exchangers

SPE polypropylene column CHROMABOND® SA (SCX)

Macherey-Nagel. Material: PP columns with PE filter elements.

Benzenesulphonic acid modified silica gel, strong acidic cation exchanger (SCX)

Please note: Adsorbent with hydrophobic and π-π-interactions (benzene ring); Ion exchange of organic compounds from aqueous matrix; Elution of interesting compounds with solvent systemes, which compensate the ionic and nonpolar interactions, e.g. methanolic HCl.

Similar phases: Strata® SCX, Bond Elut SCX, Discovery® DSC-SCX, Supelclean™ LC-SCX, CLEAN-UP® Benzenesulfonic Acid, Bakerbond™ Aromatic Sulfonic Acid, Isolute® SCX, LiChrolut® SCX

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
1	100	1 × 100 units	**1293.1**	100 unit(s)	255,85
3	500	1 × 50 units	**1295.1**	50 unit(s)	219,30
3	500	5 × 50 units	**1295.2**	250 unit(s)	876,15
6	1000	1 × 30 units	**1297.1**	30 unit(s)	213,95

SPE Cartridges CHROMAFIX® SA (SCX)

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K84.1**	50 unit(s)	179,55
Medium	0.8	10 × 5 units	**1K85.1**	50 unit(s)	210,70
Large	1.8	10 × 5 units	**1K86.1**	50 unit(s)	279,50

SPE polypropylene column CHROMABOND® SB (SAX)

Macherey-Nagel. Material: PP columns with PE filter elements.

Quat. ammonium modified silica gel, strong basic anion exchanger (SAX)

Please note: Not suitable for very strong anions such as sulphonic acids because they are difficult to elute.

Similar phases: Strata® SAX, Sep-Pak® SAX, Bond Elut SAX, Discovery® DSC-SAX, Supelclean™ LC-SAX, CLEAN-UP® Quaternary Amine, Bakerbond™ Quarternary Amine, Isolute® SAX, LiChrolut® SAX

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
1	100	1 × 100 units	**1346.1**	100 unit(s)	255,85
3	200	1 × 50 units	**1350.1**	50 unit(s)	196,75
3	500	1 × 50 units	**1351.1**	50 unit(s)	219,30
3	500	5 × 50 units	**1351.2**	250 unit(s)	876,15

6	1000	1 × 30 units	**1353.1**	30 unit(s)	213,95

SPE Cartridges CHROMAFIX® SB (SAX)

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Medium	0.8	10 × 5 units	**1K76.1**	50 unit(s)	210,70
Large	1.8	10 × 5 units	**1K77.1**	50 unit(s)	279,50

SPE polypropylene column CHROMABOND® HR-XC

Macherey-Nagel. Material: PP columns with PE filter elements.

Benzenesulphonic acid modified spherical polystyrene/divinylbenzene copolymer, cation exchanger (mixed mode)

Especially for the enrichment of basic analytes (pK_a 2–10).

Please note: high-purity material with homogenous surface and optimised pore structure – due to optimised production process – enables lowest blanks, outstanding recovery rates and highest reproducibility.

Similar phases: Oasis® MCX, Strata™ X-C, Styre Screen® DBX, HyperSep™ Retain CX

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
3	60	1 × 30 units	**3090.1**	30 unit(s)	112,90
3	200	1 × 30 units	**3092.1**	30 unit(s)	126,85
6	500	1 × 30 units	**3095.1**	30 unit(s)	264,45

SPE Cartridges CHROMAFIX® HR-XC

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K81.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K82.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K83.1**	50 unit(s)	332,20

SPE polypropylene column CHROMABOND® HR-XA

Macherey-Nagel. Material: PP columns with PE filter elements.

Quat. ammonium modified spherical polystyrene/divinylbenzene copolymer, strong anion exchanger (mixed mode)

Especially for the enrichment of acidic analytes (pK_a 2–8).

Please note: high-purity material with homogenous surface and optimised pore structure – due to optimised production process – enables lowest blanks, outstanding recovery rates and highest reproducibility.

Similar phases: Oasis® MAX, HyperSep™ Retain AX, StyreScreen® QAX, Strata™-X-A

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
3	60	1 × 30 units	**3069.1**	30 unit(s)	112,90
3	200	1 × 30 units	**3071.1**	30 unit(s)	126,85
6	500	1 × 30 units	**3072.1**	30 unit(s)	264,45

SPE Cartridges CHROMAFIX® HR-XA

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K7N.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K7P.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K7T.1**	50 unit(s)	332,20

SPE polypropylene column CHROMABOND® HR-XCW

Macherey-Nagel. Material: PP columns with PE filter elements.

Carboxylic acid modified spherical polystyrene/divinylbenzene copolymer, weak acidic cation exchanger (mixed mode)

Especially for the enrichment of strong basic analytes (pK_a >10).

Please note: high-purity material with homogenous surface and optimised pore structure – due to optimised production process – enables lowest blanks, outstanding recovery rates and highest reproducibility.

Similar phases: Oasis® WCX, Strata™-X-CW

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
3	60	1 × 30 units	**3917.1**	30 unit(s)	112,90
3	200	1 × 30 units	**3919.1**	30 unit(s)	126,85
3	500	1 × 30 units	**3924.1**	30 unit(s)	186,00

SPE Cartridges CHROMAFIX® HR-XCW

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K8P.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K8T.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K8X.1**	50 unit(s)	332,20

SPE polypropylene column CHROMABOND® HR-XAW

Macherey-Nagel. Material: PP columns with PE filter elements.

Sec./tert. ammonium modified spherical polystyrene/divinylbenzene copoloymer, weak basic anion exchanger (mixed mode)

Especially for the enrichment of strongly acidic analytes (pK_a <1).

Please note: high-purity material with homogenous surface and optimised pore structure – due to optimised production process – enables lowest blanks, outstanding recovery rates and highest reproducibility.

Similar phases: Oasis® WAX, Strata™-X-AW

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€
3	60	1 × 30 units	**3905.1**	30 unit(s)	112,90
3	200	1 × 30 units	**3911.1**	30 unit(s)	126,85
3	500	1 × 30 units	**3912.1**	30 unit(s)	186,00

SPE Cartridges CHROMAFIX® HR-XAW

Macherey-Nagel.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K94.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K95.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K96.1**	50 unit(s)	332,20

SPE Cartridges CHROMAFIX® PS-H$^+$

Macherey-Nagel.

Strong PS-DVB cation exchanger (H^+-form) to remove or concentrate cations from water and to lower the pH of basic samples.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K73.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K74.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K75.1**	50 unit(s)	332,20

SPE Cartridges CHROMAFIX® PS-OH$^-$

Macherey-Nagel.

Strong PS-DVB anion exchanger (OH^- form) for removing or concentrating anions from water and for increasing the pH value in acidic samples.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K87.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K88.1**	50 unit(s)	260,15
Large	1.8	10 × 5 units	**1K89.1**	50 unit(s)	332,20

SPE Cartridges CHROMAFIX® PS-Mix (PS-H$^+$ + PS-OH$^-$)

Macherey-Nagel.

Mixture of PS-DVB copolymer in H^+ form (strong cation exchanger) and OH^- form (strong anion exchanger) for desalination of water.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1EE1.1**	50 unit(s)	263,40

SPE Cartridges CHROMAFIX® PS-Ag$^+$

Macherey-Nagel.

Strong PS-DVB cation exchanger (Ag^+ form) for removing halide ions from water.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K8A.1**	50 unit(s)	291,35
Medium	0.8	10 × 5 units	**1K8C.1**	50 unit(s)	313,90

SPE Cartridges CHROMAFIX® PS-Ba^{2+}

Macherey-Nagel.

Strong PS-DVB cation exchanger, Ba^{2+} form to remove sulphate ions from water.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K7H.1**	50 unit(s)	233,30
Medium	0.8	10 × 5 units	**1K7K.1**	50 unit(s)	260,15

SPE Cartridges CHROMAFIX® PS-RP

Macherey-Nagel.

Hydrophobic PS-DVB copolymer for removing organic interfering components from water.

Version	Column volume (ml)	Pack.	Art. No.	Pack Qty.	€
Small	0.4	10 × 5 units	**1K8E.1**	50 unit(s)	213,95
Medium	0.8	10 × 5 units	**1K8H.1**	50 unit(s)	251,55

SPE Phases for Environmental Analysis

SPE glass column CHROMABOND® Na_2SO_4/Florisil®

Macherey-Nagel. Material: Glass (borosilicate type I) with glass fiber (GF) filter elements.

For environmental analysis

Extraction of hydrocarbons from water according to DIN H53 / ISO DIS 9377-4

Special combination phase of sodium sulphate and Florisil®

Column volume (ml)	Filling quantity (mg)	Pack.	Art. No.	Pack Qty.	€

SPE polypropylene column CHROMABOND® SiOH-H_2SO_4/SA

Macherey-Nagel. Material: PP columns with PE filter elements.

Enrichment of PCBs from oil

Special combination phase:

- **SiOH-H_2SO_4:** H_2SO_4-impregnated silica phase for oxidation of accompanying compounds to ionic and/or polar compounds
- **SA:** strongly acidic cation exchanger based on silica with benzenesulphonic acid modification for removal of ionic and sulphur containing compounds

This combination column is used together with a SiOH column. Also available as Kombi-Kit (Art. No. 4793.1) together with SiOH columns.

Storage temperature: +4 °C

UN no. 3316 · ADR 9 II · WGK 1

Danger H314

SPE polypropylene column CHROMABOND® Combi-Kit PCB

Macherey-Nagel. Material: PP columns with PE filter elements.

Extraction of PCBs from oil with reference to DIN 51527, part 1

Components

CHROMABOND® SiOH-H_2SO_4/SA and CHROMABOND® SiOH (25 pieces each)

- **SiOH-H_2SO_4:** H_2SO_4-impregnated silica phase for oxidation of accompanying compounds to ionic and/or polar compounds
- **SA:** strongly acidic cation exchanger based on silica with benzenesulphonic acid modification for removal of ionic and sulphur containing compounds
- **SiOH:** Unmodified, slightly acidic silica gel

Storage temperature: +4 °C

SPE polypropylene column CHROMABOND® HLB

Macherey-Nagel. Material: PP columns with PE filter elements.

"Hydrophilic-lipophilic balanced" (HLB) *N*-vinylpyrrolidone-divinylbenzene copolymer. State-of-the-art spherical polymer for highest demands in solid phase extraction.

Advantages:

- Improved retention for polar substances.
- High loadability and excellent performance.
- Water wettable – even if the column bed runs dry, SPE can be continued.
- Applicable for a wide range of analyte polarities.

The alternative to Oasis HLB.

The hydrophilic-lipophilic balance of the copolymer (spherical part) shows a better retention for polar compounds.
SPE at its best!

Liquid-Liquid Extraction / SLE

(Solid-Supported Liquid-Liquid Extraction)

You replace the complex liquid-liquid extraction (LLE) with solid-liquid extraction (SLE).
These columns guarantee a far greater yield and better reproducible extraction process, from column to column, when compared to historical liquid/ liquid extraction techniques usually using water and an organic solvent into a conventional separation funnel.

- Fast and effective sample preparation technique
- Higher reproducibility and recovery rates compared to LLE methods
- No problems with phase boundaries - Prevents the emulsion formation that often occurs in LLE, since the water-immiscible solvents do not come into direct contact with the sample
- Reduced solvent requirements compared to LLE

(1) Sample application
(2) Adsorption of the sample
(3) Elution of the sample

Automatic separation of a two-phase mixture without separation funnel. Two-phase mixtures are completely applied to the column and the phase boundary is determined without further work. The special membrane automatically stops the flow when the lower phase has passed. The upper phase remains in the column, thus both phases are available for futher analysis.

Important note: Columns must not be run with vacuum or pressure. SPE columns for phase separation by gravity only.

Solvents applicable for elution:

Diethyl ether (T900)
tert-Butyl methyl ether (T175)
Ethyl acetate (T164)
n-Hexane (T165)
Cyclohexane (T163)
Toluene (T166)
Dichloromethane (T901)
Trichloromethane (chloroform) (T901)
Trichloromethane/methanol (90/10 or 85/15, v/v) (T901/T909)
Diethyl ether/ethanol (90/10 or 80/20, v/v) (T900/9065)
Dichloromethane/2-propanol (90/10 or 85/15, v/v) (T901/T902)

Polypropylene Columns CHROMABOND® for Phase Separation

Polypropylene columns CHROMABOND® PTS

Macherey-Nagel. Material: PP with special membrane.

PTS for solvents heavier than water, e.g., for trichloromethane, dichloromethane.

Polypropylene columns CHROMABOND® XTR

Macherey-Nagel. Material: PP columns with PE filter elements.

Kieselguhr phase for liquid-liquid extraction
Base material coarse-grained kieselguhr (also known as diatomaceous earth, hydromatrix, celite®)

Application:

- Liquid-liquid extraction of highly viscous aqueous solutions such as physiological fluids (blood, plasma, and serum), dyes in textiles, environmental and food analysis without use of a separation funnel
- High water loadability without breakthrough of water during elution with organic solvents
- Also suitable for removing small amounts of water from solvents which are not miscible with water
- pH stability: 1–13

Advantages:

- Fast, reproducible and economical
- Simultaneous preparation of several samples
- No problems with phase separation, no formation of emulsions
- High recovery rates
- Saves of time and solvents
- Organic solutions don't need to be dried after separation
- Large pore size, high pore volume, constantly high batch-to-batch quality

Similar phases: EXtrelut®, Chem Elut™. Isolute® SLE+, Hydromatrix™

For additional product data and safety information, see chapter Chemicals A–Z.

General column parameters:

Depending on the concentration of the analytes eluates can be analysed immediately, or the organic solvent is evaporated. The pH value of the aqueous solution can be altered on the column, which enables elution of different compounds of a sample under optimised conditions. Under certain circumstances, acidic, neutral, and basic compounds can be fractionated in this way.

Volume	Filling quantity	Max. Loadability with aqueous solution	Waiting time before elution	Elution volume
6 ml	1 g	1 ml	5–10 min	8 ml
30 ml	4,5 g	5 ml	5–10 min	16 ml
70 ml	14,5 g	20 ml	10–15 min	40 ml

Eluents with higher alcohol contents cause an increase in volume of the aqueous phase on the CHROMABOND® XTR. In such case, the column might be overloaded which leads to a displacement of the aqueous phase from the column. Therefore a greater capacity column should be used.

Extraction of analytes form an aqueous to an organic phase:

Column conditioning: Not required

Sample application: Aqueous solutions are applied to the dry CHROMABOND® XTR adsorbent. They are soaked up by the solid within a few minutes and spread over the surface of the kieselguhr material as a thin film.

Elution: Lipophilic analytes are eluted with water-immiscible organic solvents; the aqueous phase remains on the CHROMABOND® XTR adsorbent. Polar, water-soluble analytes, which remain in the aqueous phase on the XTR adsorbent, can be eluted e.g. with saturated NaCl.

Warning: Never exceed the volume capacities listed for each column size!

SPE Accessories CHROMABOND®

SPE Vacuum Manifold CHROMABOND®

Macherey-Nagel.

For **filtration** and solid **extraction**. Ideal for rapid **sample preparation**. Each tube position is equipped with a valve and can therefore be evacuated either individually or with the others. Each individual valve contains a Luer fitting, enabling filtration with a syringe filter or mounting of a disposable syringe. Inner body makes exact positioning of test tubes under each available opening.

Delivery incl. Glass cabinet with lid, lid gasket, plastic needles, vacuum gauge, control valve, Luer fittings, Luer valves (stopcocks), caps, variable rack, PP tank.

Version	Art. No.	Pack Qty.	€
for 12 positions, complete	**1ECC.1**	1 set	983,65
for 24 positions, complete	**1ECE.1**	1 set	1.445,90

For additional product data and safety information, see chapter Chemicals A–Z.

► We recommend the diaphragm vacuum pump ROTILABO® CR-MV100 (Art. No. ECK4.1) as a suitable vacuum pump.

Replacement parts for SPE Vacuum Manifolds CHROMABOND®

► Diaphragm vacuum pumps see www.carlroth.com

Drying Attachment CHROMABOND®

Macherey-Nagel.

For evaporating and concentrating eluates. This special lid has a gas connector on one side, from which the gas is fed simultaneously to the different positions of the vacuum chamber. Thus several eluates can be evaporated simultaneously by just changing the lid and applying a stream of inert gas, e.g., nitrogen.

Designation	Version	Art. No.	Pack Qty.	€
Drying Attachment	12 positions	**1H0H.1**	1 unit(s)	491,30
Drying Attachment	24 positions	**1H0K.1**	1 unit(s)	628,90

For additional product data and safety information, see chapter Chemicals A–Z.

Collection Rack CHROMABOND®

Macherey-Nagel.

To accommodate a variety of collection vessels for collecting eluates.

Version	Art. No.	Pack Qty.	€
12 positions	**1H09.1**	1 unit(s)	280,60
24 positions	**1H0A.1**	1 unit(s)	280,60
XTR	**1HN7.1**	1 set	919,15

Products to protect against cross-contamination CHROMABOND®

Macherey-Nagel.

For special applications, which require maximum protection from cross contamination. These special connectors are fitted through the lid. Thus the sample only has contact with the inert connector and can flow directly into the receptacle.

Designation	Art. No.	Pack Qty.	€
PTFE connectors (Luer)	**1H0E.1**	12 unit(s)	136,55
Stainless steel connectors (Luer)	**1H0C.1**	12 unit(s)	246,20

For additional product data and safety information, see chapter Chemicals A–Z.

Luer caps CHROMABOND®

Macherey-Nagel. Material: PP.

To fit standard Luer (male) outlets, and for all column and cartridge sizes.

Designation	Art. No.	Pack Qty.	€
Luer caps, blue	**1ECT.1**	12 unit(s)	75,60

Adapters for SPE Columns CHROMABOND®

Macherey-Nagel.

For coupling of several CHROMABOND® columns of the same or different sizes or for coupling of dispoable syringes with CHROMABOND® columns.

Version	Art. No.	Pack Qty.	€
For 1, 3, 6 ml PP columns	**2996.2**	10 unit(s)	96,35
For 3 and 6 ml glass columns	**1L16.1**	10 unit(s)	199,95

Tube adapters for SPE Columns CHROMABOND®

Macherey-Nagel. Material: PTFE.

For feeding large sample volumes to 1, 3 ml and 6 ml columns.
Tube length: approx. 1 m

Version	Art. No.	Pack Qty.	€
For 1, 3, 6 ml PP columns (incl. tube, weight)	**N867.1**	4 unit(s)	164,50
For 3, 6 ml glass columns (incl. tube, weight)	**N866.1**	4 unit(s)	255,85

Empty SPE columns CHROMABOND®

Macherey-Nagel.

Can be used with SPE vacuum manifolds (1ECC.1 or 1ECE.1) and other vacuum systems with Luer system. Excellent chemical resistance. Column outlet: Luer (male).

Delivery incl. filter elements.

Version	Ø x L (mm)	Art. No.	Pack Qty.	€
1 ml, polypropylene	7.5 x 65.8	**1ECH.1**	100 unit(s)	199,95

QuEChERS Products

For pesticide residue analysis in food

Within a few years after its development the **QuEChERS** method (**Qu**ick, **E**asy, **Ch**eap, **E**fficient, **R**ugged, **S**afe) has gained a leading position for determination of pesticide residues in food samples by GC-MS or LC-MS, allowing rapid and cheap clean-up of strongly matrix-contaminated samples. For optimizing the extraction of pH-dependent compounds, for minimizing decomposition of sensitive substances, and for broadening the matrix spectrum,different modifications of the QuEChERS method have been elaborated.
In addition to the required adsorbent Silica gel 60 diamino a number of individually weighed and premixed buffer and extraction mixtures is offered, specially composed for different sample matrices.
For extraction, the European standard EN 15662 recommends a citrate extraction mix (Mix I), while AOAC standard 2007.1 uses an acetate extraction mix (Mix II). For clean-up, the Diamino phase (PSA) removes, e.g., sugars and organic acids. Magnesium sulfate removes water, C_{18} ec removes non-polar interferences such as fats and the carbon phase removes pigments, sterols, and non-polar interferences. For selection of the proper clean-up mix see table below.

For selection of the proper QuEChERS mix see table below.

Step 1 - Extraction and salting-out				
Method	**Mix**	**Content of Mix**	**Sample weight**	**Solvent**
EN 15662:2008, citrate-buffered	**Mix I**	4 g $MgSO_4$, 1 g NaCl, 0,5 g Na_2H citrat · 1,5 H_2O, 1 g Na_3 citrat · 2 H_2O	10 g	10 ml acetonitrile
AOAC 2007.01, acetate-buffered	**Mix II**	6 g $MgSO_4$, 1,5 g NaOAc	15 g	15 ml 1 % acetic acid in acetonitrile
Step 2 - Clean up				
Sample property	**Low fat content** (e.g. pineapple, apples, pear, broccoli, strawberries, asparagus)	**Moderate content of chlorophyll and carotinoids** (e.g. carrots, lettuce)	**High content of chlorophyll and carotinoids** (e.g. blackberry, bell pepper, raspberry, spinach)	**High fat content** (e.g. avocado, baby food, meat, dairy products, muesli, nuts, oil)
Content of Mix	$MgSO_4$, Diamino (PSA)	$MgSO_4$, Diamino (PSA), Carbon	$MgSO_4$, Diamino (PSA), Carbon	$MgSO_4$, Diamino (PSA), C_{18} ec
EN 15662:2008	**Mix III** Diamino Clean up	**Mix VI** Diamino/C_{18} ec Clean up	**Mix V** Diamino/Carbon Clean up (higher carbon content)	**Mix VI** Diamino/C_{18} ec Clean up
AOAC 2007.01	**Mix XX** Diamino Clean up	**Mix XVII** Diamino/C_{18} ec Clean up	–	**Mix XIX** Diamino/C_{18} ec Clean up

		0682.3	1 kg	123,65
		0682.4	2.5 kg	241,90
	≥98 %, p.a., anhydrous, granulated	**2278.1**	100 g	23,55
		2278.2	500 g	55,80
		2278.3	1 kg	98,80
Silica gel 60 C_{18} ec	0,02–0,05 mm	**6070.1**	10 g	88,70
		6070.2	25 g	170,95
Silica gel 60 diamino	0,045 mm	**4878.1**	10 g	105,90
		4878.2	25 g	224,70
Sodium acetate	≥99 %, p.a., ACS, anhydrous	**6773.1**	250 g	40,75
		6773.2	1 kg	107,40
		6773.3	2.5 kg	235,45
		6773.5	25 kg	1.666,25
Sodium chloride	≥99,5 %, p.a., ACS, ISO	**3957.3**	500 g	18,20
		3957.1	1 kg	22,05
		3957.2	5 kg	80,55
		3957.4	10 kg	120,95
		3957.5	25 kg	241,90
tri-Sodium citrate dihydrate	≥99 %, p.a., ACS	**3580.4**	250 g	24,65
		3580.3	500 g	33,25
		3580.1	1 kg	53,65
		3580.2	5 kg	213,95
		3580.5	25 kg	564,40
di-Sodium hydrogen citrate 1,5-hydrate	≥99 %, cryst.	**2611.1**	250 g	26,80
		2611.2	500 g	40,35
		2611.3	1 kg	67,65

For additional product data and safety information, see chapter Chemicals A–Z.

