ROTI®Change Ion Exchanger

Our product range ROTI®Change contains ion exchanger, which are particularly suitable for analytical purposes. The corresponding polystyrene based resins were specially purified to reduce extractable residues to less than 1 mg/g resin.

Cation exchange resins

Our cation exchange resins are available as 4 % and 8 % divinylbenzene (DVB) cross-linked polymers with sulphonate as active group. All cation exchange resins are provided in hydrogen (H^+) form. Typical applications are: removal of ethidium bromide/propidium iodide from DNA samples; separation and preconcentration of amino acids, peptides and nucleotides; desalting (removal of cations) and separation of metal ions.

Brindi acid
30 %, technical

Brindi resin with hydrochloric acid. Brindi acid is the trade name of a descaler, made on the basis of hydrochloric acid which is inhibited from corrosion. The chemical cleaning of metal surfaces by Brindi acid makes it possible to dissolve deposits consisting of rust, ferric oxide, boiler scale and other acid soluble compounds. The use of Brindi resin as corrosion inhibitor protects the metal surface against the corrosion normally caused by acid.

For application the product has to be diluted with 3 to 6 times the amount of water. Not suitable for aluminium and zinc.

Do not store under 15 °C!
Lower temperatures favour the polymerization to paraformaldehyde. The formaldehyde solution can, however, be used after decanting deposit to a clear solution.