► Centrifuge tubes see www.carlroth.com

Standard clean-up in food samples:

10 g sample are homogenised with 10 ml acetonitrile. After adding the internal standard the sample is shaken with 4 g magnesium sulphate and 1 g sodium chloride and afterwards centrifuged. 1 ml of the supernatant is spiked with 25 mg CHROMABOND® Diamino and 150 mg magnesium sulphate and shaken again. After centrifugation, the supernatant is analysed by GC/MS or LC/MS.

Adsorbents and what their use

$MgSO_4$	Removes excess of water
NaCl	For phase separation
Silica Gel 60 Diamino (PSA) (Primary Secondary Amine)	Removes organic and fatty acids, sugars and anthocyanin pigments
Silica Gel 60 C_{18} ec (reversed phase modified silica)	Traps nonpolar compounds, e.g., lipids
Carbon (GCB) (Activated Charcoal / Graphitized Carbon Black)	Removes pigments and sterols (please note: planar pesticides are also removed)

For further information see www.quechers.com

Salts for Analysis

Our salts for analysis are manufactured under strict production guidelines. Analytical purity and best quality reliably characterize each batch. Salts in p.a. quality made by Carl ROTH meet the high requirements for reproducible results. Most of our salts are additionally specified according to international standards like ACS and ISO.

Definition:
p.a.: pro analysi (for analysis)
ACS: American Chemical Society
ISO: International Standard Organisation

Aluminium salts, Al

Product name	Purity	Art. No.	Pack Qty.	€
Aluminium ammonium sulphate dodecahydrate	≥98 %, p.a., ACS	**X862.1**	500 g	41,40
		X862.2	1 kg	65,50
		X862.3	2.5 kg	130,00
Aluminium nitrate nonahydrate	≥98 %, p.a.	**CN85.1**	500 g	30,00
		CN85.2	1 kg	47,20
		CN85.3	2.5 kg	95,15
Aluminium sulphate hexadecahydrate	≥98 %, p.a., ACS	**5340.2**	100 g	23,55
		5340.1	500 g	59,05
		5340.3	1 kg	110,20
Potassium aluminium sulphate dodecahydrate	≥98 %, p.a., ACS	**P724.2**	500 g	34,30
		P724.1	1 kg	60,10
		P724.3	2.5 kg	123,65

Ammonium salts, NH_4^+

Product name	Purity	Art. No.	Pack Qty.	€
Ammonium acetate	≥97 %, p.a., ACS	**7869.2**	500 g	37,55
		7869.1	1 kg	51,50
		7869.3	2.5 kg	94,50
Ammonium bromide	≥99 %, p.a., ACS	**HN14.1**	500 g	40,75
		HN14.2	1 kg	70,85
		HN14.3	2.5 kg	145,15
Ammonium carbonate	≥30 % NH_3, p.a., ACS	**CP98.1**	500 g	30,00
		CP98.2	1 kg	49,35
		CP98.4	2.5 kg	106,45
		CP98.3	5 kg	198,90
Ammonium cerium(IV) sulphate dihydrate	≥99 %, p.a.	**4386.1**	100 g	57,55
		4386.2	250 g	125,25
		4386.3	500 g	203,20
Ammonium chloride	≥99,7 %, p.a., Ultra Quality	**K298.1**	500 g	32,15
		K298.2	1 kg	59,05
		K298.3	2.5 kg	99,90
		K298.4	5 kg	142,45
		K298.6	10 kg	235,45
		K298.5	25 kg	471,95
Ammonium dihydrogen phosphate	≥99 %, p.a., ACS	**P727.1**	500 g	63,45
		P727.2	1 kg	120,95
		P727.3	2.5 kg	263,40
Ammonium dimolybdate	≥99 %, p.a.	**3246.1**	100 g	29,60
		3246.2	500 g	96,65
		3246.3	1 kg	162,90
Ammonium fluoride	≥98 %, p.a., ACS	**6549.1**	250 g	76,90
		6549.2	500 g	131,70
		6549.3	1 kg	235,45
Ammonium heptamolybdate tetrahydrate	≥99 %, p.a.	**3666.1**	250 g	107,40
		3666.2	500 g	192,45
		3666.3	1 kg	353,70
		3666.7	25 kg	3.708,75
Ammonium hydrogen carbonate	≥99 %, p.a.	**T871.1**	500 g	30,00
		T871.2	1 kg	46,15
		T871.3	2.5 kg	76,25
		T871.4	5 kg	129,55
		T871.5	25 kg	482,70
di-Ammonium hydrogen citrate	≥98 %, p.a., ACS	**P735.1**	500 g	123,65
		P735.2	1 kg	231,15
		P735.3	2.5 kg	467,65
di-Ammonium hydrogen phosphate	≥98 %, p.a., ACS	**P736.1**	500 g	78,40
		P736.2	1 kg	137,10
		P736.3	2.5 kg	295,65
Ammonium hydrogen sulphate	≥98,5 %, p.a.	**5485.2**	250 g	36,45
		5485.1	500 g	61,20
		5485.3	1 kg	110,65
Ammonium iodide	≥99 %, p.a., ACS	**9818.1**	100 g	149,45
		9818.2	250 g	299,95
		9818.3	500 g	564,40
Ammonium iron(II) sulphate hexahydrate	≥99 %, p.a., ISO	**P728.1**	500 g	35,40
		P728.2	1 kg	61,20
		P728.3	2.5 kg	137,10
Ammonium iron(III) sulphate dodecahydrate	≥98,5 %, p.a., ACS, ISO	**P734.1**	500 g	55,80
		P734.2	1 kg	103,10
		P734.3	2.5 kg	213,95
Ammonium monovanadate	≥99,8 %, p.a.	**4232.1**	50 g	31,75
		4232.2	100 g	46,80
		4232.3	250 g	94,50
		4232.4	1 kg	306,40
Ammonium nitrate	≥98 %, p.a., ACS	**K299.1**	500 g	38,60
		K299.2	1 kg	64,00
		K299.3	2.5 kg	138,15
di-Ammonium oxalate monohydrate	≥99,5 %, p.a., ACS	**P737.1**	500 g	75,15
		P737.2	1 kg	126,35
		P737.3	2.5 kg	281,15
Ammonium peroxydisulphate	≥98 %, p.a., ACS	**9592.3**	50 g	16,05
		9592.2	100 g	25,70
		9592.5	500 g	69,80
		9592.1	1 kg	117,75
		9592.4	2.5 kg	231,15
tri-Ammonium phosphate trihydrate	≥98 %, p.a.	**1LK4.1**	100 g	21,40
		1LK4.2	500 g	67,65
		1LK4.3	1 kg	117,20
		1LK4.4	2.5 kg	235,45
Ammonium sulphate	≥99,5 %, p.a., ACS, ISO	**3746.2**	250 g	17,10
		3746.1	1 kg	39,25
		3746.3	2.5 kg	75,15
		3746.4	5 kg	127,95
		3746.6	10 kg	198,90
		3746.5	25 kg	424,65
Ammonium thiocyanate	≥99 %, p.a., ACS, ISO	**4477.1**	100 g	20,35
		4477.2	250 g	30,00
		4477.3	500 g	45,05
		4477.4	1 kg	71,95
		4477.7	25 kg	1.069,65

For additional product data and safety information, see chapter Chemicals A-Z.

Antimony salts, Sb

Product name	Purity	Art. No.	Pack Qty.	€
Antimony(III) chloride	≥99 %, p.a., ACS	**9819.1**	100 g	40,35
		9819.2	500 g	149,45
		9819.3	1 kg	263,40
Antimony(III) oxide	≥99 %, p.a.	**9826.1**	100 g	28,95
		9826.2	500 g	107,00
		9826.3	1 kg	206,95

Barium salts, Ba

Product name	Purity	Art. No.	Pack Qty.	€
Barium acetate	≥99 %, p.a., ACS	**2553.1**	250 g	47,85
		2553.2	500 g	80,10
		2553.3	1 kg	131,70
Barium carbonate	≥99 %, p.a., ACS	**P008.2**	25 g	17,10
		P008.3	100 g	33,25
		P008.1	500 g	117,75
Barium chloride dihydrate	≥99 %, p.a., ACS, ISO	**4453.1**	250 g	23,55
		4453.2	500 g	36,45
		4453.3	1 kg	64,00
		4453.4	2.5 kg	140,30
		4453.6	5 kg	257,50
		4453.5	25 kg	1.192,20
Barium hydroxide octahydrate	≥98 %, p.a., ACS, ISO	**P009.2**	250 g	34,95
		P009.1	500 g	58,60
		P009.3	1 kg	101,60
Barium nitrate	≥99 %, p.a., ACS	**4387.1**	250 g	34,95
		4387.2	500 g	54,75
		4387.3	1 kg	81,20

Bismuth salts, Bi

Product name	Purity	Art. No.	Pack Qty.	€
Bismuth(III) nitrate	≥71 % Bi, p.a., alkaline	**4447.1**	50 g	56,90
		4447.2	100 g	92,35
Bismuth(III) nitrate pentahydrate	≥98 %, p.a., ACS	**2554.1**	250 g	61,85
		2554.2	500 g	112,90
		2554.3	1 kg	203,20
Bismuth(III) oxide	≥99,5 %, p.a.	**6555.1**	50 g	46,80
		6555.2	100 g	66,55
		6555.3	500 g	209,65
Sodium bismuthate dihydrate	≥99 %, p.a.	**4401.1**	50 g	59,05
		4401.2	100 g	109,15
		4401.3	250 g	224,70

Bor salts, B

Product name	Purity	Art. No.	Pack Qty.	€
di-Sodium tetraborate decahydrate	≥99,5 %, p.a., ACS, ISO	**T880.1**	500 g	40,35
		T880.2	1 kg	62,25
		T880.3	2.5 kg	123,10
Sodium tetraphenyl borate	≥99,5 %, p.a., ACS	**4385.1**	10 g	50,45
		4385.2	25 g	110,20
		4385.3	100 g	349,40

Cadmium salts, Cd

Product name	Purity	Art. No.	Pack Qty.	€
Cadmium acetate dihydrate	≥99 %, p.a.	**KK06.1**	100 g	41,40
		KK06.2	250 g	87,65
Cadmium sulphate hydrate	≥99 %, p.a., ACS	**4482.2**	25 g	21,40
		4482.1	100 g	67,20
		4482.3	250 g	111,70
		4482.4	500 g	171,50
		4482.5	1 kg	317,15

Caesium salts, Cs

Product name	Purity	Art. No.	Pack Qty.	€
Caesium carbonate	≥99,9 %, p.a.	**6873.1**	5 g	20,35
		6873.2	25 g	46,15
		6873.3	100 g	145,15
		6873.4	500 g	461,20
Caesium chloride	≥99,999 %, p.a., Ultra Quality	**8627.4**	10 g	28,95
		8627.3	50 g	78,40
		8627.1	100 g	134,40
		8627.5	250 g	252,65
		8627.2	1 kg	934,20
Caesium sulphate	≥99,99 %, p.a.	**9355.3**	25 g	51,50
		9355.1	100 g	160,20
		9355.2	1 kg	1.069,65

Calcium salts, Ca

Product name	Purity	Art. No.	Pack Qty.	€
Calcium acetate monohydrate	≥99 %, p.a., ACS	**P011.3**	100 g	24,65
		P011.1	500 g	66,55
		P011.2	1 kg	123,65
Calcium carbonate	≥99 %, p.a., precipitated	**P012.4**	100 g	15,60
		P012.1	500 g	42,90
		P012.2	1 kg	76,25
		P012.3	2.5 kg	149,45
Calcium chloride dihydrate	≥99 %, p.a., ACS	**5239.2**	500 g	21,40
		5239.1	1 kg	31,75
		5239.3	2.5 kg	67,20
Calcium chloride hexahydrate	≥98 %, p.a.	**T886.2**	500 g	39,70
		T886.1	1 kg	67,65
		T886.3	2.5 kg	137,10
Calcium hydroxide	≥96 %, p.a.	**CN87.1**	500 g	51,50
		CN87.2	1 kg	88,05
		CN87.3	2.5 kg	177,40
Calcium nitrate tetrahydrate	≥99 %, p.a., ACS	**P740.1**	500 g	32,15
		P740.2	1 kg	53,65
		P740.3	2.5 kg	117,20
Calcium sulphate dihydrate	≥98 %, p.a., ACS	**P741.1**	500 g	60,10
		P741.2	1 kg	103,75
		P741.3	2.5 kg	220,40

Cerium salts, Ce

Product name	Purity	Art. No.	Pack Qty.	€
Ammonium cerium(IV) sulphate dihydrate	≥99 %, p.a.	**4386.1**	100 g	57,55
		4386.2	250 g	125,25
		4386.3	500 g	203,20
Cerium(IV) ammonium nitrate	≥99,5 %, p.a.	**HN28.1**	50 g	58,60
		HN28.2	100 g	107,00
		HN28.3	250 g	198,90
Cerium(III) nitrate hexahydrate	≥99,5 %, p.a.	**HN18.1**	100 g	94,10
		HN18.2	500 g	364,45
Cerium(IV) oxide	≥99,9 %, p.a.	**9837.1**	100 g	42,50
		9837.2	500 g	125,25
		9837.3	1 kg	206,95
Cerium(IV) sulphate tetrahydrate	≥98 %, p.a.	**P014.2**	50 g	96,65
		P014.1	100 g	180,10

For additional product data and safety information, see chapter Chemicals A-Z.

Chromium salts, Cr

Product name	Purity	Art. No.	Pack Qty.	€
Chromium(III) chloride hexahydrate	≥97 %, p.a.	**9832.1**	100 g	23,15
		9832.2	500 g	66,55
		9832.3	1 kg	107,00
Chromium(III) potassium sulphate dodecahydrate	≥98 %, p.a., ACS	**4389.1**	250 g	41,40
		4389.2	500 g	72,60
		4389.3	1 kg	125,70
Potassium chromate	≥99 %, p.a., ACS	**HN33.1**	100 g	46,80
		HN33.2	250 g	89,15
		HN33.3	500 g	158,60
		HN33.4	1 kg	267,70
Potassium dichromate	≥99,5 %, p.a., ACS, ISO	**P744.3**	100 g	33,90
		P744.1	500 g	119,90
		P744.2	1 kg	220,40
Reinecke salt monohydrate	≥93 %, p.a., ACS	**6629.1**	25 g	78,40
		6629.2	100 g	224,70

Cobalt salts, Co

Product name	Purity	Art. No.	Pack Qty.	€
Cobalt(II) acetate tetrahydrate	≥98 %, p.a., ACS	**HN29.1**	50 g	35,40
		HN29.2	100 g	53,65
		HN29.3	250 g	114,50
Cobalt(II) chloride hexahydrate	≥99 %, p.a., ACS, ISO	**T889.2**	50 g	75,15
		T889.3	100 g	117,20
		T889.1	250 g	220,40
Cobalt(II) nitrate hexahydrate	≥98 %, p.a., ACS	**HN16.1**	50 g	37,10
		HN16.2	100 g	59,70
		HN16.3	250 g	123,65
Cobalt(II,III) oxide	≥71 % Co, p.a.	**9834.1**	25 g	21,40
		9834.2	100 g	67,65
		9834.3	500 g	289,20
Cobalt(II) sulphate heptahydrate	≥97 %, p.a.	**4390.1**	100 g	46,15
		4390.2	250 g	96,65
		4390.3	500 g	170,95
Sodium hexanitro-cobaltate(III)	p.a., ACS	**4409.1**	25 g	25,30
		4409.2	100 g	71,95
		4409.3	250 g	149,45

Copper salts, Cu

Product name	Purity	Art. No.	Pack Qty.	€
Copper(II) acetate monohydrate	≥99 %, p.a., ACS	**HN30.1**	50 g	27,45
		HN30.2	100 g	41,40
		HN30.3	250 g	87,65
Copper(I) chloride	≥98 %, p.a., ACS	**4391.1**	100 g	28,95
		4391.2	250 g	58,60
		4391.3	500 g	107,40
		4391.4	1 kg	198,90
Copper(II) chloride dihydrate	≥99 %, p.a.	**CN82.1**	250 g	46,80
		CN82.2	500 g	81,60
		CN82.3	1 kg	152,15
		CN82.7	25 kg	3.241,15
Copper(II) nitrate trihydrate	≥99,5 %, p.a., ACS	**P754.1**	500 g	80,55
		P754.2	1 kg	209,65
Copper(II) oxide	p.a., ACS, wire	**4467.2**	25 g	26,80
		4467.1	100 g	86,55
		4467.3	250 g	185,45
Copper(II) sulphate	≥99 %, p.a., anhydrous	**P023.1**	250 g	41,85
		P023.2	1 kg	131,70
		P023.3	2.5 kg	278,45
Copper(II) sulphate pentahydrate	≥99,5 %, p.a., ACS, ISO	**P024.1**	500 g	35,40
		P024.2	1 kg	61,20
		P024.3	2.5 kg	117,20

Gallium salts, Ga

Product name	Purity	Art. No.	Pack Qty.	€
Gallium(III) oxide	≥99,99 %, p.a.	**1E11.1**	50 g	115,60
		1E11.2	100 g	185,90
		1E11.3	500 g	768,65
		1E11.4	1 kg	1.316,90

Gold salts, Au

Product name	Purity	Art. No.	Pack Qty.	€
Tetrachloroauric(III) acid trihydrate	≥99,9 %, p.a., Ultra Quality	**0689.1**	500 mg	145,15
		0689.2	1 g	231,15
		0689.3	5 g	897,65
	≥99,5 %, p.a.	**3867.1**	1 g	190,85
		3867.2	5 g	779,40

Indium salts, In

Product name	Purity	Art. No.	Pack Qty.	€
Indium(III) chloride	≥99,9 %, p.a.	**0307.1**	5 g	33,90
		0307.2	10 g	56,90
		0307.3	25 g	110,20
		0307.4	50 g	198,90
Indium(III) sulphate	≥99,99 %, p.a.	**0314.1**	5 g	34,30
		0314.2	10 g	55,40
		0314.3	25 g	98,80
		0314.4	50 g	181,70

Iron salts, Fe

Product name	Purity	Art. No.	Pack Qty.	€
Ammonium iron(II) sulphate hexahydrate	≥99 %, p.a., ISO	**P728.1**	500 g	35,40
		P728.2	1 kg	61,20
		P728.3	2.5 kg	137,10
Ammonium iron(III) sulphate dodeca-hydrate	≥98,5 %, p.a., ACS, ISO	**P734.1**	500 g	55,80
		P734.2	1 kg	103,10
		P734.3	2.5 kg	213,95
Iron(III) chloride hexahydrate	≥99 %, p.a.	**P742.1**	250 g	37,55
		P742.2	1 kg	115,60
		P742.5	25 kg	1.106,20
Iron(II) sulphate heptahydrate	≥99 %, p.a., ACS	**P015.1**	500 g	31,75
		P015.2	1 kg	49,35
		P015.3	2.5 kg	102,70
		P015.4	5 kg	181,70
		P015.6	10 kg	335,95
		P015.5	25 kg	714,90
Iron(III) sulphate hydrate	≥21 % Fe, p.a.	**1HEL.1**	100 g	24,20
		1HEL.2	500 g	53,65
		1HEL.3	1 kg	96,65
		1HEL.4	2.5 kg	198,90
Potassium hexacyano-ferrate(II) trihydrate	≥99 %, p.a., ACS, ISO	**P745.1**	500 g	110,20
		P745.2	1 kg	203,20
		P745.3	2.5 kg	456,90
Potassium hexacyano-ferrate(III)	≥99 %, p.a., ACS	**P746.3**	100 g	39,70
		P746.1	500 g	139,65
		P746.2	1 kg	267,70
Sodium nitroprusside dihydrate	≥99 %, p.a., ACS	**HN34.1**	25 g	36,45
		HN34.2	100 g	95,60
		HN34.3	500 g	364,45

Lanthanum salts, La

Product name	Purity	Art. No.	Pack Qty.	€
Lanthanum(III) nitrate hexahydrate	≥99,99 %, p.a.	**8358.2**	50 g	64,40
		8358.1	100 g	117,20
		8358.3	250 g	246,20
Lanthanum(III) oxide	≥99,99 %, p.a.	**8373.2**	50 g	38,60
		8373.1	100 g	64,40
		8373.3	250 g	134,40

For additional product data and safety information, see chapter Chemicals A-Z.

Lead salts, Pb

Product name	Purity	Art. No.	Pack Qty.	€
Lead(II) acetate, basic	≥33 % PbO, p.a., ACS	**2559.3**	25 g	19,25
		2559.1	500 g	47,85
		2559.2	1 kg	74,75
Lead(II) acetate trihydrate	≥99,5 %, p.a., ACS, ISO	**P739.1**	500 g	117,20
		P739.2	1 kg	205,90
		P739.3	2.5 kg	424,65
Lead(II) carbonate	≥98 %, p.a., ACS	**2558.1**	100 g	46,15
		2558.2	250 g	73,00
		2558.3	500 g	118,15
Lead(II) nitrate	≥99 %, p.a., ACS	**HN32.1**	100 g	23,55
		HN32.2	250 g	46,80

Lithium salts, Li

Product name	Purity	Art. No.	Pack Qty.	€
Lithium carbonate	≥99 %, p.a., ACS	**3995.1**	250 g	149,45
		3995.2	500 g	274,15
Lithium chloride	≥99 %, p.a., Ultra Quality	**3739.1**	250 g	192,45
		3739.2	1 kg	676,20
	≥99 %, p.a., ACS	**6698.1**	50 g	65,50
		6698.2	100 g	110,65
		6698.3	500 g	428,95
		6698.4	1 kg	762,20
Lithium fluoride	≥99 %, p.a.	**6715.1**	25 g	23,55
		6715.2	100 g	42,90
		6715.3	250 g	82,70
Lithium hexafluoro-phosphate	≥99,9 %, p.a.	**2243.1**	5 g	37,55
		2243.2	25 g	134,40
		2243.3	100 g	403,15
Lithium metaborate	≥98 %, p.a., ACS, anhydrous	**9840.1**	50 g	58,60
		9840.2	100 g	103,75
Lithium sulphate monohydrate	≥99 %, p.a.	**4393.1**	250 g	53,65
		4393.2	500 g	95,70
		4393.3	1 kg	160,20

Magnesium salts, Mg

Product name	Purity	Art. No.	Pack Qty.	€
Magnesium acetate tetrahydrate	≥99,5 %, p.a., ACS	**P026.1**	500 g	64,40
		P026.2	1 kg	117,20
Magnesium chloride hexahydrate	≥99 %, p.a., ACS	**2189.2**	250 g	20,35
		2189.1	1 kg	38,60
		2189.3	2.5 kg	71,95
		2189.5	25 kg	542,90
Magnesium nitrate hexahydrate	≥98 %, p.a., ACS	**HN31.1**	500 g	50,45
		HN31.2	1 kg	91,30
		HN31.3	2.5 kg	203,20
Magnesium sulphate	≥99 %, p.a., anhydrous	**0682.1**	100 g	24,65
		0682.2	500 g	67,65
		0682.3	1 kg	123,65
		0682.4	2.5 kg	241,90
	≥98 %, p.a., anhydrous, granulated	**2278.1**	100 g	23,55
		2278.2	500 g	55,80
		2278.3	1 kg	98,80
Magnesium sulphate heptahydrate	≥99 %, p.a., ACS	**P027.1**	500 g	31,75
		P027.2	1 kg	50,45
		P027.3	2.5 kg	96,65

Manganese salts, Mn

Product name	Purity	Art. No.	Pack Qty.	€
Manganese(II) carbonate	≥44 % Mn, p.a.	**9927.1**	250 g	25,70
		9927.2	500 g	42,90
		9927.3	1 kg	75,15
		9927.4	2.5 kg	147,85
Manganese(II) chloride monohydrate	≥99 %, p.a.	**4320.1**	100 g	17,10
		4320.2	500 g	36,45
		4320.3	1 kg	59,70
		4320.4	2.5 kg	117,20
		4320.5	25 kg	794,45
Manganese(II) chloride tetrahydrate	≥99 %, p.a.	**T881.3**	100 g	21,00
		T881.1	500 g	52,15
		T881.2	1 kg	91,30
Manganese(II) nitrate tetrahydrate	≥98 %, p.a.	**HN26.1**	250 g	31,75
		HN26.2	500 g	52,70
		HN26.3	1 kg	94,50
		HN26.4	2.5 kg	201,60
Manganese(II) sulphate monohydrate	≥99 %, p.a., ACS	**4487.1**	250 g	40,75
		4487.2	500 g	73,65
Potassium permanganate	≥99 %, p.a., ACS	**P752.1**	500 g	67,65
		P752.2	1 kg	112,90
		P752.3	2.5 kg	224,70

Mercury salts, Hg

Product name	Purity	Art. No.	Pack Qty.	€
Mercury(II) acetate	≥99 %, p.a., ACS	**KK05.1**	50 g	75,15
		KK05.2	100 g	134,95
Mercury(II) bromide	≥98 %, p.a., ACS	**6581.1**	50 g	70,45
		6581.2	250 g	274,15
Mercury(I) chloride	≥99,5 %, p.a., ACS	**6601.1**	50 g	71,95
		6601.2	100 g	120,95
		6601.3	500 g	456,90
Mercury(II) chloride	≥99,5 %, p.a., ACS	**KK04.1**	50 g	86,55
		KK04.2	100 g	160,20
Mercury(II) iodide	≥99 %, p.a., ACS, red	**6590.1**	50 g	69,80
		6590.2	100 g	112,90
		6590.3	500 g	471,95
Mercury(I) nitrate dihydrate	≥97 %, p.a.	**6605.1**	50 g	60,10
		6605.2	100 g	99,90
		6605.3	500 g	461,20
Mercury(II) nitrate monohydrate	≥98 %, p.a., ACS	**6595.1**	50 g	63,45
		6595.2	250 g	235,45
		6595.3	1 kg	901,95
Mercury(II) oxide	≥99 %, p.a., red	**4470.2**	25 g	57,55
		4470.1	50 g	101,60
Mercury(II) sulphate	≥98 %, p.a., ACS	**T112.1**	100 g	96,65
		T112.2	500 g	349,40
Mercury(II) thiocyanate	≥99 %, p.a.	**6600.1**	25 g	56,45
		6600.2	100 g	181,70
		6600.3	500 g	794,45

Molybdenum salts, Mo

Product name	Purity	Art. No.	Pack Qty.	€
Ammonium dimolybdate	≥99 %, p.a.	**3246.1**	100 g	29,60
		3246.2	500 g	96,65
		3246.3	1 kg	162,90
Ammonium heptamolybdate tetrahydrate	≥99 %, p.a.	**3666.1**	250 g	107,40
		3666.2	500 g	192,45
		3666.3	1 kg	353,70
		3666.7	25 kg	3.708,75
Molybdenum(VI) oxide	≥99,8 %, p.a.	**0142.1**	50 g	22,50
		0142.2	250 g	53,65
		0142.3	500 g	99,90
		0142.4	1 kg	188,15
Sodium molybdate dihydrate	≥99,5 %, p.a.	**0274.1**	50 g	22,50
		0274.2	100 g	34,95
		0274.3	250 g	62,90
		0274.4	1 kg	224,70

For additional product data and safety information, see chapter Chemicals A-Z.

Nickel salts, Ni

Product name	Purity	Art. No.	Pack Qty.	€
Nickel(II) chloride hexahydrate	≥98 %, p.a.	**4489.1**	100 g	58,60
		4489.2	250 g	117,20
Nickel(II) nitrate hexahydrate	≥99 %, p.a.	**4395.1**	100 g	37,10
		4395.2	250 g	75,15
		4395.3	500 g	138,70
Nickel(II) oxide	≥78 % Ni, p.a., green, 325 mesh	**9996.1**	100 g	28,95
		9996.2	500 g	82,25
		9996.3	1 kg	140,30
	≥75 % Ni, p.a., black, 400 mesh	**9925.1**	100 g	28,95
		9925.2	500 g	82,25
		9925.3	1 kg	140,30
Nickel(II) sulphate hexahydrate	≥99 %, p.a., ACS	**T111.1**	250 g	83,75
		T111.2	1 kg	289,20

Osmium salts, Os

Product name	Purity	Art. No.	Pack Qty.	€
Osmium tetraoxide	≥99,95 %, p.a., for electron microscopy	**8371.1**	100 mg	56,90
		8371.2	500 mg	138,70
		8371.3	1 g	217,70

Platinum salts, Pt

Product name	Purity	Art. No.	Pack Qty.	€
Potassium hexachloro-platinate(IV)	≥99,9 %, p.a.	**1H54.1**	500 mg	73,00
		1H54.2	1 g	120,95
		1H54.3	5 g	499,90

Potassium salts, K

Product name	Purity	Art. No.	Pack Qty.	€
Potassium acetate	≥99 %, p.a.	**T874.1**	500 g	42,90
		T874.2	1 kg	78,40
		T874.3	2.5 kg	160,20
		T874.5	25 kg	1.279,25
Potassium aluminium sulphate dodeca-hydrate	≥98 %, p.a., ACS	**P724.2**	500 g	34,30
		P724.1	1 kg	60,10
		P724.3	2.5 kg	123,65
Potassium bromate	≥99,8 %, p.a., ACS, ISO	**4396.1**	100 g	61,85
		4396.2	250 g	134,40
		4396.3	500 g	246,20
Potassium bromide	≥99 %, p.a., ACS	**A137.1**	100 g	26,80
		A137.2	500 g	52,60
		A137.3	1 kg	93,45
Potassium chlorate	≥99 %, p.a., ACS	**HN27.1**	100 g	19,25
		HN27.2	250 g	30,00
		HN27.3	500 g	46,15
Potassium chloride	≥99,5 %, p.a., ACS, ISO	**6781.3**	500 g	23,55
		6781.1	1 kg	38,60
		6781.2	5 kg	155,90
		6781.5	25 kg	600,95
Potassium chromate	≥99 %, p.a., ACS	**HN33.1**	100 g	46,80
		HN33.2	250 g	89,15
		HN33.3	500 g	158,60
		HN33.4	1 kg	267,70
Potassium dichromate	≥99,5 %, p.a., ACS, ISO	**P744.3**	100 g	33,90
		P744.1	500 g	119,90
		P744.2	1 kg	220,40
Potassium dihydrogen phosphate	≥99 %, p.a., ACS	**3904.2**	250 g	25,70
		3904.1	1 kg	81,60
		3904.3	5 kg	338,65
		3904.5	25 kg	1.558,75
Potassium disulphite	≥96 %, p.a.	**P019.1**	500 g	31,75
		P019.2	1 kg	47,85
		P019.3	5 kg	188,15
Potassium fluoride	≥99 %, p.a.	**CN83.1**	100 g	23,55
		CN83.2	250 g	45,70
		CN83.3	500 g	82,25
		CN83.4	1 kg	150,00
Potassium hexachloro-platinate(IV)	≥99,9 %, p.a.	**1H54.1**	500 mg	73,00
		1H54.2	1 g	120,95
		1H54.3	5 g	499,90
Potassium hexacyano-ferrate(II) trihydrate	≥99 %, p.a., ACS, ISO	**P745.1**	500 g	110,20
		P745.2	1 kg	203,20
		P745.3	2.5 kg	456,90
Potassium hexacyano-ferrate(III)	≥99 %, p.a., ACS	**P746.3**	100 g	39,70
		P746.1	500 g	139,65
		P746.2	1 kg	267,70
Potassium hydrogen carbonate	≥99,7 %, p.a., ACS	**P748.1**	500 g	39,70
		P748.2	1 kg	70,85
		P748.3	2.5 kg	160,20
di-Potassium hydrogen phosphate	≥99 %, p.a., anhydrous	**P749.1**	500 g	37,55
		P749.2	1 kg	67,65
		P749.3	2.5 kg	138,70
		P749.5	25 kg	1.069,65
di-Potassium hydrogen phosphate trihydrate	≥99 %, p.a.	**6878.2**	250 g	45,05
		6878.1	1 kg	134,40
		6878.3	2.5 kg	278,45
Potassium hydrogen phthalate	≥99,5 %, p.a., ISO	**P750.1**	500 g	92,35
		P750.2	1 kg	170,95
		P750.3	2.5 kg	370,90
Potassium hydrogen sulphate	≥99 %, p.a.	**P020.1**	500 g	37,55
		P020.2	1 kg	67,65
		P020.3	2.5 kg	149,45
Potassium iodate	≥99,4 %, p.a., ACS	**P751.1**	100 g	46,15
		P751.2	250 g	99,90
Potassium iodide	≥99,5 %, p.a., ISO	**6750.4**	50 g	26,80
		6750.1	250 g	107,00
		6750.3	500 g	198,90
		6750.2	1 kg	375,20
		6750.5	2.5 kg	740,70
		6750.6	5 kg	1.392,15
Potassium nitrate	≥99 %, p.a., ISO	**P021.1**	500 g	42,90
		P021.2	1 kg	83,75
		P021.3	2.5 kg	181,70
di-Potassium oxalate monohydrate	≥98,5 %, p.a., ACS	**HN38.1**	250 g	36,45
		HN38.2	500 g	58,60
		HN38.3	1 kg	106,45
Potassium periodate	≥99,8 %, p.a., ACS	**2588.1**	25 g	36,05
		2588.2	100 g	85,90
		2588.3	500 g	317,15
Potassium permanganate	≥99 %, p.a., ACS	**P752.1**	500 g	67,65
		P752.2	1 kg	112,90
		P752.3	2.5 kg	224,70
tri-Potassium phosphate trihydrate	≥99 %, p.a.	**1HEE.1**	100 g	23,55
		1HEE.2	500 g	53,65
		1HEE.3	1 kg	91,30
		1HEE.4	2.5 kg	170,95
Potassium sodium tartrate tetrahydrate	≥99 %, p.a., ACS, ISO	**8087.2**	500 g	53,25
		8087.1	1 kg	89,15
		8087.3	2.5 kg	192,45
Potassium sulphate	≥99 %, p.a., ACS, ISO	**P022.1**	500 g	50,00
		P022.2	1 kg	84,95
		P022.3	2.5 kg	188,15
Potassium thiocyanate	≥98,5 %, p.a., ACS	**P753.1**	500 g	96,65
		P753.2	1 kg	170,95
		P753.3	2.5 kg	403,15

Rubidium salts, Rb

Product name	Purity	Art. No.	Pack Qty.	€
Rubidium chloride	≥99 %, p.a.	**4471.2**	5 g	46,15
		4471.1	10 g	81,60
		4471.3	25 g	169,35
		4471.4	50 g	317,15

For additional product data and safety information, see chapter Chemicals A-Z.

Selenium salts, Se

Product name	Purity	Art. No.	Pack Qty.	€
Selenium(IV) oxide	≥99,5 %, p.a.	**1L0N.1**	100 g	37,10
		1L0N.2	250 g	81,20
		1L0N.3	500 g	146,75
		1L0N.4	1 kg	268,75
Sodium selenate	≥99 %, p.a.	**1EH9.1**	50 g	42,90
		1EH9.2	100 g	67,65
		1EH9.3	250 g	134,40

Complexometry

Salts for Complexometry

Product name	Purity	Synonymous	Art. No.	Pack Qty.	€
trans-1,2-Diaminocyclohexane-*N*,*N*,*N*',*N*'-tetracetic acid monohydrate	≥99 %, p.a., ACS	1,2-Cyclohexane dinitrilo tetraacetic acid, CDTA, Titration complex IV	**1412.1**	25 g	41,40
			1412.2	100 g	121,40
			1412.3	250 g	263,40
			1412.4	500 g	493,45
	≥99 %, for synthesis	1,2-Cyclohexane dinitrilo tetraacetic acid, CDTA, Titration complex IV	**1411.1**	100 g	89,15
			1411.2	250 g	203,20
			1411.3	500 g	364,45
			1411.4	1 kg	665,45
Diethylene triamine pentaacetic acid	≥99 %, for synthesis	DTPA, Titration complex V, Pentetic acid	**1407.1**	100 g	23,15
			1407.2	250 g	41,40
			1407.3	500 g	69,35
			1407.4	1 kg	123,65
EGTA	≥99 %, p.a.	Ethylene glycol bis(β-aminoethylether) tetraacetic acid, Titration complex VI	**3054.1**	10 g	42,50
			3054.2	50 g	166,65
			3054.3	100 g	289,20
Ethylenediamine tetraacetic acid	≥99 %, p.a., ACS	EDTA, Ethylenedinitrilo tetraacetic acid, Titration complex II	**8040.1**	100 g	23,55
			8040.3	500 g	74,10
			8040.2	1 kg	115,60
			8040.4	2.5 kg	231,15
			8040.5	25 kg	1.881,25
	≥99 %	EDTA, Ethylenedinitrilo tetraacetic acid, Titration complex II	**CN06.1**	250 g	31,75
			CN06.2	500 g	56,90
			CN06.3	1 kg	97,30
			CN06.5	2.5 kg	203,20
			CN06.4	5 kg	385,95
			CN06.6	10 kg	686,95
Ethylenediamine tetraacetic acid calcium disodium salt hydrate	≥98 %, Ph. Eur., USP	EDTA-$CaNa_2 \cdot 2\ H_2O$, Calcium EDTA disodium salt dihydrate, EDTA calcium disodium salt dihydrate	**6506.1**	250 g	61,20
			6506.2	500 g	115,60
			6506.3	1 kg	213,95
Ethylenediamine tetraacetic acid copper disodium salt dihydrate	≥99 %, for synthesis	EDTA-$CuNa_2 \cdot 2\ H_2O$, EDTA copper disodium salt dihydrate, Copper EDTA disodium salt dihydrate	**6499.1**	250 g	53,25
			6499.2	500 g	96,25
			6499.3	1 kg	166,65
Ethylenediamine tetraacetic acid dipotassium salt dihydrate	≥99 %, p.a.	EDTA-$K_2 \cdot 2\ H_2O$, EDTA Dipotassium salt dihydrate	**3053.1**	100 g	31,10
			3053.2	250 g	65,50
			3053.3	500 g	117,20
			3053.4	1 kg	209,65
			3053.5	5 kg	837,45
	≥99 %, for synthesis	EDTA-$K_2 \cdot 2\ H_2O$, EDTA Dipotassium salt dihydrate	**1408.1**	250 g	37,10
			1408.2	500 g	66,55
			1408.3	1 kg	117,20
			1408.4	5 kg	521,40
Ethylenediamine tetraacetic acid disodium salt dihydrate	≥99 %, p.a., ACS	EDTA-$Na_2 \cdot 2\ H_2O$, EDTA disodium salt dihydrate, Titration complex III	**8043.3**	100 g	31,10
			8043.1	250 g	49,35
			8043.2	1 kg	160,20
			8043.6	2.5 kg	306,40
			8043.4	5 kg	600,95
			8043.5	25 kg	1.714,65
	≥99 %, USP	EDTA-$Na_2 \cdot 2\ H_2O$, EDTA disodium salt dihydrate, Titration complex III	**X986.1**	250 g	33,25
			X986.2	1 kg	91,30
			X986.4	2.5 kg	192,45
			X986.3	5 kg	364,45
			X986.5	25 kg	1.607,15

Classics

Product name	Purity	Synonymous	Art. No.	Pack Qty.	€
Ethylenediamine tetraacetic acid iron(III) sodium salt trihydrate	≥98 %, for synthesis	EDTA-$FeNa_3 \cdot 3\ H_2O$, EDTA iron(III) sodium salt trihydrate, Iron(III) EDTA sodium salt trihydrate	**6498.1**	250 g	53,25
			6498.2	500 g	96,25
			6498.3	1 kg	166,65
Ethylenediamine tetraacetic acid magnesium disodium salt dihydrate	≥90 %, for synthesis	EDTA-$MgNa_2 \cdot 2\ H_2O$, EDTA magnesium disodium salt dihydrate, Magnesium EDTA disodium salt dihydrate	**6508.1**	250 g	47,20

For additional product data and safety information, see chapter Chemicals A-Z.

Volumetric Standard Solutions

A volumetric standard solution is a solution containing a precisely known concentration of a substance. The concentration of a volumetric standard solution is determined using a primary standard, which is accurately weighed and dissolved to make a specific volume. Volumetric standard solutions are made using reagent-grade (p.a.) substances as source materials.

Volumetric Standard Solutions, ready-to-use

The advantages of this over making them yourself are:

- Manufactured and tested using modern manufacturing and analytical methods
- Ready-to-use solutions
- High accuracy for precise analyses
- Application of NIST-certified reference substances for checking
- Connection to standard titrators is possible

ready-to-use

Volumetric standard solutions, ready-to-use

Product name	Purity	Pack.	Art. No.	Pack Qty.	€
Acetic acid	1 mol/l – 1 N, volumetric standard solution	plastic	**KK62.1**	1 l	36,05
	2 mol/l – 2 N, volumetric standard solution	plastic	**9883.1**	500 ml	49,35
			9883.2	1 l	74,10
	5 mol/l – 5 N, volumetric standard solution	plastic	**1E33.1**	1 l	109,15
Ammonia solution	4 mol/l – 4 N, volumetric standard solution	plastic	**9897.1**	500 ml	71,50
			9897.2	1 l	117,75
Ammonium iron(II) sulphate solution	0,12 mol/l – 0,12 N, volumetric standard solution, for COD determination	plastic	**KK60.1**	1 l	59,70
Ammonium thiocyanate solution	0,1 mol/l – 0,1 N, volumetric standard solution	plastic	**P718.1**	1 l	27,45
Barium chloride solution	0,05 mol/l – 0,1 N, volumetric standard solution	plastic	**0468.1**	500 ml	38,60
Barium hydroxide solution	0,05 mol/l – 0,1 N, volumetric standard solution	plastic	**N054.1**	1 l	59,70
Bariumperchlorate solution	0,005 mol/l – 0,005 N, volumetric standard solution, in 2-propanol/water	glass	**KK61.1**	1 l	64,40
Benzethonium chloride solution	0,004 mol/l – 0,004 M, volumetric standard solution	plastic	**9217.1**	1 l	33,90
Bromide bromate solution	0,01 mol Br_2/l – 0,02 N, volumetric standard solution, 1/300 mol $KBrO_3$/l	plastic	**1E25.1**	1 l	65,50
	0,05 mol Br_2/l – 0,1 N, volumetric standard solution, 1/60 mol $KBrO_3$	plastic	**8131.1**	1 l	40,75

ROTI®Volum, Volumetric Solutions in Ampoules

Advantages:

- Concentrated standard solutions packaged in practical and low-cost ampoules
- Designed for flexible and easy handling, and as a space-saving alternative to ready-to-use custom solutions
- Standard solutions are prepared through dilution to a final volume of exactly one litre.
- Exactly defined molar concentration (±0,2 %) according to the preparation
- High accuracy for precise analyses

	0,5 mol/l – 1 N, volumetric standard solution	**CN65.1**	1 unit(s)	28,95

For additional product data and safety information, see chapter Chemicals A-Z.

Titer details: Many of our standard solutions also provide the corresponding titer details on the certificate of analysis, in addition to the amount of substance concentrations. If this is not the case, you can assume that the titer is as follows:
1 ± variation from specification.
Example: Amount of substance concentration 0,1 mol/l ±0,2 %
It follows that the titer is 1 ±0,2 %, i.e. 0,998–1,002.
We recommend the regular checking of the titer prior to application for opened products.

Indicators and Dyes

Carl ROTH offers many indicators and dyes of high purity, which can be used in special applications.

ready-to-use

Indicator and dye solutions

Product name	Purity	General application	Transition range pH	Colour conversion	Art. No.	Pack Qty.	€
Bromocresol green indicator solution	0,1 % in ethanol, denatured	Indicator pH 3.8-5.4	3,8 – 5,4	yellow - blue	**9949.1**	100 ml	30,65
Bromocresol purple indicator solution	0,1 % in water	Indicator pH 5.2-6.8	5,2 – 6,8	yellow - purple	**9955.1**	100 ml	58,60
Bromophenol blue indicator solution	0,1 % in ethanol, denatured	Indicator pH 3.0-4.6	3,0 – 4,6	yellow - blue	**9952.1**	100 ml	30,65
Bromophenol red indicator solution	0,1 % in ethanol, denatured	Indicator pH 5.2-7.0	5,2 – 7,0	yellow red - purple	**9956.1**	100 ml	55,40
Bromothymol blue indicator solution	0,04 % in water	Indicator pH 6.0-7.6	6,0 – 7,6	yellow - blue	**9947.1**	100 ml	46,80
Calconcarboxylic acid indicator solution	0,4 % in methanol	For metal titration.			**1E05.1**	100 ml	80,10
Chrome azurol S indicator solution	0,5 % in diluted 2-Propanol	Indicator for metal ions			**1CYY.1**	100 ml	67,20
o-Cresolphthaleine indicator solution	0,1 % in Ethanol, denatured	Inidcator pH 8.2-9.8, alternative for Phenol-phthaleine	8,2 – 9,8	colourless - red violet	**1LAE.1**	250 ml	85,90
Dimethyl yellow indicator solution	0,2 % in ethanol, denatured	Indicator pH 2.9-4.0	2,9 – 4,0	red - yellow	**1E00.1**	100 ml	39,70
Eriochrome black T indicator solution	0,1 % in ethanol, denatured	Metal indicator			**1E01.1**	100 ml	57,95
Ferroin indicator solution	for sewage analysis, for COD determination	According to DIN 38409 part H41, H43 and H44.		red - blue	**T131.1**	100 ml	43,55
Ferroin solution	1/40 mol/l (1/40 M) Redox indicator	Redox indicator		red - blue	**T132.1**	100 ml	50,45
Litmus indicator solution	2,5 %, in ethanol	Indicator pH 4.5-8.3	4,5 – 8,3	red - blue	**1EE2.1**	250 ml	37,10
Methylene blue indicator solution	0,01 mol/l in water	Redox indicator		colurless - blue	**9953.1**	100 ml	41,85
Methyl orange indicator solution	0,1 % in water	Indicator pH 3.2-4.4	3,2 – 4,4	pink - yellow	**T119.1**	500 ml	24,65
					T119.2	1 l	43,55
Methyl red indicator solution	0,1 % in ethanol, denatured	Indicator pH 4.2-6.2	4,2 – 6,2	pink - yellow	**T121.1**	250 ml	36,45
					T121.2	1 l	94,10
Mixed indicator 5	for ammonia titration		4,5 – 5,5	red- green	**T125.1**	250 ml	96,65
Phenolphthalein indicator solution	0,1 % in ethanol 90 %, denatured	Indicator pH 8.0-10.0	8,0 – 10,0	colourless - purple	**8145.1**	250 ml	24,20
					8145.2	500 ml	36,45
Phenolphthalein indicator solution	1 % in ethanol 90 %, denatured	Indicator pH 8.0-10.0	8,0 – 10,0	colourless - purple	**K034.1**	250 ml	26,35
					K034.2	500 ml	37,10
					K034.3	1 l	54,30
Rhodamine B solution	0,5 % in 2-Propanol	Fluorescent dye			**1E02.1**	100 ml	77,30
Starch indicator solution	1 % in water, stabilised			colourless - blue	**T133.1**	500 ml	31,75
					T133.2	1 l	51,50
Sudan III solution	saturated, in acetone and ethanol	Fat-soluble azo dye			**1EE3.1**	250 ml	37,10
Tashiro's indicator solution	0,75 g/l methyl red sodium salt + 0,375 g/l methylene blue in ethanol 50 % (v/v), denatured	pH indicator, mixed indicator	4,2 – 6,2	violet - green	**2624.1**	250 ml	22,05
Thymol blue indicator solution	0,1 % in ethanol, denatured	Indicator pH 1.2-2.8 and pH 8.0-9.2	1,2 – 2,8, 8,0 – 9,2	red - yellow, yellow - blue	**9954.1**	250 ml	56,45
Thymolphthalein indicator solution	0,1 % in ethanol, denatured	Indicator pH 8.8-10.5	8,8 – 10,5	colourless - blue	**8152.1**	500 ml	58,60
	1 % in ethanol, denatured	Indicator pH 8.8-10.5	8,8 – 10,5	colourless - blue	**1E03.1**	100 ml	72,60
Victoria blue B solution	0,04 %, in ethanol	blue violet dye			**1EE4.1**	250 ml	37,10

For additional product data and safety information, see chapter Chemicals A-Z.

Indicator buffer tablets

for the determination of water hardness with EDTA

Non-binding application proposal:
Dissolve one tablet in 50 ml water sample and bring to pH 11 with approx. 1 ml ammonia solution 30 % (art. CP17). Titrate with EDTA disodium salt volumetric solution (art. T136 or T137) from red to green.

WGK 1

Warning H302-H317-H319

Art. No.	Pack Qty.	Pack.	€
7649.1	100 unit(s)	plastic	31,10
7649.2	500 unit(s)	plastic	82,70

Indicator solution UNISOL

For pH measurement in weak buffered solutions, in pure water, in surface water and in highly diluted acids or alkalis. Droplets of an indicator solution are added to the sample and the reaction colour is compared to a colour chart.

Delivery incl. 100 ml dropper bottle containing reagent (sufficient for approx. 500 pH measurements), colour chart and one type 13/72 measuring cuvette.

					3256.1	50 g	74,75
					3256.3	100 g	98,40
Metanil yellow (C. I. 13065)	p.a.	1,2 – 2,3	violet-red - yellow	Dissolve 0.1 g in 100 ml of water	**7714.1**	5 g	18,85
					7714.2	25 g	33,25
					7714.3	100 g	80,55
4-(Phenylazo) diphenylamine	≥97 %, p.a.	1,2 – 2,5	red - yellow	Insoluble in water, soluble in methanol	**4538.1**	5 g	42,90
					4538.2	25 g	115,60
m-Cresol purple	p.a.	1,2 – 2,8 7,4 – 9,0	red - yellow, yellow - purple	Dissolve 0.04 g in 100 ml ethanol (20 %) or 0.04 g in 1.05 ml NaOH 0.1 mol/l and make up to 100 ml with water	**5160.1**	1 g	17,10
					5160.2	5 g	46,80
					5160.3	10 g	82,25
Thymol blue	p.a., ACS	1,2 – 2,8 8,0 – 9,2	red - yellow, yellow - blue	Dissolve 0.04 g in 100 ml ethanol (20 %) or 0.04 g in 0.86 ml NaOH 0.1 mol/l and make up to 100 ml with water	**KK16.1**	5 g	22,50
					KK16.2	10 g	33,25
					KK16.3	25 g	67,20
Thymol blue sodium salt	p.a., ACS	1,2 – 2,8 8,0 – 9,2	red - yellow, yellow - blue	Dissolve 0.1 g in 100 ml of water	**2606.1**	5 g	26,35
					2606.2	25 g	69,80
Xylenolblue	p.a.	1,2 – 2,8 8,0 – 9,8	red - yellow, yellow - violet	Dissolve 0.1 g in 100 ml of ethanol (50 %)	**7746.1**	1 g	21,40
					7746.2	5 g	52,60
					7746.3	10 g	96,25
Orange IV sodium salt (C.I. 13080)	for microscopy	1,4 – 2,6	red - yellow	Dissolve 0.1 g in 100 ml of water	**7731.1**	5 g	20,35
					7731.2	25 g	36,05
					7731.3	100 g	84,40
Quninaldine red	pure	1,4 – 3,2	colourless - red violet	Dissolve 0.1 g in 100 ml ethanol	**1LA9.1**	1 g	23,15
					1LA9.2	5 g	57,55
					1LA9.3	10 g	102,70
Eosin B (C.I. 45400)	for microscopy	1,7 – 1,8	colourless - pink fluorescent	Dissolve 0.5–2.0 % in water or ethanol	**0306.1**	10 g	21,40
					0306.2	25 g	35,40
					0306.3	50 g	55,80
Martius yellow (C. I. 10315)	extra pure	2,0 – 3,2	colourless - yellow	Dissolve 0.1 g in 100 ml of water or ethanol	**7713.1**	5 g	25,30
					7713.2	25 g	47,85
					7713.3	100 g	131,70
Dimethyl yellow (C.I. 11020)	pure	2,9 – 4,0	red - yellow	Dissolve 0.1 g in 100 ml ethanol (96 %)	**9982.1**	10 g	19,90
					9982.2	50 g	57,55
					9982.3	100 g	102,70

Classics

Product name	Purity	Transition range pH	Colour conversion	Instructions for use	Art. No.	Pack Qty.	€
Bromophenol blue	ACS, for microscopy	3,0 – 4,6	yellow - blue	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 0.74 ml NaOH 0.1 mol/l and make up to 100 ml with water	**T116.1**	5 g	27,45
					T116.2	10 g	39,70
					T116.3	25 g	63,35
Bromophenol blue sodium salt	for electrophoresis	3,0 – 4,6	yellow - blue	Dissolve 0.1 g in 100 ml water	**A512.2**	5 g	28,95
					A512.1	10 g	55,40
					A512.3	25 g	93,45
Congo red (C.I. 22120)	for microscopy	3,0 – 5,2	blue - red	Dissolve 0.2 g in 100 ml of water	**0322.1**	5 g	22,05
					0322.2	25 g	36,05
					0322.3	100 g	87,65
Methyl orange (C.I. 13025)	ACS, for microscopy	3,2 – 4,4	pink - yellow	Dissolve 0.04 g in 100 ml of ethanol (20 %) or 0.4 g in 100 ml of water	**T118.1**	50 g	34,30
					T118.2	100 g	50,45
					T118.3	250 g	77,95
Bromochlorophenol blue sodium salt	p.a.	3,2 – 4,8	yellow - purple	Dissolve 0.1 g in 100 ml water	**6558.1**	1 g	51,50
					6558.2	5 g	126,35
Ethyl orange sodium salt	p.a.	3,4 – 4,8	pink - yellow	Dissolve 0.1 g in 100 ml water	**7667.1**	5 g	23,55
					7667.2	25 g	46,15
					7667.3	100 g	97,30
Bromocresol green	ACS	3,8 – 5,4	yellow - blue	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 0.58 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**T115.1**	1 g	20,35
					T115.2	5 g	35,40
					T115.3	10 g	60,75
					T115.4	25 g	114,50
Bromocresol green sodium salt	ACS	3,8 – 5,4	yellow - blue	Dissolve 0.04 g in 100 ml water	**KK18.1**	1 g	16,70
					KK18.2	5 g	44,00
					KK18.3	25 g	149,45
Methyl red (C. I. 13020)	p.a., ACS	4,2 – 6,2	pink - yellow	Dissolve 0.1 g in 100 ml ethanol (96 %)	**T120.1**	10 g	22,50
					T120.2	25 g	36,05
Methyl red hydrochloride (C.I. 13020)	p.a.	4,2 – 6,2	red - yellow	Dissolve 0.1 g in 100 ml ethanol (96 %)	**2562.1**	25 g	33,25
					2562.2	100 g	80,55
Methyl red sodium salt (C.I. 13020)	p.a., water-soluble	4,2 – 6,2	red - yellow	Dissolve 0.1 g in 100 ml water	**5003.1**	25 g	30,65
					5003.2	100 g	89,15
Alizarin red S (C.I. 58005)	pure	4,3 – 6,3 9,4 – 12,0	yellow - red violet, brown orange - violet	Dissolve 0.1-1 g in 100 ml ethanol (96 %)	**0348.1**	10 g	25,30
					0348.2	25 g	38,60
					0348.3	100 g	123,10
Ethyl red	p.a.	4,5 – 6,5	red-yellow	Dissolve 0.1 g in 100 ml ethanol (96 %)	**7677.1**	5 g	26,35
					7677.2	25 g	69,80
					7677.3	100 g	220,40
Litmus (C.I. 1242)	p.a.	4,5 – 8,3	red - blue	Dissolve 4 g in 100 ml water	**0248.1**	5 g	17,10
					0248.2	25 g	44,00
Chlorophenol red	p.a.	4,8 – 6,4	yellow - red violet	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 0.94 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**0347.1**	5 g	37,55
					0347.2	10 g	59,05
					0347.3	25 g	134,40
Aurin (C. I. 43800)	extra pure	5,0 – 6,8	yellow - pink	Dissolve 0.1 g in 100 ml ethanol (96 %)	**1H58.1**	5 g	23,15
					1H58.2	25 g	46,15
2-Nitrophenol	pure	5,0 – 7,0	colourless - yellow	Dissolve 2 g in 100 ml ethanol	**1LAH.1**	25 g	17,75
					1LAH.2	100 g	32,15
					1LAH.3	500 g	99,45
Resazurin sodium salt	extra pure	5 – 7	orange - violet	Dissolve 0.1 g in 100 ml water, freshly made	**1H5X.1**	1 g	27,45
					1H5X.2	5 g	76,25
					1H5X.3	10 g	137,10
Bromocresol purple	p.a., ACS	5,2 – 6,8	yellow - purple	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 0.74 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**0317.1**	5 g	27,45
					0317.2	25 g	86,55
Bromocresol purple sodium salt	p.a., ACS	5,2 – 6,8	yellow - violet	Dissolve 0.1 g in 100 ml water	**2555.1**	5 g	25,70
					2555.2	25 g	65,50
Bromophenol red free acid	p.a.	5,2 – 7,0	yellow red - purple	Dissolve 0.1 g in 100 ml ethanol (20 %)	**6573.1**	1 g	26,35
					6573.2	5 g	51,50
					6573.3	50 g	239,20
Bromophenol red sodium salt	p.a.	5,2 – 7,0	yellow red - purple	Dissolve 0.1 g in 100 ml water	**6579.1**	1 g	25,30
					6579.2	5 g	50,00
					6579.3	50 g	214,50
4-Nitrophenol	≥99 %, for synthesis	5,4 – 7,5	colourless - yellow	Dissolve 0.25 g in 100 ml ethanol (50 %)	**6524.1**	25 g	16,70
					6524.2	100 g	30,00
					6524.3	500 g	77,95
Alizarin (C.I. 58000)	p.a.	5,5 – 6,8 10,1 – 12,1	yellow - violet, purple - purple	Dissolve 0.5 g in 100 ml ethanol (96 %)	**4476.2**	25 g	30,00
					4476.1	50 g	45,70
					4476.3	100 g	62,25
Nitrazine yellow (C.I. 14890)	p.a.	6,0 – 7,2	yellow - blue	Dissolve 0.1 g in 100 ml water	**7727.1**	1 g	24,20
					7727.2	5 g	88,70
					7727.3	10 g	166,65

Product name	Purity	Transition range pH	Colour conversion	Instructions for use	Art. No.	Pack Qty.	€
Bromothymol blue	p.a., ACS	6,0 – 7,6	yellow - blue	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 0.64 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**T117.1**	5 g	30,00
					T117.2	25 g	75,15
					T117.3	50 g	127,95
					T117.7	100 g	224,70
Bromothymol blue sodium salt	p.a., ACS	6,0 – 7,6	yellow - blue	Dissolve 0.04 g in 100 ml water	**KK19.1**	5 g	25,70
					KK19.2	10 g	41,40
					KK19.3	25 g	75,80
Bromoxylenol blue	p.a.	6,0 – 7,6	yellow - blue	Dissolve 0.1 g in 100 ml ethanol (96 %)	**KK27.1**	1 g	17,10
					KK27.2	5 g	49,35
					KK27.3	10 g	81,60
Brilliant yellow (C.I. 24890)	p.a.	6,4 – 8,0	yellow - red orange	Dissolve 0.1 g in 100 ml water	**7645.1**	5 g	24,20
					7645.2	25 g	42,90
					7645.3	100 g	99,90
Xylenol orange tetrasodium salt	p.a., ACS	6,4 – 10,4	yellow - orange-red	Dissolve 0.1 g in 100 ml water	**2727.1**	1 g	37,10
					2727.2	5 g	85,50
					2727.3	10 g	137,10
					2727.4	50 g	471,95
Phenol red	p.a., ACS	6,5 – 8,2	yellow - red	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 1.13 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**T127.1**	5 g	19,25
					T127.2	25 g	45,70
					T127.3	100 g	126,35
	extra pure	6,5 – 8,2	yellow - red	Dissolve 0.1 g in 100 ml ethanol (20 %) or 0.04 g in 1.13 ml NaOH 0.1 mol/l and fill up with water to 100 ml	**1HA8.1**	5 g	20,35
					1HA8.2	25 g	51,50
Neutral red (C.I. 50040)	p.a.	6,8 – 8,0	red - orange yellow	Dissolve 0.3 g in 100 ml of ethanol (70 %)	**T122.2**	1 g	30,00
					T122.1	10 g	90,85
					T122.3	25 g	181,70
Phenol red sodium salt	p.a., ACS	6,8 – 8,2	yellow - red	Dissolve 0.1 g in 100 ml water	**2566.1**	5 g	26,35
					2566.2	25 g	65,05
3-Nitrophenol	≥99 %, for synthesis	6,8 – 8,6	colourless - yellow-orange	Dissolve 0.3 g in 100 ml ethanol (50 %)	**4533.1**	25 g	69,80
					4533.2	100 g	174,70
					4533.3	250 g	370,90
1-Naphtholphthalein	extra pure	7,1 – 8,3	pink - blue	Dissolve 0.1 g in 100 ml ethanol (96 %)	**1H5A.1**	5 g	34,30
					1H5A.2	10 g	57,55
					1H5A.3	25 g	102,70
Orange II sodium salt (C.I. 15510)	for microscopy	7,4 – 8,6 10,2 – 11,8	amber - orange, orange - red	Dissolve 0.1 g in 100 ml of water	**7729.1**	5 g	18,85
					7729.2	25 g	33,25
					7729.3	100 g	80,55
Curcumin	≥90 %, natural, powdered, oil-soluble	7,8 – 9,2	yellow - reddish brown	Dissolve 0.1 g in 100 ml ethanol (96 %)	**9469.1**	10 g	33,90
					9469.2	25 g	61,85
					9469.3	50 g	101,60
Phenolphthalein (C.I. 764)	≥99 %, p.a.	8,0 – 10,0	colourless - purple	Dissolve 0.1 g in 100 ml ethanol (96 %)	**T126.2**	50 g	21,40
					T126.1	100 g	30,00
					T126.3	500 g	81,60
o-Cresolphthaleine	pure	8,2 – 9,8	colourless - red violet	Dissolve 0.1 g in 100 ml ethanol	**1LAC.1**	5 g	11,30
					1LAC.2	25 g	46,15
					1LAC.3	100 g	114,50
1-Naphtholbenzein	extra pure	8,5 – 9,8	yellow - blue-green	Dissolve 0.1 g in 100 ml 2-propanol	**1H56.1**	5 g	23,15
					1H56.2	10 g	40,35
					1H56.3	25 g	80,55
Thymolphthalein	p.a., ACS	8,8 – 10,5	colourless - blue	Dissolve 0.1 g in 100 ml of ethanol (50 %)	**HN97.1**	5 g	25,30
					HN97.2	10 g	42,90
					HN97.3	50 g	155,90
Nile blue chloride (C.I. 51180)	extra pure	9,4 – 11,0	blue - red	Dissolve 0.1 g in 100 ml ethanol or water	**7723.1**	5 g	33,25
					7723.2	25 g	96,25
					7723.3	100 g	263,40
Alkali blue 6B (C.I. 42765)	p.a.	9,4 – 14,0	blue - red	Dissolve 0.1 g in 100 ml water	**5155.1**	10 g	26,80
					5155.2	25 g	51,50
					5155.3	100 g	149,45
β-Naphthol violet	extra pure	10 – 12	brown - violet	Dissolve 0.1 g in 100 ml water	**1H5K.1**	10 g	28,95
					1H5K.2	25 g	52,15
					1H5K.3	50 g	86,55
Nile blue A (C.I. 51180)	~80 %	10,2 – 13,0	blue - violet-red	Dissolve 0.1 g in 100 ml of water	**4377.2**	5 g	22,50
					4377.1	10 g	36,05
					4377.3	25 g	69,80
Resorcinol yellow (C.I. 14270)	extra pure	11,0 – 12,7	yellow - orange	Dissolve 0.1 g in 100 ml ethanol or water	**7741.1**	5 g	18,85
					7741.2	25 g	33,25
					7741.3	100 g	80,55
4-(4-Nitrophenylazo)-resorcinol	p.a.	11,0 – 13,0	yellow - violet	Dissolve 0.1 g in dil. NaOH	**2563.1**	10 g	34,30
					2563.2	25 g	52,15

Product name	Purity	Transition range pH	Colour conversion	Instructions for use	Art. No.	Pack Qty.	€
Titan yellow (C. I. 19540)	extra pure	11,0 – 13,0	yellow - red	Dissolve 0.1 g in 100 ml ethanol (20 %)	**7739.1**	5 g	21,00
					7739.2	25 g	37,10
					7739.3	100 g	91,30
Indigo carmine (C.I. 73015)	≥80 %, p.a.	11,5 – 14,0	blue - yellow	Dissolve 0.25 g in 100 ml ethanol (50 %) or 1 g in 100 ml water	**2700.1**	25 g	32,15
					2700.2	100 g	83,75
	for microscopy	11,5 – 14,0	blue - yellow	Dissolve 0.05 g in 100 ml of water	**5156.1**	10 g	21,40
					5156.2	25 g	33,25
					5156.3	100 g	80,55

Redox indicators

Product name	Purity	Redox potential E_0[V] at pH=0 and 20 °C	Ox. colour	Red. colour	Instructions for use	Art. No.	Pack Qty.	€
Amido black 10 B (C.I. 20470)	p.a.	+0.57	yellow-brown	blue	Dissolve 0.2 g in 100 ml water	**9590.1**	25 g	50,45
Barium diphenyl-amine sulfonate	p.a., ACS		red-violet	colourless	Dissolve 0.2 g in 100 ml water	**2674.1**	5 g	39,25
						2674.2	25 g	107,00
Brilliant cresyl blue (C.I. 51010)	p.a.	+0.58	blue	colourless	Dissolve 0.5–3 g in 100 ml water or ethanol (96 %)	**5162.1**	5 g	30,65
						5162.2	10 g	47,85
2,6-Dichlorophenol-indophenol sodium salt hydrate	p.a., ACS	+0.67	blue	colourless	Dissolve 0.02 g in 100 ml water	**HN79.1**	1 g	23,55
						HN79.2	5 g	59,70
						HN79.3	25 g	235,45
Diphenylamine	≥99 %, p.a., ACS	+0.67	blue-violet	colourless	Dissolve 1.0 g in 100 ml of sulfuric acid (96 %)	**9865.1**	25 g	22,05
						9865.2	100 g	53,25
						9865.3	500 g	146,75
Diphenylamine-4-sulphonic acid sodium salt	p.a., ACS	+0.84 in 1 M Sulphuric acid	red-violet	colourless	Dissolve 0.2 g in 100 ml water	**2602.3**	1 g	21,40
						2602.1	10 g	96,65
						2602.2	25 g	170,95
1,5-Diphenyl-carbazide	≥97 %, p.a., ACS	-	colourless	violet	Dissolve 1 g of 1,5-diphenyl-carbazide (DPC) in 100 ml of acetone and acidify with a drop of glacial acetic acid	**2696.1**	10 g	30,65
						2696.2	25 g	52,70
						2696.3	100 g	155,90
2,2'-Dipyridyl	≥95 %, for biochemistry	+1.03	pale blue	red	Dissolve 0.695 g $FeSO_4 \cdot 7\ H_2O$ and 1.171 g 2,2'-dipyridyl in 100 ml water	**4153.1**	5 g	20,35
						4153.2	25 g	62,25
Ferroin indicator solution	for sewage analysis,	1,06	blue	red	ready-to-use	**T131.1**	100 ml	43,55
Ferroin solution	1/40 mol/l (1/40 M) Redox indicator	1,06	blue	red	ready-to-use	**T132.1**	100 ml	50,45
Indigo carmine (C.I. 73015)	for microscopy	+0.29	blue	yellowish	Dissolve 0.05 g in 100 ml of water	**5156.1**	10 g	21,40
						5156.2	25 g	33,25
						5156.3	100 g	80,55
Methylene blue (C.I. 52015)	pure	+0.53 (30 °C)	blue	colourless	Dissolve 0.1–0.5 g in 100 ml of water	**A514.1**	10 g	23,55
						A514.2	50 g	62,25
						A514.3	100 g	107,40
Methylene blue indicator solution	0,01 mol/l in water	+0.53 (30 °C)	blue	colourless	ready-to-use	**9953.1**	100 ml	41,85
Neutral red (C.I. 50040)	p.a.	+0.25	red-violet	colourless	Dissolve 0.3 g in 100 ml of ethanol (70 %)	**T122.2**	1 g	30,00
						T122.1	10 g	90,85
						T122.3	25 g	181,70
Nile blue A (C.I. 51180)	~80 %	+0.41	blue-red	colourless	Dissolve 0.1 g in 100 ml of water	**4377.2**	5 g	22,50
						4377.1	10 g	36,05
						4377.3	25 g	69,80
1,10-Phenanthroline monohydrate	≥99 %, p.a., ACS	+1.14	pale blue	red	Dissolve 0.695 g $FeSO_4 \cdot 7\ H_2O$ and 1.487 g 1,10-phen-anthroline in 100 ml water	**9113.2**	5 g	37,10
						9113.3	25 g	131,70
						9113.1	50 g	235,45
N-Phenylanthranilic acid	≥97 %, p.a.	+0.89	purple-red	colourless	Dissolve 0.1 g in 5 ml of 0.1 M sodium hydroxide solution and make up to 100 ml with water. Alternatively: Dissolve 0.107 g in 20 ml sodium carbonate solution (5 %) and make up to 100 ml water	**9858.1**	25 g	33,25
						9858.2	50 g	57,55
						9858.3	100 g	102,70
Resazurin sodium salt	extra pure		blue	pink	Dissolve 0.1 g in 100 ml water, freshly made	**1H5X.1**	1 g	27,45
						1H5X.2	5 g	76,25
						1H5X.3	10 g	137,10
Safranin O (C.I. 50240)	for microscopy	+0.24	blue-violet (acid), brown (alkaline)	colourless	Dissolve 0.05 g in 100 ml of water	**T129.1**	10 g	53,65

Product name	Purity	Redox potential E_0[V] at pH=0 and 20 °C	Ox. colour	Red. colour	Instructions for use	Art. No.	Pack Qty.	€
Xylene cyanole (C.I. 42135)	for electrophoresis	+1.00	yellow	pink	Dissolve 0.2 g in 100 ml of water	**A513.2**	5 g	31,75
						A513.1	10 g	53,65
						A513.3	25 g	106,45
						A513.4	50 g	188,15

Metal indicators

Product name	Determination of	Instructions for use	Art. No.	Pack Qty.	€
Alizarin red S (C.I. 58005)	Al, B, Ce, Cr, Hf, La, Mo, Zr, Sc, Th, Y	Dissolve 0.1-1 g in 100 ml ethanol (96 %)	**0348.1**	10 g	25,30
			0348.2	25 g	38,60
			0348.3	100 g	123,10
Arsenazo III	Ca	Dissolve 0.1 g in 100 ml water	**KK22.1**	1 g	64,40
			KK22.2	5 g	241,90
Aurin tricarboxylic acid ammonium salt	Al, Ca, Fe(III), Mg	Dissolve 0.2 g in 100 ml water	**2670.1**	10 g	23,55
			2670.2	25 g	35,40
			2670.3	100 g	86,55
Cacotheline	Sn, V, Ca, Fe(III)	Dissolve 0.1 g in 100 ml ethanol (96 %)	**1H42.1**	1 g	20,35
			1H42.2	10 g	69,35
			1H42.3	25 g	114,50
Calcein	Mg, Ba, Ca, Cr, Sr, SO_4^{2-}	Prepare trituration with KNO_3 (1:99)	**7688.1**	5 g	47,20
			7688.2	25 g	138,70
			7688.3	100 g	407,45
Calconcarboxylic acid	Ca	Prepare trituration avec Na_2SO_4 (1:99) or dissolve 0.04 g in 100 ml methanol	**2676.1**	5 g	34,95
			2676.2	10 g	50,00
			2676.3	50 g	134,40
Calconcarboxylic acid indicator solution	Ca	ready-to-use	**1E05.1**	100 ml	80,10
Calmagite	Ca, Mg	Dissolve 0.1 g in 100 ml water	**1H59.1**	5 g	23,15
			1H59.2	10 g	40,35
			1H59.3	25 g	80,55
Chrome azurol S (C. I. 43825)	Al, Ca, Cu, Fe, Mg, Ni, Th	Dissolve 0.1 g in 100 ml water	**1H43.1**	1 g	19,25
			1H43.2	10 g	41,40
			1H43.3	25 g	78,40
Chrome azurol S indicator solution	Al, Ca, Cu, Fe, Mg, Ni, Th	ready-to-use	**1CYY.1**	100 ml	67,20
Chromotrope® 2B (C.I. 16575)	boric acid	Dissolve 0.005 g in H_2SO_4	**7647.1**	5 g	18,85
			7647.2	25 g	33,25
			7647.3	100 g	80,55
Dimethylglyoxim	Ni	Dissolve 0.1 g in 100 ml water	**2677.1**	50 g	54,30
			2677.2	100 g	87,65
			2677.3	500 g	321,45
Dimethylglyoxime disodium salt octahydrate	Ni	Dissolve 0.1 g in 100 ml water	**KK24.1**	25 g	54,30
			KK24.2	50 g	95,70
1,5-Diphenylcarbazide	Cr(VI), Fe, Cd, Hg, Mg	Dissolve 1 g of 1,5-diphenylcarbazide (DPC) in 100 ml of acetone and acidify with a drop of glacial acetic acid	**2696.1**	10 g	30,65
			2696.2	25 g	52,70
			2696.3	100 g	155,90
Diphenylcarbazone	Cd, Hg, In, Mn, Ni, Pb, V	Dissolve 0.2 g in 100 ml ethanol (96 %)	**2678.1**	10 g	79,45
			2678.2	25 g	154,30
			2678.3	50 g	263,40
Dithizone	heavy metal ions	Dissolve 0.025–0.05 g in 100 ml methanol	**2697.1**	5 g	42,90
			2697.2	25 g	137,10
			2697.3	50 g	220,40
Eriochrome black T (C.I. 14645)	Ba, Cd, In, Mg, Mn, Pb, Sc, Sr, Zn, Zr, rare earth metals	Dissolve 0.1 g in water	**0112.1**	25 g	20,35
			0112.2	50 g	36,05
			0112.3	100 g	64,40
	Ba, Cd, In, Mg, Mn, Pb, Sc, Sr, Zn, Zr, rare earth metals	Trituration with NaCl (1:99), ready-to-use	**K860.2**	25 g	26,80
			K860.1	50 g	40,75
			K860.3	100 g	70,45
Eriochrome black T indicator solution	Ba, Cd, In, Mg, Mn, Pb, Sc, Sr, Zn, Zr, rare earth metals	ready-to-use	**1E01.1**	100 ml	57,95
Eriochrome blue black B (C.I. 14640)	Ca, Cd, Mg, U(IV), Zn, Zr	Dissolve 0.2–0.4 g in 100 ml methanol	**7661.1**	5 g	18,85
			7661.2	25 g	33,25
			7661.3	100 g	80,55
Eriochrome blue black R (C.I. 15705)	Al, Ca, Cu, Fe, Ga, Zr	Dissolve 0.4 g in 100 ml methanol or ethanol	**7663.1**	5 g	18,85
			7663.2	25 g	33,25
			7663.3	100 g	80,55
Fast sulphon black F (C.I. 26990)	Cu	Dissolve 0.1 g in 100 ml water	**7685.1**	5 g	20,35
			7685.2	25 g	36,05
			7685.3	100 g	96,65

Product name	Determination of	Instructions for use	Art. No.	Pack Qty.	€
Glyoxal-bis-(2-hydroxyanil)	Ca, Sc, U	Dissolve 0.4 g in 100 ml ethanol	**1LAA.1**	1 g	16,05
			1LAA.2	5 g	34,30
			1LAA.3	10 g	57,55
Hydroxy naphthol blue disodium salt	Ca	Dissolve 0.1 g in 100 ml water	**2556.1**	5 g	25,30
			2556.2	25 g	51,50
8-Hydroxyquinoline	Mg	Dissolve 0.1 g in 100 ml ethanol	**2557.1**	50 g	56,90
			2557.2	100 g	103,75
			2557.3	250 g	231,15
Metal phthaleine	Ba, Ca, Cd, Mg, Sr	Dissolve 0.1 g in dil. NH_3	**4231.1**	1 g	31,10
			4231.2	5 g	61,20
Methylthymol blue sodium salt	Ba, Bi, Ca, Cd, Cu, Fe(II), Hg, In, Mg, Mn, Pb, rare earth metals, Se, Sn(II), Th, Tl(II), Zn, Zr	Prepare trituration with KNO_3 (1:99)	**KK17.1**	1 g	19,90
			KK17.2	5 g	58,60
Morin hydrate	Al, Be, B, Ga, In, Mo, Nb, Sc, Ta, Th, Ti, W, Sn, Zr	Dissolve 0.1 g in 100 ml methanol	**6459.1**	5 g	138,70
			6459.2	50 g	1.177,15
Murexide (C. I. 56085)	Ag, Ca, Co, Cu, Mn, Ni, Sc, Th, Zn	freshly made saturated solution in water	**T124.1**	5 g	33,25
			T124.2	25 g	77,30
			T124.3	50 g	127,95
4-(4-Nitrophenylazo)-1-naphthol	Mg	Dissolve 0.1 g in 100 ml ethanol (96 %)	**1H46.1**	10 g	37,55
			1H46.2	25 g	64,40
			1H46.3	100 g	203,20
4-(4-Nitrophenylazo)-resorcinol	Mg	Dissolve 0.1 g in dil. NaOH	**2563.1**	10 g	34,30
			2563.2	25 g	52,15
1-(2-Pyridylazo)-2-naphthol	Al, Ba, Bi, Ca, Cd, Co, Cu, Fe, Ga, Hg, In, Mg, Mn, Ni, Pb, Sc, Th, Tl, V, Zn	Dissolve 0.01–0.1 g in 100 ml ethanol (96 %)	**KK12.1**	1 g	24,65
			KK12.2	5 g	85,90
4-(2'-Pyridylazo)-resorcinol	Al, Ba, Bi, Cd, Cu, Fe, Hg, In, Mn, Ni, Pb, Sr, Th, Tl(III), Zn, rare earth metals	Dissolve 0.1 g in 100 ml water	**2564.1**	5 g	105,90
			2564.2	25 g	370,90
Pyrocatechol violet	Sn	Dissolve 0.1 g in 100 ml water	**1H5P.1**	1 g	18,20
			1H5P.2	5 g	40,35
			1H5P.3	10 g	68,30
Pyrogallol red	Bi, Co, Ni, Pb	Dissolve 0.05 g in ethanol (96 %)	**0287.1**	1 g	33,25
			0287.2	5 g	66,15
Silver diethyldithiocarbamate	As	Dissolve 0.5 % in pyridine	**KK25.1**	5 g	68,70
			KK25.2	10 g	125,70
Sodium diethyldithiocarbamate trihydrate	Cu	Dissolve 0.1 g in 100 ml water	**2601.1**	25 g	28,95
			2601.2	100 g	52,60
			2601.3	500 g	177,40
Sodium nitroprusside dihydrate	Zn	Dissolve 0.1 g in 100 ml ethanol or water	**HN34.1**	25 g	36,45
			HN34.2	100 g	95,60
			HN34.3	500 g	364,45
5-Sulphosalicylic acid dihydrate	Fe(III)	Dissolve 1.0–5.0 g in 100 ml water	**4119.1**	100 g	23,55
			4119.2	500 g	66,55
			4119.7	1 kg	113,45
Thorin	Bi, Th, U(IV), Sc, Y(III)	Dissolve 0.5 g in 100 ml water	**KK34.1**	5 g	220,40
			KK34.2	10 g	410,15
Thymolphthalein complexon	Ba, Ca, Sr	Dissolve 0.1 g in 100 ml ethanol (96 %)	**1H60.1**	5 g	23,15
			1H60.2	10 g	40,35
			1H60.3	25 g	80,55
Tiron	Fe(III)	Dissolve 2 g in 100 ml water	**7302.1**	10 g	21,40
			7302.2	25 g	33,25
			7302.3	100 g	85,50
Titan yellow (C. I. 19540)	Mg	Dissolve 0.1 g in 100 ml ethanol (20 %)	**7739.1**	5 g	21,00
			7739.2	25 g	37,10
			7739.3	100 g	91,30
Xylenol orange tetrasodium salt	Bi, Cd, Co, Cu, Fe, Hg, In, Pb, Sc, Th, Tl(III), V(V), Zn, Zr, rare earth metals	Dissolve 0.1 g in 100 ml water	**2727.1**	1 g	37,10
			2727.2	5 g	85,50
			2727.3	10 g	137,10
			2727.4	50 g	471,95
Xylidyl blue sodium salt	Mg	Dissolve 0.1 g in 100 ml water	**KK35.1**	1 g	50,45
			KK35.2	5 g	209,65
Zincon	Cu, Zn	Dissolve 0.1 g in 100 ml ethanol (96 %)	**5563.1**	1 g	50,45
			5563.2	5 g	198,90

For additional product data and safety information, see chapter Chemicals A-Z.

			3973.1	25 g	29,60
4-Aminoantipyrine	≥98 %, p.a., ACS	Reagent for phenol detection	**2671.1**	10 g	30,65
			2671.2	25 g	46,15
			2671.3	100 g	81,20
1-Amino-2-hydroxy-4-naphthalenesulfonic acid	≥90 %, p.a., ACS	For determination of phosphate	**2672.1**	25 g	51,10
			2672.2	100 g	130,65
Ammonium benzoate	≥98 %, extra pure	For precipitation of aluminium and iron	**9836.1**	100 g	21,40
			9836.2	500 g	57,55
			9836.3	1 kg	102,70
Azomethine H hydrate	≥95 %, p.a.	Reagent for the determination of boron	**CP99.2**	1 g	25,30
			CP99.1	5 g	79,45
			CP99.3	25 g	306,40
Chromotropic acid disodium salt dihydrate	≥98,5 %, p.a., ACS	Reagents for silver, boron, chrome, mercury, titanium, chromate, formaldehyde, nitrile and nitrate	**KK30.1**	10 g	68,70
			KK30.2	25 g	125,70
1,8-Dihydroxy-2-(4-sulfophenylazo)-naphthalene-3,6-disulfonic acid trisodium salt	p.a., ACS	Reagent for fluoride.	**2605.1**	10 g	34,30
			2605.2	25 g	60,10
4-(Dimethylamino)-benzaldehyde	≥98 %, p.a., ACS	Reagent for the detection of nitrogen containing compounds.	**X867.1**	25 g	55,80
			X867.2	100 g	142,45
5-(4-Dimethylaminobenzylidene)rhodanine	p.a.	Analytical reagent for silver.	**KK23.1**	5 g	37,10
			KK23.2	10 g	62,90
			KK23.3	50 g	252,65
5,5'-Dithio-bis-(2-nitrobenzoic acid)	≥98 %, p.a.	For determination of thiol groups	**6334.1**	1 g	25,30
			6334.2	5 g	73,00
			6334.3	25 g	278,45
Eriochrome cyanine R (C. I. 43820)	extra pure	Reagent for Al	**1H5C.1**	1 g	12,40
			1H5C.2	10 g	28,95
			1H5C.3	25 g	56,45
Hydrazinium sulphate	≥99 %, p.a., ACS	Reducing agent; reagent for separation of Po and Te.	**HN96.1**	100 g	26,35
			HN96.2	500 g	74,75
Isatin	≥98 %, for biochemistry	Reagent for the spectrophotometric determination of thiophene and proline.	**4155.1**	25 g	16,05
			4155.2	100 g	44,65
3-Methyl-2-benzothiazolinone hydrazone hydrochloride	≥98 %, p.a.	Analytical reagent for the qualitative determination of aldehydes.	**8413.1**	10 g	181,70
1-Naphthol	≥99 %, p.a.	Reagent for carbohydrates.	**KK14.1**	50 g	66,55
			KK14.2	100 g	114,50
N-(1-Naphthyl)-ethylenediamine dihydrochloride	≥99 %, p.a.	For the detection of sulphonamide and the determination of nitrite.	**4342.2**	10 g	49,35
			4342.1	25 g	112,90
			4342.3	50 g	209,65
New fuchsin (C. I. 42520)	extra pure	Dye and detection reagent for aldehydes	**1H5E.1**	25 g	28,95
			1H5E.2	50 g	46,15
			1H5E.3	100 g	75,15
Ninhydrin	≥99 %, p.a., ACS	For the detection of amino acids.	**4378.1**	25 g	51,50
			4378.2	100 g	131,70
			4378.3	500 g	504,20
Pararosaniline base (C. I. 42500)	extra pure	Dye and detection reagent for aldehydes	**1H5L.1**	5 g	23,15
			1H5L.2	10 g	40,35
			1H5L.3	25 g	68,30
Phenylhydrazine hydrochloride	≥99 %, p.a.	Reagent for detection of sugar.	**KK20.1**	25 g	24,65
			KK20.2	100 g	66,55
			KK20.3	250 g	149,45
meta-Phosphoric acid	p.a., pieces (hyaline)	Reagent for protein, vitamines, urea and glucose. Stabilised with sodium metaphosphate $(NaPO_3)_n$.	**CN91.1**	100 g	39,25
			CN91.2	250 g	80,55
			CN91.3	500 g	147,85
			CN91.4	1 kg	267,70
Potassium hexacyanoferrate(II) trihydrate	≥99 %, p.a., ACS, ISO	Reagent for the determination of Fe, Cu, Zn, protein. For preparation of Berlin blue.	**P745.1**	500 g	110,20
			P745.2	1 kg	203,20
			P745.3	2.5 kg	456,90
Potassium hexacyanoferrate(III)	≥99 %, p.a., ACS	Oxidizing agent in organic synthesis. Reagent for the determination to Co, Zn and alkaloids.	**P746.3**	100 g	39,70
			P746.1	500 g	139,65
			P746.2	1 kg	267,70
Potassium hexahydroxoantimonate(V)	≥98 %	Reagent for the detection of sodium (precipitation).	**1HEK.1**	100 g	37,55
			1HEK.2	500 g	117,20

Karl Fischer Reagents ROTI®Hydroquant

There are two established Karl Fischer methods of calculating the water content of a substance: Volumetric analysis and coulometric analysis. Which method is chosen depends primarily on the water content that the sample is expected to have. Making the right choice is vital for obtaining reliable and reproducible results. Carl ROTH offers compatible reagents for both of these methods.

Volumetric Reagents

Karl Fischer volumetric analysis is recommended if the water content of a sample ought to be between 0,1 % and 100 %. Volumetric analysis is performed by measuring the amount of Karl Fischer reagent that needs to be added to a substance until the end point of the titration has been reached. In alcoholic solutions, water reacts 1:1 with iodine in the presence of sulphur dioxide. Methanol and sulphur dioxide form an acid ester that is neutralised by the base (e.g. imidazole, hereafter referred to as „RN“ for simplicity).
$CH_3OH + SO_2 + RN \rightarrow [RNH]SO_3CH_3$
In the titration process, iodine is added which reacts with water to be reduced to colourless iodide:
$[RNH]SO_3CH_3 + H_2O + I_2 + 2\ RN \rightarrow [RNH]SO_4CH_3 + 2\ [RNH]I$
This reaction continues until there is no water left. The end point is determined by a change in colour due to a surplus of iodine and measured using a potentiometer.

Single-component Reagents

Single-component reagents contain all the substances required for the Karl Fischer reaction in a single solution. They are easy to use and provide for a high level of flexibility when choosing a solvent for the sample type. The high reactivity of the components means that the titre for single-component reagents must always be determined before titration is carried out. Reactions with standard reagents containing methanol are not possible for samples that contain aldehydes or ketones, as the methanol will react with them to produce extra water in a secondary reaction. Carl ROTH offers methanol-free reagents that are suitable for substances containing aldehydes and ketones.

Single-component Reagents

Product name	Purity	General application	Art. No.	Pack Qty.	€
Karl Fischer ROTI®Hydroquant Working Medium K	for KF titration, for aldehydes and ketones	Solvent component. For use with article number 5211.	**5215.1**	1 l	85,90
Karl Fischer ROTI®Hydroquant C5 K	5 mg H_2O/ml, for KF titration, for aldehydes and ketones	Single-component reagent. For use with article number 5215.	**5211.1**	1 l	203,20
Karl Fischer ROTI®Hydroquant C2	2 mg H_2O/ml, pyridine-free	Single-component reagent. For use with article number T193.	**T194.1**	1 l	160,20
Karl Fischer ROTI®Hydroquant C5	5 mg H_2O/ml, pyridine-free	Single-component reagent. For use with article number T193.	**T190.1**	1 l	181,70
Karl Fischer methanol ROTI®Hydroquant D	for KF titration, dry	Solvent component. For use with article number T194 or T190.	**T193.1**	1 l	38,20
			T193.2	2.5 l	64,40

For additional product data and safety information, see chapter Chemicals A-Z.

Two-components Reagents

In two-component systems, the substances crucial for the reaction are separated, with some in the solvent component and some in the titration component. Separating the substances gives the system a longer shelf life and means that the titre needs to be determined less frequently.

Two-components Reagents

Product name	Purity	General application	Art. No.	Pack Qty.	€
Karl Fischer ROTI®Hydroquant S	for KF titration	Solvent component. For use with article number X947 or T191.	**T192.1**	1 l	64,40
Karl Fischer ROTI®Hydroquant S CM	for KF titration	Solvent component. For use with article number X947 or T191.	**5218.1**	1 l	49,35
Karl Fischer ROTI®Hydroquant T2	2 mg H_2O/ml, pyridine-free	Titrant component. Two-components reagent. For use with article number T192 or 5218.	**X947.1**	1 l	69,80
Karl Fischer ROTI®Hydroquant T5	5 mg H_2O/ml, pyridine-free	Titrant component. Two-components reagent. For use with article number T192 or 5218.	**T191.1**	1 l	77,30

For additional product data and safety information, see chapter Chemicals A-Z.

The volumetric Karl Fischer reagents are suitable for water contents between 0,1 % and 100 %. Free water and water of hydration can be determined, respectively. Our solutions are based on methanol and free of pyridine.

Using single-component reagents:
Add methanol to the reaction vessel and titrate to dryness with the C-component. Then add the sample and titrate again to dryness.

Using two-component reagents:
Add solvent S to the reaction vessel and titrate to dryness with the T-component. Then add the sample and titrate again to dryness.

Table illustrating the uses of Karl Fischer ROTI®Hydroquant volumetric reagents:

Titration components		Solvent components			
		Methanol (T193)	Working medium K (5215)	S (T192)	S CM (5218)
	C2 (T194)	X			
	C5 (T190)	X			
	C5 K (5211)		X		
	T2 (X947)			X	X
	T5 (T191)			X	X

Standards

Water standards with a defined water content are required to determine the titre for the reagents used. Either a solid or a liquid standard can be chosen.

Coulometric Reagents

Karl Fischer coulometric titration is suitable for substances with a low water content (i.e. <0,1 %) and, for example, for expensive substances that can only be examined in small quantities.

In the coulometric titration process, the iodine required is produced directly in situ at the electrode in the reaction vessel through the anodic oxidation of iodide. Hydrogen is produced at the cathode. The measuring cell contains an anode and cathode chamber, which can be separated by a diaphragm. This means that the titration cell can be equipped with diaphragms or be diaphragm-free. Carl ROTH offers suitable reagents for both models.

Water analysis

Carl ROTH offers the essential reagents for your water analysis.
On the following pages you find

- determination of water hardness
- determination of adsorbable organic halogen compounds (AOX)
- determination of chemical oxygen demand (COD)
- determination of biological oxygen demand (BOD)
- potassium permanganate index
- determination of surfactants
- hydrocarbon index

Determination of Water Hardness

Water contains a whole host of salts and other compounds in addition to the gases dissolved in it (oxygen, nitrogen, carbon dioxide). Its most important constituents are magnesium and calcium in the form of their chlorides, sulphates and bicarbonates. These dissolved salts are known as hardeners. The bicarbonates precipitate in the heat (during boiling) as carbonates and are known as carbonate hardness or temporary hardness. The sulphate and chloride compounds are known as permanent hardness or non-carbonate hardness. Total hardness describes the concentration of alkaline earth metal ions in water.
The unit of measurement for water hardness used to be 1 °dH (German degrees of hardness), which corresponds to 10,00 mg CaO or 7,19 mg MgO in one litre of water. Today we use millimoles per litre (mmol/l), whereby 1 °dH corresponds to 0,18 mmol/l of earth metal ions and 1 mmol/l corresponds to 5,6 °dH.

► Measuring set Water hardness see www.carlroth.com

Determination of adsorbable organic halogen compounds (AOX)

AOX (adsorbable organic halogens, where X = Cl, Br, I) is a sum parameter that describes the amount of organic halogen compounds in substances such as water, soil and sewage sludge. This parameter is used primarily in waste water analysis. The method for calculating AOX levels is set out in **DIN EN ISO 9562**. The quantity of organically bound halogens in a water sample is measured using either the shaking method or the column method. In the shaking method, the AOX in a sample are bound to activated carbon by shaking. In the column method, the AOX in a sample are bound to activated carbon by the action of flushing the sample through a glass column filled with activated carbon. The quantity of activated carbon, which is defined precisely in each case, is then burned in an oxygen chamber and the hydrogen halide released is measured by means of argentometry. The amount of fluoroorganic compounds present cannot be measured argentometrically.

Determination of adsorbable organic halogen compounds (AOX)

Determination of chemical oxygen demand (COD)

COD (chemical oxygen demand) is a measure of all the oxidisable components in water under specific conditions. The water sample is mixed with sulphuric acid and heated together with a defined quantity of potassium dichromate, with silver sulphate added as the catalyst. Chloride must be removed beforehand or masked with mercury sulphate. The remaining potassium dichromate is measured by means of titration, using an ammonium iron(II) sulphate solution and ferroin as the indicator. The equivalent amount of oxygen can then be calculated from the amount of potassium dichromate that is used up.

Determination of chemical oxygen demand (COD)

Product name	Purity	General application	Pack.	Art. No.	Pack Qty.	€
Ammonium iron(II) sulphate solution	0,12 mol/l – 0,12 N, volumetric standard solution, for COD determination	According to DIN 38409 part H41.	plastic	**KK60.1**	1 l	59,70

Determination of biological oxygen demand (BOD)

BOD (biochemical oxygen demand) is a measure of the amount of oxygen that microorganisms need to break down the organic material in a water sample over a specific period of time. It is important to calculate the oxygen concentration at the start and end of the measuring time, which is usually five days and is expressed as an index (BOD_5). Chemical, electrochemical or physical methods are used for this calculation.

Determination of biological oxygen demand (BOD)

Determination of the Hydrocarbon Index

The hydrocarbon index is defined as the total of all organic substances that can be extracted with hexane, but cannot be adsorbed in Florisil® (magnesium silicate). On a covalent GC column, these elute between *n*-decane and *n*-tetracontane and have a boiling range of 175–525 °C. These include heating oils, diesel fuels, kerosene, lubricants and transmission fluids. Petrols are not detected using this method. Carl ROTH offers an extensive range of products for the determination of the hydrocarbon index in accordance with **EN ISO 9377-2-Mod. (DIN H53).**

Standards
According to **EN ISO 9377-2-Mod. (DIN H53)**

- Manufactured in accordance with **ISO 17034** in an accredited environment
- Tested in a laboratory accredited to **ISO/IEC 17025**
- Ideal for calibration of GC-FID, GC-TCD, GC-ECD, GC-MS, GC-MS/MS, LC-UV, LC-MS and LC-MS/MS
- With an detailed, batch-related certificate of analysis

Analysis of Food

Carl ROTH also offers reagents suitable for food analysis.
On the following pages, you will find the determination of
• Nitrogen according to Kjeldahl
• Sugar
• Mercury
• Trichinae
• Fat
and the determination of the
• Iodine value
• Acid value
• Peroxide value
• Saponification value
as well as other determining factors such as
• Viscosity
• Density
• Hydroxyl value
• Fluoride ions

Determination of Nitrogen according to Kjeldahl

The most common technique for measuring the amount of nitrogen in organic matter is the Kjeldahl method, which is used in a wide range of sectors such as environmental analysis, food analysis, water analysis and agricultural analysis, as well as in the pharmaceutical and chemical industries. In this traditional method, a precisely weighed sample is broken down using concentrated sulphuric acid, a process which digests its organic contents and reacts nitrogen to form ammonium sulphate.
$(CHNO)_{(s)} \rightarrow CO_{2\,(g)} + SO_{2\,(g)} + H_2O_{\,(g)} + NH_4SO_{4\,(solv,\,H_2SO_4)}$
A catalyst or catalyst mixture consisting of copper, selenium, mercury and/or titanium is added to speed up the reaction. Sodium or potassium sulphate is used to give the sulphuric acid a higher boiling point. If the nitrogen is contained in a nitro, nitroso or azo compound, however, the mixture must be reduced with zinc before digestion takes place.
The nitrogen is now present in the sulphuric acid as ammonium sulphate. Adding a strong base (such as NaOH) neutralises the sulphuric acid and liberates ammonia from the solution.
$NH_4SO_{4\,(solv)} + 2\,NaOH_{\,(aq)} \rightarrow Na_2SO_{4\,(aq)} + 2\,NH_{3\,(g)} + 2\,H_2O_{\,(l)}$
The ammonia is led into an acid (such as boric acid) by means of steam distillation.
$B(OH)_{3\,(aq)} + 2\,H_2O_{\,(l)} + NH_{3\,(g)} \rightarrow B(OH)_4^-{}_{(aq)} + NH_4^+{}_{(aq)}$
The resulting strong base (borate ion) is back-titrated with a strong acid (hydrochloric acid or sulphuric acid). The excess weak boric acid is not captured in the process. A Tashiro's indicator that changes colour in the acid is used for titration. The amount of acid that has been used up can then be converted into the amount of nitrogen in the sample.
$NH_4^+{}_{(aq)} + B(OH)_4^-{}_{(aq)} + HCl_{\,(l)} \rightarrow NH_4Cl_{\,(aq)} + B(OH)_{3\,(aq)} + H_2O_{\,(l)}$
To calculate the protein content of the sample, the varying nitrogen content of the amino acids must be checked and the relevant conversion factors applied. The nitrogen contained in food derives mainly from proteins, but different samples may also contain other sources of nitrogen.

Determination of Sugar

Fehling's test:

Fehling's test is used to identify reducing agents, such as aldehydes and reducing sugars. Combining the two separate solutions (Fehling's I and Fehling's II) produces a deep-blue tartrate-copper(II) complex. Adding a reducing sample then causes a red pigment consisting mainly of copper(I) oxide to precipitate out of the mixture. This change in colour does not happen in the presence of sucrose or ketones.

Product name	Brand/Purity	Synonymous	Pack.	Art. No.	Pack Qty.	€
Fehling's solution I	Reag. Ph. Eur., for sugar determination	Copper(II) sulphate solution	plastic	**N055.1**	1 l	39,25
Fehling's solution II	Reag. Ph. Eur., for sugar determination	Potassium sodium tartrate solution	plastic	**N056.1**	1 l	58,60

Benedict reagent:

As variant for Fehling's test, also for verification of reduced sugars. Due to the different composition, the Benedict reagent is less alkaline and more stable (due to the citrate) than the Fehling solutions.

Product name	Brand/Purity	Pack.	Art. No.	Pack Qty.	€
Benedict's reagent	for sugar determination	dropp. bottle	**0010.1**	100 ml	24,65

Luff-Schoorl method:

This method can be used to calculate the amount of reducing sugars, such as D-glucose, D-fructose, D-lactose and D-maltose, that a sample contains. In this method, the copper(II) ions in an alkaline solution are reduced by the sugar and determined by means of back-titration of the excess reagent added. Non-reducing sugars, such as D-sucrose, are not captured by this method. To determine the amount of this sugar present, it must first be broken down into reducing monosaccharides via acid hydrolysis.

Product name	Brand/Purity	Pack.	Art. No.	Pack Qty.	€
Luff-Schoorl's solution	for sugar determination	plastic	**X874.1**	1 l	42,50

Carrez clarification:

The Carrez clarification technique is used primarily in sugar analysis to eliminate turbidity. Two solutions in equal parts are added to the solution to be clarified, which removes any disruptive colloids.

Product name	Brand/Purity	Synonymous	Pack.	Art. No.	Pack Qty.	€
Carrez solution I	for the determination of sugar and starch	Zinc acetate and acetic acid solution	plastic	**9944.1**	500 ml	46,80
Carrez solution II	for the determination of sugar and starch	Potassium hexacyanoferrate(II) solution	plastic	**9950.1**	500 ml	46,80

For additional product data and safety information, see chapter Chemicals A-Z.

Selivanov's test:

Selivanov's test involves acidifying a sugar solution with concentrated hydrochloric acid, adding an ethanolic resorcinol solution and heating. Ketoses react quickly to form a red-coloured dye, while aldoses do not react at all, or only react slowly.

Product name	Brand/Purity	Pack.	Art. No.	Pack Qty.	€

			5727.4	2.5 kg	317,15

Barfoed's test:

Barfoed's test is used to distinguish monosaccharides from disaccharides, oligosaccharides and polysaccharides. Barfoed's reagent is added to the sugar solution, which is then heated for a few minutes in a water bath. Monosaccharides turn a reddish colour, while disaccharides only react after they have been boiled for a longer period.

Product name	Brand/Purity	Pack.	Art. No.	Pack Qty.	€

			6773.5	25 kg	1.666,25

Molisch's test:

Molisch's reagent is added to a diluted sample of monosaccharide and concentrated sulphuric acid is added down the sides of the test tube to form a layer beneath the solution. A purple ring forms at the interface between the layers. Since nucleic acids and glycoproteins also contain monosaccharides, they may react as well.

Determination of mercury

Mercury has been used in technical applications since ancient times. Its high mobility means that it is particularly prevalent in the environment. Yet huge amounts of it are continuously being released into the atmosphere, for example through combustion reactions. Mercury forms organic compounds that are fat-soluble, which enables them to enter the food chain. The two most commonly used standard methods for analysing mercury are the AAS (atomic absorption spectroscopy) procedure and the ICP (inductively coupled plasma) technique. It goes without saying that the reagents used to prepare samples must not contain mercury. Carl ROTH offers these reagents with a mercury content of less than 0,05 ppm.

Determination of Trichina

Trichina (*Trichinella spp.*) are small roundworms approximately 1 mm long that live as parasites in the skeletal muscles of mammals, birds and reptiles. They can be transferred to a new host (human or animal) through the consumption of raw meat containing infectious larvae in the muscle tissue. Meat intended for human consumption must be inspected in accordance with **Regulation (EU) No. 2075/2005**. Carl ROTH offers reagents suitable for this purpose.

Determination of Fat

Fat analysis is used to determine the fat content and fat composition of foodstuffs. Individual components or total fats levels can be calculated depending on the purpose of testing. Different components are subject to different procedures by law, such as the Gerber method or the Van Gulik technique.

Product name	Brand/Purity	Pack.	Art. No.	Pack Qty.	€

			CN89.5	25 l	319,85

For additional product data and safety information, see chapter Chemicals A-Z.

Fat- and protein-containing samples should be cleared using Carrez reagents:

- Add sample to 60 ml water
- Subsequently add, while mixing after each step:
  a) 5 ml Carrez-I-solution, Art. No. 9944
  (or 7,2 g zinc sulphate heptahydrate, Art. No. K301 ad 100 ml)
  b) 5 ml Carrez-II-solution, Art. No. 9950
  (or 3,6 g potassium hexacyanoferrate(II), Art. No. P745 ad 100 ml)
- Adjust pH to 7,5 - 8,5 by adding NaOH (0,1 M) Art.No. K020
- Fill volumetric flask up to mark, mix, and filter

Iodine Value Determination

The iodine value is a measure of the unsaturated fatty acids in glycerides. The more olefinic double bonds there are in the fat, the higher the iodine value.

For additional product data and safety information, see chapter Chemicals A-Z.

Acid Value Determination

The acid number characterises the acidic components of the fats. For this purpose, the sample is dissolved in a solvent and titrated against phenolphthalein with potassium hydroxide solution. Only free fatty acids are recorded. The fatty acids bound in the glycerides are not determined.

Peroxide Value Determination

The peroxide value of a substance denotes how much peroxide it contains. In a mixture of glacial acetic acid and chloroform, the peroxide oxidises the iodide into elementary iodine. The resulting quantity of iodine is then back-titrated using a thiosulphate solution (where a starch solution is used as the indicator). The blank solution tested in parallel is used to calculate the results.

For additional product data and safety information, see chapter Chemicals A-Z.

Saponification Value

The saponification value denotes the amount of potassium hydroxide required to neutralise free fatty acids and saponify bound fatty acids. The lower the average molar mass of the fat, the higher the saponification value. The sample is heated under reflux in a defined quantity of ethanolic potassium hydroxide solution and the non-used alkaline solution is titrated with hydrochloric acid.

Determination of Viscosity

Viscosity is the measure of a fluid's resistance to flow. The lower a liquid's viscosity, the thinner it is and the more easy it is to pour; the higher a liquid's viscosity, the thicker it is and the harder it is to pour. The particles in viscous liquids are less mobile as they have to overcome the van der Waals forces and the bonds between the particles in them are stronger.

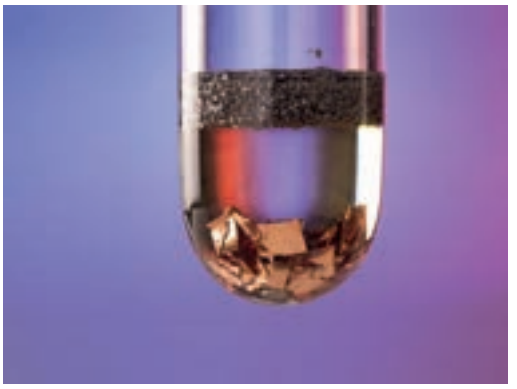
► Viscosity standards can be found on page 633

Hydroxyl Value



The hydroxyl value is a measure of the hydroxy group content of organic materials such as paints, resins, polystyrenes, solvents and lipids. It represents the amount in milligrams of potassium hydroxide required to neutralise the quantity of acetic acid that combines on acetylation of one gram of the substance being tested.

Density determination

Sodium polytungstate (SPT) is perfect for preparation of heavy liquids. Carl ROTH offers an environmentally friendly alternative to using zinc chloride and mercury saline solutions or highly toxic halogenated hydrocarbons to conduct the sink or swim analyses required for density determination.

Properties:

- Highly water soluble
- pH-neutral solution adjustable
- Maximum achievable density of the solution is 3,1 g/cm³ at 25 °C

Advantages:

- Non-toxic
- Non-flammable
- Odourless
- Low viscosity
- Easy to use
- Extremely easy cleaning of the sinking and floating material with water
- Environmentally friendly

Manufacture of aqueous sodium polytungstate solutions with the following densities and consequent viscosities at 25 °C

Mass of SPT used [g]	Mass of H_2O [g]	End volume of solution [ml]	Concentration c in [wt.-%]	Density p [g/cm³]	Viscosity η [mPa•s]

Fluoride Value Determination

In quantitative assays, TISABs (total ionic strength adjustment buffers) are used to set the ionic strength of a solution to a stable level using ion-selective electrodes. The ionic strength must be kept stable during the measuring process in order to prevent the potential from changing regardless of the molar concentration. The measurement of fluoride ions is highly susceptible to error; high pH values or aluminium(III) and iron(III) ions will falsify the results.

TISAB solution I

for fluoride determination

WGK 1

Formulation: Acetic acid, Sodium chloride, tri-Sodium citrate dihydrate, Water.

Further Determination Solutions

NEW / +

Boutron-Boudet's reagent

for determination of water hardness according to Boutron and Boudet

Soap solution to determine the water hardness, 2,4 ml corresponds to 22 °fH (French degrees) = 12,3 °dH (German degrees)

The water hardness according to Boutron-Boudet is determined with various water samples of known and unknown hardness. It is a comparison of the amount of foam on different samples.
HINT: A few drops of the solution are added to 40 ml distilled water and shaken. The samples with known and unknown water hardness are also mixed with the solution drop by drop and shaken until there is the same amount of foam with the same stability as in the distilled water sample. The water hardness can be calculated from this.

Products in VLSI quality

Carl ROTH's VLSI (Very Large Scale Integration) product line offers solvents and acids for cleaning and etching wafers for the semi-conductor industry. Both processes are essential for chip manufacture. Carl ROTH offers a selected range of products.

Solvents

Properties:

- High purity
- Trace metal content generally between 10-50 ppb
- Particle-filtered, maximal 250 particles/ml

Product name	Purity	Art. No.	Pack Qty.	€
Acetone	≥99,5 %, VLSI Grade	**9780.1**	2.5 l	90,85
		9780.2	5 l	153,20
2-Butanone	≥99,5 %, VLSI Grade	**0051.1**	2.5 l	123,10
Isobutyl methylketone	≥99,5 %, VLSI Grade	**0061.1**	2.5 l	95,15
Methanol	≥99,5 %, VLSI Grade	**9785.1**	2.5 l	77,95
		9785.2	5 l	145,15
2-Propanol	≥99,9 %, VLSI Grade	**9781.1**	2.5 l	89,15
		9781.2	5 l	146,75

For additional product data and safety information, see chapter Chemicals A-Z.

Solvents

Properties:

- High purity
- Trace metal content usually below 100 ppb
- Particle-filtered, maximal 250 particles/ml

Product name	Purity	Art. No.	Pack Qty.	€
Hydrochloric acid	37 % fuming, VLSI Grade	**9787.1**	2.5 l	78,40
Hydrogen peroxide	30 %, VLSI Grade	**9790.1**	2.5 l	106,45
ortho-Phosphoric acid	85 %, VLSI Grade	**9788.1**	2.5 l	181,70
Sulphuric acid	96 %, VLSI Grade	**9789.1**	2.5 l	101,60

For additional product data and safety information, see chapter Chemicals A-Z.

VLSI or Very Large Scale Integration means that a large number of transistors (now several 100 million) are located on one chip. Since the gaps are very small, roughly 3 µm, the solvents and acids must be of a correspondingly high purity and be particle-filtered. For VLSI, the number of particles is limited to 250 p/ml.

ROTI®Calipure standards for your calibration needs

Carl ROTH offers an extensive range of calibration and control standards. These products are manufactured from highly pure starting material and are specially tested for each application. The corresponding batch-specific certificate of analysis is available online. Each product series offers excellent value for money.

Melting point standards ROTI®Calipure

The melting point of a substance is the temperature at which the transition from a solid phase to a liquid phase occurs. The determination of melting point is a quick and easy method of determining the basic purity of substances. As the melting point is a characteristic variable for pure substances, it is also used for the identification of organic compounds. Carl ROTH offers a selected range of melting point standards. To allow easy handling and ensure maximum safety, the standards are filled in small quantities protected from light and are ready-to-use straight away.

Properties:

- Suitable for checking purity
- Max. measurement inaccuracy ±0.3 °C
- Suitable for use independent of instrument type
- *Ready-to-use*

ready-to-use

Melting point standards

Product name	Purity	Art. No.	Pack Qty.	€
4-Acetylbenzonitrile	melting point standard 56–59 °C	**2902.1**	1 g	85,90

Density standards ROTI®Calipure

Our Density standards are made of high-quality reagents and are tested by Bingham Pycnometer. They can be used with any brand or type of density measuring instrument. The batch specific Certificates of Analysis are available online.

Properties:

- No toxic metals are used in the products
- Calibration standard for density measurement by pycnometric, vibrational or hydrometer based techniques
- Usable with any brand or type of density measuring instrument
- Consistently high quality from batch to batch
- For testing of Density or Relative Density

For additional product data and safety information, see chapter Chemicals A-Z.

Viscosity standards ROTI®Calipure

Our viscosity standards are manufactured from high-quality reagents and tested using Ubbelohde Master Viscometers. All standards are tested for kinematic viscosity (mm²/s, cSt) as well as dynamic viscosity (mPa·s, cP) and density (g/ml) at different temperatures up to 100 °C. They can be used for calibration, control, verification, qualification or method validation of kinematic and dynamic viscosity. The batch specific Certificates of Analysis are available online.

Viscosity Standards ROTI®Calipure

Product name	Purity	Pack.	Art. No.	Pack Qty.	€

For additional product data and safety information, see chapter Chemicals A-Z.

Redox Standards ROTI®Calipure

Carl ROTH offers you a comprehensive portfolio of redox standards, which are produced from high-quality reagents and tested with an Ag/AgCl (3 M KCl) reference electrode. They can be used as control standards and thus check the functionality of the electrodes and measuring instruments.
The standards are temperature-dependent, so it is important to ensure the correct temperature for the control. The corresponding temperature/redox table can be found on the labels and the batch-specific Certificates of Analysis available online. The batch values are within a very small deviation from the nominal value (±5 mV).

Colour Standards Pt/Co ROTI®Calipure

The platinum-cobalt colour scale (Pt/Co for short) or APHA-Hazen colour scale is used for colour assessment of almost water-clear solutions. It is defined as mg platinum per 1 l solution. The samples are compared colorimetrically against the corresponding standard solution.
Our Pt/Co (Hazen) colour standards are prepared from high-quality reagents by weighing (weight %) according to ASTM D 1209. The standards are checked by means of a spectrophotometer. The batch specific Certificates of Analysis are available online.

Properties:

- Calibration and/or quality control standard
- Consistently high quality from batch to batch
- *Ready-to-use*

Colour Standards according to Ph.Eur. ROTI®Calipure

The European Pharmacopoeia (Ph.Eur.) specifies the visual colour comparison method in chapter 2.2.2. In this method, 5 further colour reference solutions are prepared from the 3 primary solutions red, yellow and blue with 1 % hydrochloric acid. Carl ROTH offers you both the primary solutions and the ready-mixed colour reference solutions yellow, greenish-yellow, brownish-yellow, brown and red.
Our colour standards according to Ph.Eur. are prepared from high-quality reagents by weighing (weight %). The standards are checked by means of a spectrophotometer. The batch specific Certificates of Analysis are available online.

Properties:

- Consistently high quality from batch to batch
- *Ready-to-use*

	ROTI®Calipure Reag. Ph. Eur., standard solution yellow	**1HC0.1**	100 ml	188,15

For additional product data and safety information, see chapter Chemicals A-Z.

Colour Standards according to ASTM ROTI®Calipure

Our ASTM colour standards are prepared from high-quality reagents by weighing (weight %) according to ASTM D 1500. The standards are checked by means of a spectrophotometer. The batch specific Certificates of Analysis are available online.

Properties:

- Calibration and/or quality control standard
- Consistently high quality from batch to batch
- *Ready-to-use*

NEW / +

For additional product data and safety information, see chapter Chemicals A-Z.

Colour Standards according to Gardner ROTI®Calipure

The light yellow Gardner colour numbers 1-8 are based on potassium chloroplatinate solutions, the colour numbers 9-18 on iron(III) chloride, cobalt(II) chloride and hydrochloric acid solutions. They can be used to determine the colour number of similarly coloured liquids, such as vegetable oils or mineral oils.
Our colour standards according to Gardner are prepared from high-quality reagents by weighing (weight %). The standards are checked by means of a spectrophotometer. The batch specific Certificates of Analysis are available online.

Properties:

- Calibration and/or quality control standard
- Consistently high quality from batch to batch
- *Ready-to-use*

pH-Buffer Solutions, ROTI®Calipure, ready-to-use

Properties:

- Manufactured from high purity buffer substances
- No need for time-consuming drying and weighing of reagents
- The buffer solutions are adjusted to their respective pH values by comparison with standard buffer solutions (according to DIN 19266 and based on primary reference materials of the NIST)
- Quick and precise calibration of measuring equipment
- Stabilised against algae and bacterial action
- The batch specific Certificates of Analysis are available online

ready-to-use

pH buffer solution ROTILABO® in sachets

The quantity of reagent contained in a sachet (25 ml) is sufficient for a single calibration.

- Traceable thanks to comparison with standard references from the National Institute of Standards and Technology (NIST) and the National Metrology Institute of Germany (PTB)
- With certificate of analysis for documenting the quality, traceability and accuracy

ROTI®Star Standards for AAS and ICP

Carl ROTH has an extensive range of products which meets the highest standards of quality in the field of element standards and ion standards. The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by AAS and ICP. All solutions are certified and can be traced to NIST standard reference materials. Solutions are produced according to **ISO 17034** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.

Single Element Standards for AAS

(Atomic Absorption Spectroscopy)

AAS standard solutions are made from high-quality reagents, and therefore ensure maximum precision during calibration. Accuracy and precision for reliable measurement results.

Properties:

- Concentration 1000 mg/l (1 g/l)
- Container sizes: 100 ml and 500 ml
- 24 months shelf life for unopened bottle & 12 months after the bottle has been opened

ready-to-use

Multi-Element Standards for Graphite Furnace AAS

This multi-element standard is produced from ultra-pure raw materials and in accordance with strict quality guidelines. The traceability and standard reference material of the NIST is documented on the comprehensive certificate of analysis. The standard is suitable for the calibration of graphite furnace AAS units.

ready-to-use

Matrix Modifer Solutions for Graphite Furnace AAS

Matrix modifier solutions by Carl ROTH are made from high purity starting materials (≥99,999 %) and delivered with a detailed batch specific certificate of analysis. The solutions can be used either diluted or as mixtures, and are suitable for eliminating matrix effects in graphite furnace AAS.

Properties:

- Up to 70 measured trace impurities in ppm range and lower
- Guaranteed accuracy: ±1 %
- Container size: 50 ml

	5 g/l	1 % HNO_3	**5144.1**	50 ml	332,20
	10 g/l	1 % HNO_3	**4842.1**	50 ml	618,15
Palladium nitrate & Magnesium nitrate matrix modifier solution	2 g/l & 10 g/l	1 % HNO_3	**5139.1**	50 ml	278,45

For additional product data and safety information, see chapter Chemicals A-Z.

Single Element Standards for ICP-OES

(Inductively Coupled Plasma – Optical Emission Spectrometry)

The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by AAS and ICP. All solutions are certified and can be traced to NIST standard reference solutions (excluded: iridium, osmium and ruthenium). Solutions are produced according to **ISO 17034** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis. Each standard solution is made of high purity starting materials (mostly ≥99,999 %), and its content is determined gravimetrically and by ICP. High quality acids (purified by subboiling distillation) and water are used for production of the solutions. This gives you first-class reference materials of the highest purity and quality.

- 68 single element standards
- Concentration 1000 mg/l (1 g/l) and 10 000 mg/l (10 g/l)
- Up to 70 measured trace impurities in the ppt range
- 24 months shelf life for unopened bottle & 12 months after the bottle has been opened

ready-to-use New size

Single Element Standards for ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry)

Element	Purity	Matrix	Art. No.	Pack Qty.	€
Aluminum (Al)	1 000 mg/l Al	2 % HNO_3	**2397.1**	100 ml	68,70
			2397.2	500 ml	146,75
	10 000 mg/l Al	2 % HNO_3	**2488.1**	100 ml	122,05

For additional product data and safety information, see chapter Chemicals A-Z.

Multi Element Standards for ICP-OES

(Inductively Coupled Plasma – Optical Emission Spectrometry)

All solutions are certified and can be traced to NIST standard reference solutions. Solutions are produced according to **ISO 17034** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis. A series of mixtures of different element combinations and concentrations for standard environmental analyses.

Properties:

- Quality control standards
- Surface water analysis (Art.No. 2642)
- Sewage sludge analysis (Art.No. 2643)
- 12 months shelf life for unopened bottle & 6 months after the bottle has been opened

ready-to-use NEW/+

Multi Element Standards for ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry)

Product name	Number of elements	Composition	Matrix	Art. No.	Pack Qty.	€
ICP Multi-Element Standard Solution I (19 elements, concentration in mg/l)	19	Ag (50), Al (100), B (15), Ba (5), Be (1), Bi (200), Cd (20), Co (20), Cr (25), Cu (20), Fe (15), Ga 150), In (200), Mn (5), Ni (50), Pb (200), Sr (1), Tl (400), Zn (20)	5 % HNO_3	**2636.1**	100 ml	203,20
ICP Multi-Element Standard Solution III (4 elements, 1000 mg/l)	4	Ba, Ca, Mg, Sr	2 % HNO_3	**2637.1**	100 ml	192,45
ICP Multi-Element Standard Solution IV (23 elements, 1000 mg/l)	23	Ag, Al, B, Ba, Bi, Ca, Cd, Co, Cr, Cu, Fe, Ga, In, K, Li, Mg, Mn, Na, Ni, Pb, Sr, Tl, Zn	2 % HNO_3	**2638.1**	100 ml	353,70
ICP Multi-Element Standard Solution VIII (24 elements, 100 mg/l)	24	Al, B, Ba, Be, Bi, Ca, Cd, Co, Cr, Cu, Fe, Ga, K, Li, Mg, Mn, Na, Ni, Pb, Se, Sr, Te, Tl, Zn	2 % HNO_3	**2639.1**	100 ml	338,65
ICP Multi-Element Standard Solution IX (9 elements, 100 mg/l)	9	As, Be, Pb, Cd, Cr, Ni, Hg, Se, Tl	2 % HNO_3	**2640.1**	100 ml	203,20
ICP Multi-Element Standard Solution X (23 elements, concentration in mg/l)	23	Ca (35000), Mg (15000), Na (8000), K (3000), B (100), Fe (100), Mo (100), Sr (100), As (50), Ba (50), Ni (50), V (50), Zn (50), Mn (30), Co (25), Pb (25), Be (20), Cd (20), Cr (20), Cu (20), Bi (10), Se (10), Tl (10)	2 % HNO_3	**2642.1**	100 ml	327,35

Multi Element Standards for ICP-MS

(Inductively Coupled Plasma – Mass spectrometry)

The standard solutions are manufactured from high-purity starting material (usually ≥99,999 %) under clean room conditions.
Acids (purified by means of sub-boiling distillation) and water of highest quality are used to manufacture the solutions.
The solutions are certified and can be traced to NIST standard reference solutions. Solutions are produced according to **ISO 17034** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.
The range encompasses different multi-element standards in various compositions for tuning, calibration and interference tests.

ROTIPURAN® Ultra/Supra

Acids, Alkaline Solutions and Water for trace analysis via ICP-OES, ICP-MS, AAS and IC

Carl ROTH provides two high quality product lines, ROTIPURAN® Ultra & Supra specially for research, trace analysis and electronics. These ultrapure reagents are produced using a technologically complex distillation process (subboiling distillation) and are filled only into specially selected, suitable containers under clean room conditions. Very extensive production and quality controls guarantee extremely high quality.

ROTIPURAN® Ultra

This ultrapure product line is characterised for its especially high purity (in ppt-quality) and fulfils the highest purity requirements. The metal content of these products is below 100 ppt [parts per trillion=10^{-12}] while key metals are under 10 ppt. These products are used in ultra trace analysis (via ICP-OES, ICP-MS, AAS, IC) and for applications in the electronics industry. The reagents are bottled and offered in high class fluoropolymer plastic bottles (PFA and FEP).

Features:

- Specified metal content: less than 100 ppt
- Preponderant metals are under 10 ppt
- More than 65 analysed metals
- Produced and bottled under clean room conditions
- Continuous process control for highest product purity
- Bottled exclusively in purified fluoropolymer bottles
- Highest purity and maximum product safety

ROTIPURAN® Supra

This supra quality line (**ppb-quality**) is perfectly suitable for sample preparation in trace analysis (e.g. via ICP-OES, AAS, IC, etc.). Over 60 elements are specified and their content is below 1 ppb [parts per billion =10^{-9}]. Bottled and delivered in special plastic bottles.

Features:

- Maximum metal contamination: <1 ppb
- 60 specified metals
- Produced and filled under clean room conditions
- Bottled in special lightweight bottles for greater safety and easier handling. 2,5 liter bottles have got a handle
- HF is delivered with additional drop spout for safe handling
- Extremely economical purity for most analytic applications

Dispenser Ultra / Ultra HF

For dispensing highly pure acids and alkalis.
Suitable for use in ultra trace analysis.

General features of all models:

- **Free of metals**
- Made of high quality and highly pure plastics (PTFE, TFM and PFA)
- Calibrated and mechanically tested for precision and accuracy
- 38-430 thread (fits ROTIPURAN® Ultra products)

When using bottles with a GL45 thread, please order fastening for dispenser KK11.1 separately.

Dispenser Ultra

ROTH SELECTION.

Properties:

- Acid cleansed
- Manufactured in cleanroom (class 100)

Volume (ml)	Graduation (ml)	Tolerance (ml)	Art. No.	Pack Qty.	€
0,5–5	0,5	±0,02	**KK97.1**	1 unit(s)	3.601,25

Dispenser Ultra HF

ROTH SELECTION.

Properties:

- Specially for dispensing hydrofluoric acids
- Also suitable for analytical acids

Volume (ml)	Graduation (ml)	Tolerance (ml)	Art. No.	Pack Qty.	€
0,5–5	0,5	±0,02	**KK98.1**	1 unit(s)	2.843,40

Accessories for Ultra/Ultra HF dispensers

Accessories Bottle holder for Ultra/Ultra HF dispensers

ROTH SELECTION.

Stabilises bottles when using a dispenser. The four-screw system is suitable for both square bottles and round bottles. The bottle holder is designed for ROTIPURAN® Supra and Ultra bottles with capacities from 250 ml to 2 litres. Also suitable for bottles with a diameter from approx. 7.0 cm to 11.5 cm.

Version	Art. No.	Pack Qty.	€
Bottle holder	**KK99.1**	1 unit(s)	147,85

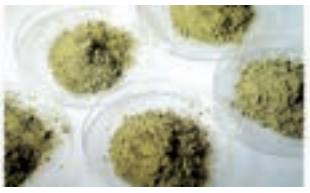
Accessories Adapter to GL 45 for Ultra/Ultra HF dispensers

ROTH SELECTION. Material: PTFE.

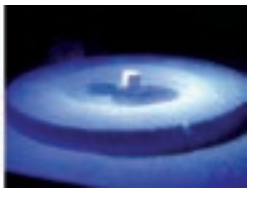
For bottles with GL45 thread, specially for the use of ROTIPURAN® Supra products with Ultra and Ultra HF dispensers.

Version	Art. No.	Pack Qty.	€
Adapter	**KK11.1**	1 unit(s)	418,20

ROTI®METIC (Metal Inorganic Compounds)



Ultra Pure Metals and Inorganic Compounds



The ROTI®METIC product range comprises more than 180 high purity inorganic metals and metal compounds with purity levels ranging from 99,9 % (3N) to 99,9999 % (6N). Modern production technology as well as high quality and safety standards make it possible to achieve these high purity levels of metal traces from 100 ppm to 1 ppm. Up to 60 trace metal compounds are analysed by HR-ICP, ICP-OES, AA, GD-MS and documented in the batch specific certificate of analysis supplied with the product. Our ultra high purity metals and metal compounds are ideal for the following applications:

- Instrumental analytics
- Chemical analyses & syntheses
- Crystal growth technology
- Nanotechnology
- Laser and Photovoltaic technology
- Optical fibres
- Photonics
- Fuel cells
- Catalysis

Our mission is to offer the quality and service you require in research & development and in production. Excellent value for money and the option of ordering in semi-bulk are strong arguments in favour of the ROTI®METIC product range.

Ultra Pure Metals and Inorganic Compounds

Product name	Purity	CAS No.	Art. No.	Pack Qty.	€
Aluminium granulate	99,995 % (4N5)	7429-90-5	**5577.1**	25 g	60,75
			5577.2	100 g	163,95
Aluminium chloride hexahydrate	99,9999 % (6N)	7784-13-6	**5368.1**	25 g	127,95
			5368.2	100 g	471,95
Aluminium fluoride	99,99 % (4N), anhydrous	7784-18-1	**5395.1**	10 g	113,45
			5395.2	50 g	396,70
Aluminium nitrate nonahydrate	99,999 % (5N)	7784-27-2	**5567.1**	10 g	54,75
			5567.2	50 g	157,50
Aluminium oxide	99,995 % (4N5)	1344-28-1	**5575.1**	5 g	54,75
			5575.2	25 g	149,45
Aluminium sulphate	99,99 % (4N)	10043-01-3	**1L4Y.1**	5 g	73,00
			1L4Y.2	25 g	209,65
Ammonium bromide	99,999 % (5N)	12124-97-9	**1L5E.1**	5 g	54,30
			1L5E.2	25 g	169,35

Product name	Purity	CAS No.	Art. No.	Pack Qty.	€
Ammonium carbonate	99,999 % (5N)	506-87-6	**1L58.1**	10 g	70,45
			1L58.2	50 g	169,35
Ammonium chloride	99,999 % (5N)	12125-02-9	**5050.1**	50 g	145,15
			5050.2	100 g	241,90
Ammonium dihydrogen phosphate	99,999 % (5N)	7722-76-1	**5580.1**	25 g	70,45
			5580.2	100 g	161,80
Ammonium hexachlororhodate(III)	99,995 % (4N5)	15336-18-2	**5586.1**	1 g	676,20
Ammonium hexafluorosilicate	99,999 % (5N)	16919-19-0	**5587.1**	10 g	80,10
			5587.2	25 g	157,50
			5587.3	50 g	274,15
Ammonium hydrogen fluoride	99,999 % (5N)	1341-49-7	**5363.1**	25 g	149,45
di-Ammonium hydrogen phosphate	99,999 % (5N)	7783-28-0	**5596.1**	100 g	310,70
Ammonium iodide	99,999 % (5N)	12027-06-4	**1L79.1**	5 g	103,75
			1L79.2	25 g	377,90
Ammonium iron(II) sulphate hexahydrate	99,999 % (5N)	7783-85-9	**1L75.1**	5 g	83,35
			1L75.2	25 g	254,25
Ammonium molybdate(VI)	99,99 % (4N)	13106-76-8	**5591.1**	5 g	60,75
			5591.2	25 g	205,90
Ammonium monovanadate	99,995 % (4N5)	7803-55-6	**5590.3**	1 g	32,80
			5590.2	25 g	532,15
Ammonium perrhenate	99,999 % (5N)	13598-65-7	**1L6P.1**	1 g	80,55
			1L6P.2	5 g	335,95
Ammonium sulphate	99,999 % (5N)	7783-20-2	**5606.1**	10 g	39,70
			5606.2	50 g	107,40
Ammonium tetraborate tetrahydrate	99,999 % (5N)	12228-87-4	**5396.1**	25 g	132,80
Ammonium tetrachloroaurate(III) hydrate	99,999 % (5N)	13874-04-9	**1L6Y.1**	1 g	286,50
Ammonium tetrachloroplatinate(II)	99,99 % (4N)	13820-41-2	**1L6E.1**	1 g	254,25
Ammonium tetrathiomolybdate	99,99 % (4N)	15060-55-6	**5608.1**	1 g	54,30
			5608.2	5 g	104,85
Antimony shot	99,999 % (5N)	7440-36-0	**4516.2**	50 g	254,25
Antimony(III) oxide	99,999 % (5N)	1309-64-4	**1L6T.1**	5 g	54,75
			1L6T.2	25 g	181,70
Antimony(V) oxide	99,999 % (5N)	1314-60-9	**1L5A.1**	5 g	62,25
			1L5A.2	25 g	238,15
Barium carbonate	99,999 % (5N)	513-77-9	**5321.1**	25 g	163,95
			5321.2	100 g	518,70
Barium chloride	99,999 % (5N), anhydrous	10361-37-2	**5051.1**	25 g	132,80
Barium chloride dihydrate	99,999 % (5N)	10326-27-9	**5115.3**	25 g	194,05
			5115.1	50 g	217,70
			5115.2	100 g	303,70
Barium fluoride	99,995 % (4N5)	7787-32-8	**5055.1**	25 g	169,35
Barium nitrate	99,9995 % (5N5)	10022-31-8	**5138.1**	50 g	201,60
			5138.2	100 g	352,10
Barium sulphate	99,99 % (4N)	7727-43-7	**1L70.1**	5 g	51,10
			1L70.2	25 g	203,75
Beryllium acetate basic	99,999 % (5N)	19049-40-2	**5612.1**	5 g	64,00
			5612.2	25 g	224,70
Bismuth pieces	99,999 % (5N)	7440-69-9	**1L6H.1**	10 g	103,75
Bismuth(III) oxide	99,999 % (5N)	1304-76-3	**1L6X.1**	10 g	46,15
			1L6X.2	50 g	144,60
Boric acid	99,999 % (5N)	10043-35-3	**5614.1**	25 g	71,50
			5614.2	100 g	176,85
Cadmium acetate	99,999 % (5N), anhydrous	543-90-8	**5247.1**	10 g	122,05
			5247.2	25 g	205,90
Cadmium oxide	99,995 % (4N5)	1306-19-0	**1L63.1**	5 g	45,70
			1L63.2	25 g	113,45
Cadmium sulphate	99,995 % (4N5)	10124-36-4	**1L74.1**	5 g	80,10
			1L74.2	25 g	292,95
Caesium carbonate	99,995 % (4N5)	534-17-8	**5618.1**	5 g	46,15
Caesium chloride	99,999 % (5N)	7647-17-8	**5061.1**	10 g	85,50
			5061.2	50 g	210,20
Caesium nitrate	99,999 % (5N)	7789-18-6	**4505.1**	10 g	127,95
			4505.2	50 g	461,20
Caesium sulphate	99,99 % (4N)	10294-54-9	**1L77.1**	10 g	70,45
			1L77.2	50 g	170,95
Calcium carbonate	99,999 % (5N)	471-34-1	**5616.1**	5 g	60,75
			5616.2	25 g	198,35
Calcium chloride	99,999 % (5N)	10043-52-4	**1L72.1**	1 g	73,00
			1L72.2	10 g	238,15
Calcium chloride hydrate	99,999 % (5N)	22691-02-7	**5056.1**	10 g	161,80
Calcium fluoride	99,99 % (4N)	7789-75-5	**1L59.1**	5 g	192,45

High Purity

Product name	Purity	CAS No.	Art. No.	Pack Qty.	€
Calcium nitrate hydrate	99,999 % (5N)	35054-52-5	**5058.1**	5 g	70,45

ROTI®REMETIC

Rare Earth Metal Inorganic Compounds

Our ultra high purity rare earth metal compounds work excellent for:

- Instrumental analytics
- Chemical analyses & syntheses
- Crystal growth technology
- Catalysis
- Doping agents
- Luminescent & fluorescent compounds
- Glas fibre technology
- Laser technology
- Fuel cells
- Oxidizing agents
- Electronic industry
- Ceramic manufacturing

Our mission is to offer the quality and service you require in research & development and in production. Excellent value for money and the option of ordering in semi-bulk are strong arguments in favour of the ROTI®REMETIC product range.

Ultra-high-purity metals compounds

Purity refers to TREO (Total Rare Earth Oxides).

For additional product data and safety information, see chapter Chemicals A–Z.
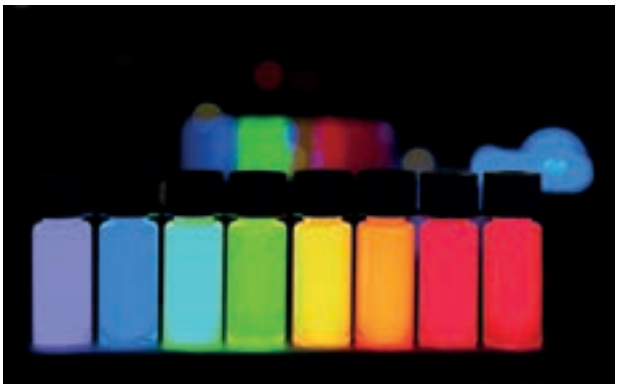
For information on handling nanomaterials, see the WHO homepage.

Phosphonic acids



Alkylphosphonic acids are perfect hydrophobization ligands, owing to their classical bifunctional chemical structure. They contain an non-polar organic hydrophobic alkyl chain and an active hydrophilic phosphonic acid group. These molecules are capable to strongly bind to the surface of different inorganic materials (SiO_2, Al_2O_3, TiO_2, Fe_xO_y, ZrO_2, ZnS etc.) forming a selfassembled coating layer. Phosphonic acids can also be used as ligands for the synthesis of nanoparticles to control the size and hydrophobic properties of the particles. Further they are well soluble in non-polar and many polar solvents. The acids are also soluble in water (especially upon addition of alkali) at lower concentrations.

Phosphonic acids suitable for the production and modification of nanoparticles

Product name	Art. No.	Pack Qty.	€
Hexadecylphosphonic acid	**8466.1**	1 g	42,90
	8466.2	5 g	160,75
Octadecylphosphonic acid	**8468.1**	1 g	67,65
	8468.2	5 g	278,45
Tetradecylphosphonic acid	**8465.1**	1 g	45,70
	8465.2	5 g	160,20

For additional product data and safety information, see chapter Chemicals A–Z.

Quantum Dots (QD)

Quantum dots are fluorescent nanoparticles of certain semiconducting materials, whose electronic properties closely depend on the size of the particles. The fluorescence wavelength shifts towards red for larger particles, and to blue for the smaller ones. This allows coverage of the complete visible colour spectrum with quantum dots of different sizes and yet the same material. The possibility to control the size of the particles during their manufacturing, allows to precisely adjust their electronic and fluorescent properties. The inorganic nature of quantum dots makes them far more stable than organic fluorescent dyes. Moreover, the surface of quantum dot particles is modified with carboxylic groups, which makes them highly soluble in water and enables covalent conjugation with proteins and other molecules.

Quantum Dots, hydrophilic

Product name	Purity	Art. No.	Pack Qty.	€

C

Carbon

Product name	Purity	Art. No.	Pack Qty.	€
Graphite	natural, amorphous	**7614.2**	500 g	21,40
		7614.3	1 kg	32,15
		7614.1	3 kg	58,60

Cr

Chromium

Product name	Purity	Art. No.	Pack Qty.	€
Chromium shot	≥99,95 %	**0886.1**	10 g	40,75
		0886.2	25 g	88,05
		0886.3	50 g	160,20
		0886.4	100 g	289,20

For additional product data and safety information, see chapter Chemicals A–Z.

Co

Cobalt

Product name	Purity	Art. No.	Pack Qty.	€
Cobalt powder	99,999 % (5N)	**5620.1**	5 g	118,80
		5620.2	25 g	376,25

For additional product data and safety information, see chapter Chemicals A–Z.

Cu

Copper

Product name	Purity	Art. No.	Pack Qty.	€
Copper foil	p.a.	**1KNE.1**	250 g	49,35
		1KNE.2	1 kg	127,95
		8540.1	250 g	46,15
		8540.2	1 kg	117,20
Copper beads	≥99,9 %	**2728.1**	100 g	51,10
Copper, nano	≥99 %, ≥80 nm	**8279.1**	5 g	55,40
		8279.2	25 g	222,00
		8279.3	100 g	805,20
Copper pellets	99,999 % (5N)	**5621.1**	25 g	74,75
		5621.2	100 g	182,25
Copper powder	99,999 % (5N)	**5386.1**	10 g	176,85
		5386.2	50 g	755,20
	≥99,7 %, p.a., <63 µm	**CP21.1**	100 g	21,40
		CP21.2	500 g	68,70
Copper wool	~99 %	**9597.1**	100 g	23,55
		9597.2	250 g	42,90
		9597.3	500 g	75,15
		9597.4	1 kg	145,15

Ga

Gallium

Product name	Purity	Art. No.	Pack Qty.	€
Gallium	99,9999 %	**3761.1**	5 g	96,65
	99,99 %	**1HN8.1**	5 g	32,15
		1HN8.2	10 g	53,65
		1HN8.3	25 g	107,40

Ge

Germanium

Product name	Purity	Art. No.	Pack Qty.	€
Germanium pieces	99,999 % (5N)	**1L54.1**	1 g	46,15
		1L54.2	5 g	153,20

Au

Gold

Product name	Purity	Art. No.	Pack Qty.	€
Gold shot	99,999 % (5N)	**5622.1**	1 g	493,45
		5622.2	5 g	2.338,15
	≥99,95 %, 1–6 mm	**0882.1**	1 g	246,20
		0882.2	5 g	1.030,95
Gold leaf		**7605.1**	25 sheet	170,95

In

Indium

Product name	Purity	Art. No.	Pack Qty.	€
Indium wire	99,99 %, Ø 0,5 mm	**1HN9.1**	25 cm	24,65
		1HN9.2	50 cm	37,10
		1HN9.3	1 m	62,25
Indium foil	99,99 % (4N)	**9803.1**	1 unit(s)	349,40
Indium shot	99,999 % (5N)	**5629.1**	5 g	74,10
		5629.2	25 g	249,95
Indium granules	>99,97 %	**3906.1**	10 g	64,40
Indium powder	≥99 %, p.a.	**1EHP.1**	5 g	56,45
		1EHP.2	25 g	209,65

I

Iodine

Product name	Purity	Art. No.	Pack Qty.	€
Iodine	≥99,8 %, p.a., ACS, resublimated	**X864.1**	100 g	88,05
		X864.2	250 g	160,20
		X864.3	1 kg	564,40
	≥99,5 %, Ph. Eur., resublimated	**7935.3**	100 g	67,65
		7935.1	250 g	145,15
		7935.2	1 kg	514,95
	≥99,5 %, resublimated	**7335.1**	250 g	112,90
		7335.2	500 g	203,20
		7335.3	1 kg	385,95
		7335.4	2.5 kg	747,15

Fe

Iron

Product name	Purity	Art. No.	Pack Qty.	€
Iron foil	99,99 % (4N)	**0540.1**	1 unit(s)	134,40
		0540.2	5 unit(s)	568,70
Iron granules	99,99 % (4N)	**5631.1**	5 g	49,35
		5631.2	25 g	160,20
Iron powder	≥99,5 %, p.a., ~10 µm	**3718.3**	100 g	28,95
		3718.1	250 g	56,90
		3718.4	1 kg	153,20
		3718.2	2.5 kg	321,45
Iron powder reduced	≥96 %, extra pure, <149 µm	**9454.1**	250 g	22,50
		9454.2	1 kg	56,90
		9454.3	2.5 kg	107,40
Iron wool	~97 %	**9588.1**	100 g	14,95
		9588.2	250 g	25,70

Pb

Lead

Product name	Purity	Art. No.	Pack Qty.	€
Lead foil	≥99,8 %	**1HEC.1**	10 cm	23,15
		1HEC.2	20 cm	34,30
		1HEC.3	50 cm	57,55
Lead granulate	≥99,9 %, ~20 mesh	**2734.1**	50 g	55,80
		2734.2	100 g	94,50
Lead wool	~99 %, fine	**2248.1**	250 g	28,95
		2248.2	500 g	41,85
		2248.3	1 kg	69,35
		2248.4	2.5 kg	134,40

Li

Lithium

Product name	Purity	Art. No.	Pack Qty.	€
Lithium	≥99,5 %, Ø 70 mm, h: 55 mm	**1HEA.1**	100 g	671,90

Mg

Magnesium

Product name	Purity	Art. No.	Pack Qty.	€
Magnesium ribbon	≥99,5 %	**4468.1**	1 roll(s)	120,95
Magnesium turnings	≥99,9 %, for synthesis, acc. to Grignard	**AE61.1**	250 g	21,40
		AE61.2	500 g	34,30
		AE61.3	1 kg	55,80
Magnesium granulate	99,99 % (4N)	**1L6K.1**	10 g	46,15
		1L6K.2	50 g	169,35
Magnesium powder	≥99,8 %, <75 µm	**CP20.1**	100 g	18,20
		CP20.2	500 g	55,80

Mn

Manganese

Product name	Purity	Art. No.	Pack Qty.	€
Manganese powder	≥99,6 %, <100 mesh	**1HX8.1**	50 g	42,90
		1HX8.2	100 g	69,35
		1HX8.3	250 g	134,40
Manganese flakes	99,98 % (3N8)	**4509.1**	25 g	120,95
		4509.2	50 g	177,40

For additional product data and safety information, see chapter Chemicals A–Z.

Hg

Mercury

Product name	Purity	Art. No.	Pack Qty.	€
Mercury	≥99,9995 %, p.a.	**8530.1**	100 g	n. a.
		8530.2	1 kg	n. a.
	≥99,999 %	**7593.1**	100 g	n. a.
		7593.3	500 g	n. a.
		7593.2	1 kg	n. a.
	≥99,9 %	**7594.2**	100 g	n. a.
		7594.1	1 kg	n. a.

Mo

Molybdenum

Product name	Purity	Art. No.	Pack Qty.	€
Molybdenum pieces	99,98 % (3N8)	**1L4T.1**	10 g	38,60
		1L4T.2	50 g	157,50

Nickel

Product name	Purity	Art. No.	Pack Qty.	€
Nickel foil	99,99 % (4N)	**0529.1**	1 unit(s)	112,35
		0529.2	5 unit(s)	493,45
Nickel powder	99,995 % (4N5)	**5643.1**	25 g	104,20
		5643.2	100 g	328,45
	≥99 %, <63 µm	**CP22.1**	100 g	37,55

Palladium

Product name	Purity	Art. No.	Pack Qty.	€
Palladium powder	99,999 % (5N)	**5648.1**	1 g	335,95

Platinum

Product name	Purity	Art. No.	Pack Qty.	€
Platinum black	98,2–98,7 %	**8408.1**	250 mg	44,65
		8408.2	1 g	155,35
Platinum powder	99,999 % (5N)	**5654.1**	1 g	575,15
Platinum wire	≥99,95 %, Ø 0,2 mm	**0737.1**	25 cm	103,10
		0737.2	50 cm	192,45
		0737.3	1 m	364,45
	≥99,9 %, Ø 0,3 mm	**8415.1**	10 cm	88,05
		8415.2	50 cm	340,25
	≥99,95 %, Ø 0,5 mm	**0803.1**	5 cm	96,25
		0803.2	10 cm	177,40
		0803.3	25 cm	385,95

Selenium

Product name	Purity	Art. No.	Pack Qty.	€
Selenium pellets	99,999 % (5N)	**4547.1**	10 g	64,00
		4547.2	50 g	238,15

For additional product data and safety information, see chapter Chemicals A–Z.

Silver

Product name	Purity	Art. No.	Pack Qty.	€
Silver sheet	100 × 100 × 0,1 mm	**8816.1**	1 unit(s)	92,35
Silver wire	≥99,9 %, Ø 0,1 mm	**8819.1**	350 m	193,50
	≥99,9 %, Ø 0,5 mm	**8821.1**	25 g	222,00
		8821.2	100 g	725,65
Silver pellets	≥99,99 %	**0884.1**	5 g	46,15
		0884.2	10 g	85,90
		0884.3	25 g	193,50
		0884.4	50 g	370,90
Silver wool	≥99,9 %, for elemental analysis	**9373.1**	10 g	106,45

Sodium

Product name	Purity	Art. No.	Pack Qty.	€
Sodium	≥99 %, rods, in paraffin wax oil	**4469.1**	250 g	198,90

Sulphur

Product name	Purity	Art. No.	Pack Qty.	€
Sulphur	≥99,999 %	**4669.1**	10 g	80,10
	≥99,5 %, ground	**9304.1**	1 kg	22,50
		9304.2	5 kg	70,85
		9304.5	25 kg	203,20

Tantalum

Product name	Purity	Art. No.	Pack Qty.	€
Tantalum powder	99,99 % (4N)	**1L6L.1**	5 g	n. a.
		1L6L.2	25 g	n. a.

Auxiliary Reagents

Tellurium

Product name	Purity	Art. No.	Pack Qty.	€
Tellurium pices	99,999 % (5N)	**1L5N.1**	10 g	54,30
		1L5N.2	50 g	169,35

Tin

Product name	Purity	Art. No.	Pack Qty.	€
Tin foil	98 % Sn, 2 % Sb, pure	**1L7Y.1**	250 g	85,50
Tin shot	99,999 % (5N)	**5097.1**	5 g	98,80
		5097.2	10 g	161,80
Tin granules	≥99,8 %, p.a., ~1-4 mm	**4016.2**	50 g	56,90
		4016.1	250 g	209,65
	≥99,9 %, p.a., ~5-12 mm	**1ET2.1**	50 g	58,60
		1ET2.2	100 g	107,00
		1ET2.3	250 g	224,70
Tin beads	≥99,8 %, 8-20 mesh	**2731.1**	50 g	47,85
		2731.2	100 g	87,65

For additional product data and safety information, see chapter Chemicals A–Z.

Titanium

Product name	Purity	Art. No.	Pack Qty.	€
Titanium pieces	99,99 % (4N)	**1L66.1**	10 g	87,65

Tungsten

Product name	Purity	Art. No.	Pack Qty.	€
Tungsten powder	≥99 %, ~325 mesh	**9835.1**	50 g	38,20
		9835.2	100 g	66,55
		9835.3	500 g	274,15

Vanadium

Product name	Purity	Art. No.	Pack Qty.	€
Vanadium powder	99,5 %	**1HT6.1**	5 g	30,00
		1HT6.2	25 g	95,60

Zinc

Product name	Purity	Art. No.	Pack Qty.	€
Zinc shot	99,999 % (5N)	**5345.1**	25 g	61,85
		5345.2	100 g	194,05
Zinc granules	≥99,99 %, p.a., 0,3–1,5 mm	**3093.1**	100 g	41,85
		3093.2	250 g	96,25
		3093.3	500 g	177,40
	≥99,99 %, p.a., 5–15 mm	**AE99.1**	250 g	45,05
		AE99.2	500 g	78,40
		AE99.3	1 kg	134,40
Zinc dust	≥98 %, <63 µm, stabilised	**9524.2**	500 g	37,55
		9524.3	1 kg	55,80
		9524.1	2.5 kg	101,60

Desiccants

Desiccants can absorb water and bind it chemically (reversibly or irreversibly) or physically.
The main desiccants can be subdivided into four categories:

- non-renewable chemical desiccants
- renewable chemical desiccants
- silica gels
- molecular sieves

Non-renewable desiccant

Product name	Purity	Suitable (as desiccant) for	Not suitable (as desiccant) for	Pack.	Art. No.	Pack Qty.	€
Aluminium granulate	≥99 %, ~1–5 mm	Alcohols	-	plastic	**5280.1**	250 g	23,15
					5280.2	1 kg	46,15
Aluminium powder	≥99 %, <160 µm	Alcohols	-	glass	**5285.1**	250 g	37,10
					5285.2	1 kg	99,45
Calcium granulate	≥99,5 %, ~6 mesh	Alcohols	-	glass	**2729.1**	50 g	90,85
Magnesium ribbon	≥99,5 %	Alcohols	-	box	**4468.1**	1 roll(s)	120,95
Magnesium turnings	≥99,9 %, for synthesis, acc. to Grignard	Alcohols	-	tin	**AE61.1**	250 g	21,40
					AE61.2	500 g	34,30
					AE61.3	1 kg	55,80
Magnesium powder	≥99,8 %, <75 µm	Alcohols	-	plastic	**CP20.1**	100 g	18,20
					CP20.2	500 g	55,80
Phosphorus pentoxide	≥99 %, powdered	Neutral and acidic gases, saturated aliphatic and aromatic hydrocarbons, acetylene, anhydrides, nitriles, alkyl and aryl halides, hydrogen sulphide	Alcohols, amines, acids, ketones, ethers, hydrogen chloride, hydrogen fluoride	plastic	**9076.1**	500 g	32,15
					9076.2	1 kg	49,35
					9076.3	2.5 kg	107,00
Potassium hydroxide	≥85 %, p.a., in pellets	Alkaline fluids (e.g. amines)	Acids, esters, amides, phenols	plastic	**6751.3**	250 g	21,00
					6751.1	1 kg	42,50
					6751.4	2.5 kg	85,90
					6751.2	5 kg	160,20
					6751.6	10 kg	289,20
					6751.5	25 kg	579,45
	≥85 %, Ph. Eur., in pellets	Alkaline fluids (e.g. amines)	Acids, esters, amides, phenols	plastic	**P747.1**	500 g	27,85
					P747.2	1 kg	47,20
					P747.6	2.5 kg	95,60
					P747.3	5 kg	177,40

Silica Gels

Silica gels protect moisture sensitive goods or chemicals during storage and transport. They are suitable for drying virtually all gases and solids. Silica gels have a broad spectrum of application in the laboratory and in technical and industrial sectors:

- Possible applications in the laboratory are in desiccators, drying towers and in absorption tubes
- In the industrial sector they are mainly used in drying plants and with various types of packaging
- Are not suitable for drying liquids and alkaline substances

Silica gels with humidity indicator

Silica gel with humidity indicator

Alternative product: environmentally friendly silica gel.

- Patented, organic humidity indicator – **heavy metal free**
- Reversible colour change

Silica gel blue

2–4 mm, with indicator, beads

Drying agent

Silica gel with humidity indicator · Drying pearls blue

Properties:

- Free of cobalt(II) chloride
- Regeneration in drying cabinet at approx. 80–100 °C for approx. 2–4 hours
- Colour change from blue to fuchsia

Filled under protective gas. Change in colour from blue to fuchsia. Regeneration at ca. 80–100 °C, approximately 2–4 hours.

Art. No.	Pack Qty.	Pack.	€
2440.1	500 g	plastic	21,40
Original pack 6 x 500 g			20,33/500 g
2440.2	1 kg	plastic	34,95
Original pack 6 x 1 kg			33,20/1 kg
2440.3	2.5 kg	plastic	70,45
2440.4	10 kg	plastic	233,85

For additional product data and safety information, see chapter Chemicals A–Z.

Silica Gel yellow/blue

2.5–6 mm, with indicator, fractured

Drying agent

Drying pearls yellow/blue · Silica gel with humidity indicator

Properties:

- Regeneration at 120 °C for approx. 4 hours
- Adsorptive capacity: at 90 % rel. humidity approx. 34 wt%
- Colour change from yellow to blue

Filled under protective gas. Change in colour from yellow to blue. Regeneration at max. 120 °C, approx. 4 hours.

Art. No.	Pack Qty.	Pack.	€
3650.1	500 g	plastic	26,35
Original pack 6 x 500 g			25,03/500 g
3650.2	1 kg	plastic	46,15
Original pack 6 x 1 kg			43,84/1 kg
3650.3	2.5 kg	plastic	96,25
3650.4	10 kg	plastic	317,15

For additional product data and safety information, see chapter Chemicals A–Z.

Silica Gel orange/green

2–5 mm, with indicator, beads

Drying agent

Drying pearls orange/green · Silica gel with humidity indicator

Properties:

- Regeneration at max. 110 °C, approximately 3–4 hours
- Adsorptive capacity: at 60 % rel. humidity approx. 35 wt%
- Colour change from orange to green

Filled under protective gas. Change in colour from orange to green. Regeneration at max. 110 °C, approx. 3–4 hours.

Art. No.	Pack Qty.	Pack.	€
1779.1	500 g	plastic	24,65
Original pack 6 x 500 g			23,42/500 g
1779.2	1 kg	plastic	42,90
Original pack 6 x 1 kg			40,76/1 kg
1779.3	2.5 kg	plastic	85,90
1779.4	10 kg	plastic	268,75

For additional product data and safety information, see chapter Chemicals A–Z.

Silica gel orange

2–5 mm, with indicator, beads

Drying agent

Silica gel with humidity indicator · Drying pearls orange

Properties:

- Regeneration at max. 130 °C, approximately 4 hours
- Adsorption capacity: at 80 % relative humidity approx. 40 wt%
- **Colour change from orange to colourless at approx. 6 wt% load**
- Large surface (approx. 750 m^2/g), enables high absorption capacity of steam
- Total adsorption capacity is similar to blue gel (Silica Gel Blue)

Filled under protective gas. Colour change from orange to colourless at approx. 6 weight-% load. Regeneration at 130 °C, approx. 4 hours.

Art. No.	Pack Qty.	Pack.	€
P077.4	500 g	plastic	32,15
Original pack 6 x 500 g			30,54/500 g
P077.1	1 kg	plastic	53,65
Original pack 6 x 1 kg			50,97/1 kg
P077.2	2.5 kg	plastic	107,40
P077.3	10 kg	plastic	332,20

For additional product data and safety information, see chapter Chemicals A–Z.

Silica Gel red/yellow

1–3 mm, with indicator, beads

Drying agent

Drying pearls red/yellow · Silica gel with humidity indicator

Properties:

- Regeneration at 120 °C, approx. 4 hours
- Adsorptive capacity: at 40 % rel. humidity approx. 20 wt%
- Colour change from red to yellow

Filled under protective gas. Change in colour from red to yellow. Regeneration at max. 120 °C, approx. 4 hours.

Art. No.	Pack Qty.	Pack.	€
3955.1	500 g	plastic	24,65
Original pack 6 x 500 g			23,42/500 g
3955.2	1 kg	plastic	42,90
Original pack 6 x 1 kg			40,76/1 kg
3955.3	2.5 kg	plastic	85,90
3955.4	10 kg	plastic	268,75

For additional product data and safety information, see chapter Chemicals A–Z.

Silica Gel red/yellow

3–6 mm, with indicator, beads

Drying agent

Drying pearls red/yellow · Silica gel with humidity indicator

Properties:

- Regeneration at 120 °C, approx. 4 hours
- Adsorptive capacity: at 40 % rel. humidity approx. 20 wt%
- Colour change from red to yellow

Filled under protective gas. Change in colour from red to yellow. Regeneration at max. 120 °C, approx. 4 hours.

Art. No.	Pack Qty.	Pack.	€
4111.1	500 g	plastic	21,40
Original pack 6 x 500 g			20,33/500 g
4111.2	1 kg	plastic	34,95
Original pack 6 x 1 kg			33,20/1 kg
4111.3	2.5 kg	plastic	70,45
4111.4	10 kg	plastic	233,85

For additional product data and safety information, see chapter Chemicals A–Z.

Silica gel Orange – Desiccant Sachet

Desiccant Sachets Silica Gel Orange

Desiccant sachets protect valuable and sensitive goods against dampness.

Properties:

- Manufactured from white long fiber paper
- Filling: Silica Gel Orange
- The different sized bags and different volumes enable multi-purpose application
- Colour change from orange to colourless at 15-20 wt% shows the degree of saturation of the sachet

Application examples

Used in packaging for storage and transport to protect sensitive electronic instruments, equipment, machine parts, chemical products and goods against dampness.

Silica gel orange – Desiccant Sachets

10 g (4 × 9 cm), with indicator

Desiccant sachet made of white long fiber paper with Silica gel orange filling. **Regeneration is not possible.**

WGK 1

Colour change from orange to colourless. Regeneration is not possible.

Art. No.	Pack Qty.	Packaging	€
N077.2	75 unit(s)	10 g sachets (4 x 9 cm)	42,50

Silica gel orange – Desiccant Sachets

25 g (10 × 10 cm), with indicator

Desiccant sachet made of white long fiber paper with Silica gel orange filling. **Regeneration is not possible.**

WGK 1

Colour change from orange to colourless. Regeneration is not possible.

Art. No.	Pack Qty.	Packaging	€
N078.1	30 unit(s)	25 g sachets (10 x 10 cm)	35,40

Silica gel orange – Desiccant Sachets

50 g (9 × 12 cm), with indicator

Desiccant sachet made of white long fiber paper with Silica gel orange filling. **Regeneration is not possible.**

WGK 1

Colour change from orange to colourless. Regeneration is not possible.

Art. No.	Pack Qty.	Packaging	€
N079.1	20 unit(s)	50 g sachets (9 x 12 cm)	50,45

For additional product data and safety information, see chapter Chemicals A–Z.

Regeneration:

Is not possible for the desiccant bags, as the long fiber paper is not temperature-stable.

Silica Gel without colour indicator

- Non toxic
- Regeneration at 130–150 °C; approx. 4 hours
- Easy to handle
- Can be mixed with coloured Silica Gels
- Unproblematic disposal

Silica gel industry grade

broken beads, w/o indicator

Universal drying agent, drying of buildings.

Suitable, for example, for:

- Drying buildings
- Drying carpets and furniture
- And much more

Application:

- Distribute approx. 6-8 kg/m². Caution! Standing water must be removed beforehand
- Keep windows and doors closed. Turn off heating.
- Depending on moisture level, the dry pearls can be removed after approx. 1-10 days
- Control for water absorption: dry 1 kg of moist product in oven for approx. 4 hours at 130-150 °C and weigh subsequently. If the weight difference (=water absorption) is approx. 360 g, the product should be replaced

Regeneration at 130–150 °C.

Art. No.	Pack Qty.	Pack.	€
CN70.1	1 kg	plastic	45,05
Original pack 6 x 1 kg			42,80/1 kg
CN70.2	5 kg	plastic	160,20
CN70.3	10 kg	plastic	299,95
CN70.4	25 kg	plastic	639,65

In order to achieve low residual water content over the silica gel, the capacity can only be utilised partially. The less silica gel is loaded with water the more intensively it dries. For example, to achieve a residual water content of 1 mg/l the loading must not be higher than 5,2 g water / 100 g silica gel.

Silica gel white

0,5–1 mm, granules

Drying agent

SiO_2

Regeneration at ca. 130 °C, approximately 4 hours.

Art. No.	Pack Qty.	Pack.	€
9376.1	1 kg	plastic	46,15
Original pack 6 x 1 kg			43,84/1 kg
9376.2	5 kg	plastic	162,90

Silica gel white

1–3 mm, granules

Drying agent

SiO_2

Regeneration at ca. 130 °C, approximately 4 hours.

Art. No.	Pack Qty.	Pack.	€
T858.1	1 kg	plastic	51,50
Original pack 6 x 1 kg			48,93/1 kg
T858.2	5 kg	plastic	170,95

Silica gel water resistant

2–5 mm, beads

Drying agent water resistant

Properties:

- water resistant
- regeneration at 130–150 °C for approx. 4 hours
- can be mixed with other Silica gels
- protects other Silica gels from liquid water

Regeneration at 130–150 °C.

Art. No.	Pack Qty.	Pack.	€
8109.1	500 g	plastic	33,90
Original pack 6 x 500 g			32,21/500 g
8109.2	1 kg	plastic	53,65
Original pack 6 x 1 kg			50,97/1 kg
8109.3	2.5 kg	plastic	101,60
8109.4	10 kg	plastic	299,95

For additional product data and safety information, see chapter Chemicals A–Z.

Desiccator set DURAN® without porcelain plate

Designed for use up to the maximum technically possible vacuum (0 mbar).

Delivery without porcelain plate, please order separately.

DURAN WHEATON KIMBLE

Desiccator set DURAN® with knob in lid, without connection

DWK Life Sciences.
